Journals Published by the

American Mathematical Society

Proceedings of the American Mathematical Society

The PROCEEDINGS of the American Mathematical Society is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The maximum length of an acceptable paper is about 8 printed pages. (Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.) The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary.

Very short notes (not to exceed 1 printed page) of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. (Items deemed suitable include an elegant new proof of an important and well known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.)

Papers in algebra and number theory should be sent to ARTHUR MATTUCK, Room 2-275, Mathematics Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, or to IRVING REINER, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in modern or classical analysis should be sent to IRVING GLICKSBERG, Mathematics Department, University of Washington, Seattle, Washington 98105, or to W. H. J. FUCHS, White Hall, Cornell University, Ithaca, New York 14850.

Papers in algebraic geometry should be sent to ARTHUR MATTUCK; papers in set-theoretic and general topology to ERNEST MICHAEL, Mathematics Department, University of Washington, Seattle, Washington 98105; in algebraic topology and all other types of geometry to P. EMERY THOMAS, Mathematics Department, University of California, Berkeley, California 94720.

Papers in applied mathematics, differential equations, and related areas of analysis should be sent to WOLFGANG WASOW, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in probability, statistics, and related fields should be sent to JOSHUA CHOVER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in logic, set theory, and related areas should be sent to W. W. BOONE, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

All other communications should be addressed to the Managing Editor, ARTHUR MATTUCK, at the above address.

Inquiries from authors regarding reprints, or changes of addresses for mailing proofs, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

One volume of six issues is planned for 1968. The subscription price is $12.00. Back issues (Vols. 1–18, 1950–1967) are available at the price of $14.00 each.

The American Mathematical Society also publishes the following journals which accept research papers: BULLETIN, TRANSACTIONS and MATHEMATICS OF COMPUTATION. For details and the list of editors, please consult a recent issue. Reviews of the current mathematical literature of the world are published in MATHEMATICAL REVIEWS; editorial correspondence for this journal should be sent to: 416 Fourth Street, Ann Arbor, Michigan 48103.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published bimonthly, in February, April, June, August, October, and December. Price per annual volume is $12.00. Subscriptions, orders for back numbers, and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P. O. Box 6248, Providence, R. I. 02904.

Second-class postage paid at Providence, Rhode Island and additional mailing offices. Authorization is granted under the authority of the act of August 24, 1912, as amended by the act of August 4, 1947 (sec. 34.21, P. L. & R.). Acceptance for mailing at the special rate of postage provided for in section 34.40, paragraph D., P. L. & R.

Contents—*Continued from back cover*

Another generalization of Brouwer's fixed point theorem. By DAVID HENDERSON and G. R. LIVESAY 176
A T_1-complement for the reals. By A. K. STEINER and E. F. STEINER 177
Some comments on the structure of compact decompositions of S^3. By H. W. LAMBERT 180
Tychonoff cubes are coset spaces. By CARL EBERHART 185
Inverse limits of perfectly normal spaces. By HOWARD COOK and BEN FITZPATRICK, JR 189
The Eilenberg-Moore, Rothenberg-Steenrod spectral sequence for K theory. By TED PETRIE 193
Homotopy types of *ANRS*'s. By J. M. KISTER 195
A contact structure for odd dimensional spherical space forms. By J. A. WOLF 196
A problem on partitions connected with Waring's problem. By SHÔ ISEKI 197
On a semiprimary ring. By KWANGIL KOH 205
On some characteristic properties of self-injective rings. By KWANGIL KOH ... 209
The existence of homomorphisms in compact connected Abelian groups. By G. L. ITZKOWITZ 214
Lifting modular representations of finite groups. By BURTON FEIN 217
Commutativity of the invariant differential operators on a symmetric space. By WILLIAM SMOKE 222
Nonsingular rings. By F. L. SANDOMIERSKI 225
Asymptotic diophantine approximations and equivalent numbers. By W. W. ADAMS 231
On the Netto inversion number of a sequence. By DOMINIQUE FOATA 236
Nongenerators of rings. By HOMER BECHTELL 241
On the restrict-induce map of group characters. By D. L. WINTER 246

SHORTER NOTES

A uniqueness theorem for certain two-point boundary value problems. By J. S. W. WONG 249
A note on the Koszul complex. By J. A. EAGON and M. M. FRASER 251
The distance from $U(z) \cdot H^p$ to 1. By D. J. NEWMAN 252
Killing knots. By P. M. RICE 254

GEORGE BANTA COMPANY, INC., MENASHA, WISCONSIN

CONTENTS

Vol. 19, No. 1 FEBRUARY, 1968 Whole No. 109

Page

Symmetrizing kernels and the integral equations of first kind of classical potential theory. By J. L. HOWLAND 1
Permutations by number of rises and successions. By D. P. ROSELLE 8
An abstract oscillation theorem. By KURT KREITH 17
Convexity and minimal Gerschgorin sets. By B. W. LEVINGER 21
On minimal separating collections. By BEZALEL PELEG 26
Imbedding closed Riemann surfaces in C^n. By K. V. RAJESWARA RAO 30
On the strong (L) summability of Fourier series. By B. DEOKINANDAN 33
The Osgood-Taylor-Carathéodory theorem. By M. G. ARSOVE 38
The relation between the sequence-to-sequence and the series-to-series versions of quasi-Hausdorff summability methods. By B. KWEE 45
A note on the characteristic numbers of linear systems of differential-difference equations. By JOHN ABRAMOWICH 50
Generalized eigenfunctions of the Laplace operator and weighted average property. By A. K. BOSE 55
Nth roots of operators. By M. R. EMBRY 63
The functional equation $f(xy)+f(xy^{-1})=2f(x)f(y)$ for groups. By PL. KANNAPPAN 69
Titchmarsh's convolution theorem on groups. By BENJAMIN WEISS 75
Functions whose Fourier series converge for every change of variable. By CASPER GOFFMAN and DANIEL WATERMAN 80
A theorem on intermediate reducibilities. By T. G. MCLAUGHLIN 87
Functions of several self-adjoint operators. By M. E. TAYLOR 91
Complete recursively enumerable sets. By A. H. LACHLAN 99
An effective operator, continuous but not partial recursive. By P. R. YOUNG 103
A Cameron-Martin translation theorem for a Gaussian measure on $C(Y)$. By J. D. KUELBS 109
On three basic results in the theory of stationary point processes. By M. R. LEADBETTER 115
Limit of a sequence of functions with only countably many points of discontinuity. By CHARLES TUCKER 118
The equation $(I-S)g=f$ for shift operators in Hilbert space. By RICHARD ROCHBERG 123
Differentiability almost everywhere of functions of several variables. By G. V. WELLAND 130
Fractional differentiation of functions with lacunary Fourier series. By G. V. WELLAND 135
A property of free Boolean algebras. By ALFRED HORN 142
A Schroeder-Bernstein theorem for projections. By ARNOLD LEBOW 144
On the Fourier inversion theorem for R^1. By IAN RICHARDS 145
Ten axioms for three dimensional Euclidean geometry. By L. G. NOVOA 146
Piercing a disk along a cellular set. By D. R. MCMILLAN, JR 153
The total group of a graph. By MEHDI BEHZAD and HEYDAR RADJAVI 158
The value of J at a Samelson product. By GEORGE MCCARTY 164
On totally paracompact metric spaces. By A. LELEK 168
On bounded domains. By K. SRINIVASACHARYULU 171
On semiconnected mappings of topological spaces. By JOHN JONES, JR 174
