## Proceedings of the American Mathematical Society

The PROCEEDINGS of the American Mathematical Society is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The maximum length of an acceptable paper is about 8 printed pages. (Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.) The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary.

Very short notes (not to exceed 1 printed page) of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. (Items deemed suitable include an elegant new proof of an important and well known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.)

Papers in algebra and number theory should be sent to ARTHUR MATTUCK, Room 2-275, Mathematics Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, or to IRVING REINER, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in modern or classical analysis should be sent to IRVING GLICKSBERG, Mathematics Department, University of Washington, Seattle, Washington 98105, or to W. H. J. FUCHS, White Hall, Cornell University, Ithaca, New York 14850.

Papers in algebraic geometry should be sent to ARTHUR MATTUCK; papers in set-theoretic and general topology to ERNEST MICHAEL, Mathematics Department, University of Washington, Seattle, Washington 98105; in algebraic topology and all other types of geometry to P. EMERY THOMAS, Mathematics Department, University of California, Berkeley, California 94720.

Papers in applied mathematics, differential equations, and related areas of analysis should be sent to WOLFGANG WASOW, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in probability, statistics, and related fields should be sent to JOSHUA CHOVER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in logic, set theory, and related areas should be sent to W. W. BOONE, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

All other communications should be addressed to the Managing Editor, ARTHUR MATTUCK, at the above address.

Inquiries from authors regarding reprints, or changes of addresses for mailing proofs, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

One volume of six issues is planned for 1968. The subscription price is $12.00. Back issues (Vols. 1–18, 1950–1967) are available at the price of $14.00 each.

The American Mathematical Society also publishes the following journals which accept research papers: BULLETIN, TRANSACTIONS and MATHEMATICS OF COMPUTATION. For details and the list of editors, please consult a recent issue. Reviews of the current mathematical literature of the world are published in MATHEMATICAL REVIEWS; editorial correspondence for this journal should be sent to: 416 Fourth Street, Ann Arbor, Michigan 48103.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published bimonthly, in February, April, June, August, October, and December. Price per annual volume is $12.00. Subscriptions, orders for back numbers, and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P. O. Box 6248, Providence, R. I. 02904.

Second-class postage paid at Providence, Rhode Island and additional mailing offices. Authorization is granted under the authority of the act of August 24, 1912, as amended by the act of August 4, 1947 (sec. 34.21, P. L. & R.). Acceptance for mailing at the special rate of postage provided for in section 34.40, paragraph D., P. L. & R.

Contents—*Continued from back cover*

An arc as the inverse limit of a single nowhere strictly monotone bonding map on [0, 1]. By J. W. Rogers, Jr. ... 634
On the metastable homotopy of $O(n)$. By Mark Mahowald ... 639
On the extensive derivative. By R. H. Bowman ... 642
Sufficient conditions for a closed set to lie on the boundary of a 3-cell. By L. D. Loveland ... 649
Sequentially 1-ULC surfaces in $E^3$. By C. E. Burgess and L. D. Loveland ... 653
Whyburn's conjecture for $C^2$ maps. By M. L. Marx ... 660
A change of rings theorem. By L. W. Small ... 662
On finite groups whose $p$-Sylow subgroup is a T.I. set. By H. S. Leonard, Jr. ... 667
A Bol loop isomorphic to all loop isotopes. By D. A. Robinson ... 671
Some remarks on a class of matrix inequalities. By S. G. Williamson ... 673
The distribution of $k$th power residues and nonresidues. By J. H. Jordan ... 678
On a theorem in complete $\mathfrak{A}$-adic rings. By Bernard Kolman ... 681
Laws in nilpotent-by-finite groups. By John Cossey ... 685
A cohomological characterization of finite nilpotent groups. By W. J. Wong ... 689
Simple groups are scarce. By Larry Dornhoff ... 692
Free products of ordered semigroups. By R. E. Johnson ... 697
Totally integrally closed rings. By Edgar Enochs ... 701
On the size of the Brauer group. By Armand Brumer and Michael Rosen ... 707
The open case for simple alternative rings. By M. Slater ... 712
The Base Conversion Theorem. By D. W. Matula ... 716
On principal solutions of linear differential equations. By Steven Bank ... 724
Logarithms of matrices. By B. W. Helton ... 733
A class of linear transformations which can be written as the product of projections. By J. B. Hawkins and W. J. Kammerer ... 739
A compatibility theorem for two point boundary problems. By E. J. Pellicciaro ... 746
A generalized two-point boundary value problem. By J. W. Bebernes and Robert Gaines ... 749
An oscillation criterion for second-order linear differential equations. By W. J. Coles ... 755
On computing the index in three dimensions. By K. R. Meyer ... 760

Shorter Notes

The field of multisymmetric functions. By Arthur Mattuck ... 764
A semishrinking basis which is not shrinking. By J. R. Retherford ... 766

GEORGE BANTA COMPANY, INC., MENASHA, WISCONSIN

# CONTENTS

Vol. 19, No. 3 JUNE, 1968 Whole No. 111

Page

A criterion for $n$-$n$ oscillations in differential equations of order $2n$. By D. B. HINTON ..... 511
A characterization of analyticity. II. By K. O. LELAND ..... 519
On the uniform stability of a perturbed linear functional differential equation. By NELSON ONUCHIC ..... 528
On a class of perturbations of the harmonic oscillator. By PHILIP HARTMAN ..... 533
A remark on the question of uniqueness for the Tricomi problem. By L. M. SIBNER ..... 541
Hadamard products of schlicht functions. By LAWRENCE ZALCMAN ... 544
On an inequality considered by Robertson. By J. A. JENKINS ..... 549
Variation convergence for Bernstein polynomials. By MARTIN PRICE. 551
On extremals of composite variational problems. By D. A. SÁNCHEZ .. 555
Some boundary properties of the Riemann mapping function. By M. G. ARSOVE ..... 560
Measures with separable orbits. By R. LARSEN ..... 569
Semisimplicity of group algebras of vector-valued functions. By D. Z. SPICER ..... 573
A function which is weakly of bounded variation but does not have the Gowurin $\omega$-property. By D. H. TUCKER ..... 578
Rings of continuous functions on open convex subsets of $R^n$. By L. E. PURSELL ..... 581
On a conjecture of DeMarr on partially ordering topological spaces. By R. W. HANSELL ..... 586
On the hyperfinite $II_1$-factor. By SHÔICHIRÔ SAKAI ..... 589
Some irregular distributions modulo 1. By ROBERT KAUFMAN ..... 592
A class of curves on which polynomials approximate efficiently. By D. J. NEWMAN and L. RAYMON ..... 595
On norms of idempotent measures. By SADAHIRO SAEKI ..... 600
Systems of Toeplitz operators on $H^2$. By H. R. POUSSON ..... 603
Some integral formulas for closed hypersurfaces in Euclidean space. By J. K. SHAHIN ..... 609
The bordism class of a quasi-symplectic manifold. By P. S. LANDWEBER ..... 614
Chromatic number of Cartesian sum of two graphs. By KUNG-WEI YANG ..... 617
A note on an example of Stallings. By R. B. SHER ..... 619
Embedding a $p$-sphere in a product of $p$-spheres. By R. Z. GOLDSTEIN. 621
On a point-segment decomposition of $E^3$ defined by McAuley. By L. O. CANNON ..... 624
Some characterizations of the Freudenthal compactification of a semicompact space. By R. F. DICKMAN, JR. ..... 631
