

PROCEEDINGS
OF THE
AMERICAN MATHEMATICAL SOCIETY

EDITED BY

FRED G. BRAUER	ARTHUR MATTUCK
W. H. J. FUCHS	ERNEST A. MICHAEL
IRVING GLICKSBERG	IRVING REINER
P. EMERY THOMAS	

WITH THE COÖPERATION OF

W. W. BOONE	S. M. SHAH
JOSHUA CHOVER	HANS WEINBERGER

VOLUME 22, NUMBER 2
AUGUST, 1969

PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY
PROVIDENCE, RHODE ISLAND

Proceedings of the American Mathematical Society

The PROCEEDINGS of the American Mathematical Society is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The maximum length of an acceptable paper is about 8 printed pages. (Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.) The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary.

The first page should consist of a *descriptive title*, followed by an *abstract* which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). It should be at least one complete sentence, but not over 150 words, with the upper limit primarily for longer papers. The title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. At the end of the article, placed before the first footnote, there should be first the A.M.S. subject classification numbers representing the primary and secondary subjects of the article, followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. A list of subject classification numbers is printed at the end of each volume of Mathematical Reviews. See the June 1969 Notices for more details, as well as illustrative examples.

Very short notes (not to exceed 1 printed page) of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. (Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example of counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.)

Papers in algebra and number theory should be sent to ARTHUR MATTUCK, Room 2-275, Mathematics Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, or to IRVING REINER, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in modern or classical analysis should be sent to IRVING GLICKSBERG, Mathematics Department, University of Washington, Seattle, Washington 98105, or to W. H. J. FUCHS, White Hall, Cornell University, Ithaca, New York 14850.

Papers in algebraic geometry should be sent to ARTHUR MATTUCK; papers in set-theoretic and general topology to ERNEST MICHAEL, Mathematics Department, University of Washington, Seattle, Washington 98105; in algebraic topology and all other types of geometry to P. EMERY THOMAS, Mathematics Department, University of California, Berkeley, California 94720.

Papers in applied mathematics, differential equations, and related areas of analysis should be sent to FRED BRAUER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in probability, statistics, and related fields should be sent to JOSHUA CHOYER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in logic, set theory, and related areas should be sent to W. W. BOONE, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

All other communications should be addressed to the Managing Editor, ARTHUR MATTUCK, at the above address.

Inquiries from authors regarding reprints, or changes of addresses for mailing proofs, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

Four volumes of three issues are planned for 1969. The subscription price is \$80.00 for the four volumes. Back issues of Volumes 1-16 are available at a price of \$14.00 each and Volumes 17-21 at a price of \$18.00 each.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions, orders for back numbers, and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, 321 S. Main St., P. O. Box 6248, Providence, R. I. 02904.
Second-class postage paid at Providence, Rhode Island and additional mailing offices.

Contents—Continued from back cover

An inequality of Schur and an inequality of Newton. By K. V. MENON.	441
Intersection theorems for positive sets. By WOLFHARD HANSEN and VICTOR KLEE.	450
The tower theorem for finite groups. By EUGENE SCHENKMAN.	458
A Krull-Schmidt theorem for infinite sums of modules. By R. B. WARFIELD, JR.	460
On smooth bounded manifolds. By GUDRUN KALMBACH.	466
Independence of a certain axiomatic system. By LINO GUTIERREZ-NOVOA.	470
A note on punctured disks in a 2-manifold. By EDWARD M. BROWN.	471
Riemannian manifolds of constant k -nullity. By AARON ROSENTHAL.	473
A relation between killing tensor fields and negative pinched Riemannian manifolds. By GRIGORIOS TSAGAS.	476
Characterization of connected 2-manifolds without boundary which have finite domain rank. By RICHARD J. TONDRA.	479
Future stability is not generic. By MICHAEL SHUB and R. F. WILLIAMS.	483
A nonoscillation theorem for a nonlinear second order differential equation. By J. W. HEIDEL.	485
An asymptotic expansion for a nonhomogeneous linear system. By THOMAS G. HALLAM.	489
A representation theorem for determining functions. By JOEL D. PINCUS and JAMES ROVNYAK.	498
Characteristic multipliers for some periodic differential equations. By T. G. PROCTOR.	503
Periods of periodic solutions and the Lipschitz constant. By JAMES A. YORKE.	509
Identifying perturbations which preserve asymptotic stability. By AARON STRAUSS and JAMES A. YORKE.	513
Expansion of analytic functions in exponential polynomials. By J. W. LAYMAN.	519
Some recursively unsolvable problems in analysis. By ANDREW ADLER.	523
Nonstandard almost periodic functions on a group. By LAWRENCE D. KUGLER.	527
Unsolvable diophantine problems. By JULIA ROBINSON.	534
A chain of inclusion relations in computable analysis. By OLIVER ABERTH.	539
On a theorem of Orey. By DONALD ORNSTEIN.	549

SHORTER NOTES

On Ramanujan's summation of ${}_1\psi_1(a; b; z)$. By GEORGE E. ANDREWS.	552
Products of two one-parameter subgroups. By MORIKUNI GOTO.	554
Central idempotents in group rings. By D. S. PASSMAN.	555
A metrization theorem for linearly orderable spaces. By DAVID J. LUTZER.	557

CONTENTS

Vol. 22, No. 2

AUGUST, 1969

Whole No. 122

	Page
Riesz matrices that are also Hausdorff matrices. By C. E. HARRELL.....	303
The invariant distance in the theory of pseudoconformal transformations and the Lu Qi-Keng conjecture. By M. SKWARCZYNSKI.....	305
The coefficients of starlike functions. By J. A. HUMMEL.....	311
Absolute summability of a series associated with a Fourier series. By H. P. DIKSHIT.....	316
Sums of functions of bounded index. By WALTER PUGH.....	319
A uniqueness result in conformal mapping. By JAMES A. JENKINS.....	324
About the universal covering of the complement of a complete quadrilateral. By WILHELM STOLL.....	326
Smooth Banach algebras. By I. N. SPATZ.....	328
Isomorphisms generated by fundamental and total sets. By William B. JOHNSON and James A. DYER.....	330
Local uniform convexity of Day's norm on $c_0(\Gamma)$. By JOHN RAINWATER.....	335
On semigroups of operators in locally convex spaces. By FRODE TERKELSEN.....	340
Bounds for holomorphic vector fields. By E. R. FERNHOLZ.....	344
On Hille's first exponential formula. By Z. DITZIAN.....	351
Averages of exponents in factoring integers. By IVAN NIVEN.....	356
A class of flexible nilstable algebras. By WILLIAM G. WITTHOFT.....	361
An identity for the Schur complement of a matrix. By DOUGLAS E. CRABTREE and EMILIE V. HAYNSWORTH.....	364
$(-1, 1)$ rings. By IRVIN ROY HENTZEL.....	367
The free metabelian group of exponent p^2 . By N. D. GUPTA.....	375
On the product of singular symmetric matrices. By LOUIS BRAND....	377
Tangled embeddings of one-dimensional continua. By D. R. McMILLAN, JR. and HARRY ROW.....	378
Cluster sets of nets. By B. J. PETTIS.....	386
Products of k' -spaces. By R. W. BAGLEY and D. D. WEDDINGTON....	392
Tame subsets of spheres in E^3 . By C. E. BURGESS and J. W. CANNON....	395
D -semigroups. By JAMES W. STEPP.....	402
Locally finite and solvable subgroups of sfields. By R. J. FAUDREE....	407
On transitive and fully transitive primary groups. By PAUL HILL....	414
Semihomomorphisms of semimodular lattices. By JOHN L. PFALTZ....	418
A note on generating sets for invertible ideals. By ROBERT GILMER....	426
A note on a paper of Paul Hill and Charles Megibben. By DOYLE O. CUTLER and JOEL WINTHROP.....	428
On projective modules of finite rank. By WOLMER V. VASCONCELOS....	430
A note on products of homogeneous torsion free abelian groups. By ROSS A. BEAUMONT.....	434
Projective and injective objects in the category of Banach spaces. By KENNETH POTHOVEN.....	437
A note on a theorem of B. H. Neumann and S. Yamamuro. By M. BILLIS.....	439
