PROCEEDINGS

OF THE

AMERICAN MATHEMATICAL SOCIETY

EDITED BY

FRED G. BRAUER W. H. J. FUCHS IRVING GLICKSBERG JOSEPH J. ROTMAN

GEORGE B. SELIGMAN ERNEST A. MICHAEL P. EMERY THOMAS

WITH THE COÖPERATION OF W. W. BOONE JOSHUA CHOVER ALLEN SHIELDS

> **VOLUME 24, NUMBER 4 APRIL**, 1970

PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY PROVIDENCE, RHODE ISLAND

Proceedings of the American Mathematical Society

THIS JOURNAL is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

SHORTER NOTES. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

PREPARATION OF THE MANUSCRIPT. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary.

FORM OF MANUSCRIPT. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). It should be at least one complete sentence, but not over 150 words, with the upper limit primarily for longer papers. The title should be short, but informative; useless vague phrases such as "some remarks about" or "concerning" should be avoided. At the end of the article, placed before the first footnote, there should be first the A.M.S. subject classification numbers representing the primary and secondary subjects of the article, followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of subject classification numbers is printed at the end of each volume of Mathematical Reviews. See the June 1969 Notices for more details, as well as illustrative examples.

SUBMISSION OF MANUSCRIPTS. See the last page of the issue.

SUBSCRIPTION INFORMATION. Three volumes of four issues are planned for 1970. The subscription price is \$60.00 for the three volumes. Back issues of Volumes 1–16 are available at a price of \$14.00 each, Volumes 17–19 at a price of \$18.00 each, and Volumes 20–23 at a price of \$30.00 each.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions, orders for back numbers, and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, 321 South Main Street, P.O. Box 6248, Providence, R.I. 02904, Second-class postage paid at Providence, Rhode Island and additional mailing offices.

RESEARCH AND REVIEW JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society

The journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and a department of research announcements.

The current issue of the journal lists editors to whom prospective publications should be addressed. Publication is bimonthly.

Transactions of the American Mathematical Society

This monthly journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than the PROCEEDINGS.

The current issue of the journal lists editors to whom prospective publications should be addressed.

Mathematics of Computation

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields.

In addition it publishes reviews and notes in these and related fields. Prospective publications should be addressed to the Editor, Professor Eugene Isaacson, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012. The author may suggest the name of an editor for review of his paper.

Mathematical Reviews

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Currently publication is monthly; two volumes are published each year, each volume consisting of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Soviet Mathematics—Doklady

This bimonthly is a translation journal containing the entire pure mathematics section of the DOKLADY AKADEMII NAUK SSSR, the Reports of the Academy of Sciences of the USSR. The DOKLADY for a year contains about 500 articles, each about 4 pages long.

Mathematics of the USSR—Izvestija

This journal is a cover-to-cover translation of IZVESTIJA AKADEMII NAUK SSSR SERIJA MATEMATIČESKAJA, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. Starting with Volume 1, Number 1, January-February 1967, which corresponds to the Russian original Tom 31, Number 1, the translation is prepared by the Plenum Publishing Corporation with the cooperation of the American Mathematical Society, and is published bimonthly by the American Mathematical Society.

Mathematics of the USSR—Sbornik

This journal is a cover-to-cover translation of MATEMATIČESKII SBORNIK (New Series), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967, which corresponds to the Russian original Tom 72 (114), No. 1.

Requests for information concerning any of these journals should be addressed to the American Mathematical Society, Box 6248, Providence, Rhode Island 02904. Papers for publication should be sent to an appropriate editor rather than to the Providence Office.

SUBMISSION OF MANUSCRIPT

Send papers directly to one of the authors listed under the subject field of the paper.

Algebra and number theory.

- GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520
- JOSEPH J. ROTMAN, Mathematics Department, University of Illinois, Urbana, Illinois 61801

Modern or classical analysis.

- All other communications should be addressed to the Managing Editor, W. H. J. FUCHS, at the above address.

REPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904.

CONTENTS—Continued from back cover

Addendum to: Some integral characterizations of absolute continuity.	700
By WILLIAM D. L. APPLING.	100
A random L' function with divergent waish series. By DENJAMIN D.	704
WELLS, JR.	194
spectral sets. By KEVIN F. CLANCEY.	797
A closed subspace of D(Ω) which is not an LF-space. By M. J. KASCIC, Jr. and B. ROTH	801
Computable fields and arithmetically definable ordered fields. By A. H.	
LACHLAN and E. W. MADISON	803
A short proof of Curry's normal form theorem. By ROGER HINDLEY	000
and BRUCE LERCHER	808
Oscillation theorems for second order nonlinear differential equations By Lynn Free	811
Periodic solutions for perturbed nonlinear differential equations. By	011
T G PROCTOR	815
The conjugacy function. By WALTER LEIGHTON.	820
Oscillation criteria for nonlinear matrix differential inequalities. By	
C. A. Swanson.	824
On the uniqueness of solutions of certain improperly posed problems.	
By VINCENT G. SIGILLITO.	828
SHORTER NOTES	
Cup product in projective spaces. By KEE YUEN LAM Extending partial permutation matrices. By CHARLES C. LINDNER	832 834

When proper maps are closed. By RICHARD S. PALAIS	835
Robson	837
Erratum, Volume 22 Index to Volume 24	839 840

GEORGE BANTA COMPANY, INC., MENASHA, WISCONSIN

CONTENTS

Vol. 24, No. 4

APRIL, 1970

Whole No. 130

Dage

	T alle
Quasi-projective covers and direct sums. By ANNE KOEHLER	655
A class of non-noetherian domains. By JAMES A. HUCKABA Commutative QF-1 artinian rings are QF. By S. E. DICKSON and K. R.	659
Fuller	667
On a class of completely semisimple inverse semigroups. By MARIO	
Реткісн	671
Extensions of free groups by torsion groups. By PHILLIP GRIFFITH	677
Radical and semisimple classes with specified properties. By W. G.	600
LEAVITT	080
A KAPPAGE and D SOLITAR	688
Asymptotic values of normal light interior functions d used in the unit	000
disk. By I. H. MATHEWS.	691
Positive length but zero analytic capacity. By JOHN GARNETT	696
Zeros of analytic functions with infinitely differentiable boundary	
values. By JAMES G. CAUGHRAN	700
Barbier's theorem in the Lobachevski plane. By JAY P. FILLMORE	705
A classification of immersed knots. By MAX K. AGOSTON	710
An <i>m</i> -orthocomplete orthomodular lattice is <i>m</i> -complete. By SAMUEL	HAC
S. HOLLAND, JR.	710
The deficiency of metagonalic groups By L. W. Wayayay	719
A direct proof that a linearly ordered space is hereditarily collection.	124
wise normal By Lynn A STEEN	727
On the strong law of large numbers. By JOHN SLIVKA and NORMAN C.	121
Severo	729
Markov process representations of general stochastic processes. By	
Dudley Paul Johnson	735
Subgroups of sequences and paths. By B. JAMISON and OREY	739
On slow variation. By GÉRARD LETAC	745
A five sphere decomposition of E^{2n-1} . By DAVID GILLM	747
Metric dimension of complete metric spaces. By GLEN BOOKHOUT.	154
Normanity and properties related to compactness in Moerspaces. By	760
Expansive homeomorphisms on compact manifolds By THOMAS	100
O'BRIEN.	767
R ^c is not almost Lindelöf. By J. H. B. KEMPERMAN nd DOROTHY	
Манакам	772
Operator-valued Feynman integrals of certain finite-dim nsional func-	
tionals. By G. W. JOHNSON and D. L. SKOUG	774
Polynomial approximation on $y = x^{\alpha}$. By E. Passow at L. RAYMON.	781
Generators of S_{α} . By JONATHAN I. GINSBERG	784
