

ERRATA, VOLUME 15

H. S. Wilf, *The stability of smoothing by least squares*, pp. 933–937.

The value of the limit (8) is incorrect because of unjustifiable interchanges of limiting operations on page 935. The result of Cooke quoted on p. 937 was proved for $p \geq 1$, but used for $p = 0$ also, which requires a separate argument. I am indebted to Professor Lee Lorch for these remarks, who will shortly publish a generalization of the limit (8) as well as the separate argument referred to above.
