

Report on the 2005–2006 New Doctoral Recipients

This report presents a statistical profile of recipients of doctoral degrees awarded by departments in the mathematical sciences at universities in the United States during the period July 1, 2005, through June 30, 2006. It includes a preliminary analysis of the fall 2006 employment plans of 2005–06 doctoral recipients and a demographic profile summarizing characteristics of citizenship status, sex, and racial/ethnic group. All information came from the departments that awarded the degrees.

Table 1 provides the departmental response rates for the 2006 Survey of New Doctoral Recipients. See page 267 for a description of the groups. No adjustments were made in this report for nonresponding departments.

Table 1: Number of Departments Responding to Doctorates Granted Survey

Group I (Pu)	25 of 25 including	0 with 0 degrees
Group I (Pr)	22 of 23 including	0 with 0 degrees
Group II	52 of 56 including	0 with 0 degrees
Group III	67 of 75 including	11 with 0 degrees
Group IV	60 of 88 including	10 with 0 degrees
Group Va	19 of 21 including	1 with 0 degrees

See "Definitions of the Groups" on page 267.

This preliminary report will be updated in the Second Report of the 2006 Annual Survey using information gathered from the new doctoral recipients. The Second Report will appear in the August 2007 issue of the *Notices* of the AMS.

Changes in the Annual Survey occur over time, and these changes need to be considered when comparing results in this report to those in prior years. Information about changes that occurred in 1997 or later can be found in the First Report for the 2000 Annual Survey in the February 2001 issue of the *Notices* of the AMS.

In this First Report's tables referring to new doctoral recipients, "Fall" refers to results based on information about new doctoral recipients received from departments granting their degrees. This information is gathered in the first fall following the academic year in which the degrees were granted. "Final" refers to results based on supplemental information received from the new doctoral recipients themselves as well as additional new doctoral recipients not reported by departments in time for publication in the First Report. These results are published each August in the Second Report.

Doctoral Degrees Granted in 2005–06

Table 2 shows the number of new doctoral degrees granted by the different doctoral groups

surveyed in the Annual Survey for the past ten years. The 1,245 new doctorates granted by these departments in 2005–06 is an increase of 129 from the fall count for 2004–05, and the highest number of new doctorates ever reported in a First Report. Figure 1 presents the trends in doctorates granted for Groups I (Pu), I (Pr), II, III, and Va combined and Groups I (Pu), I (Pr), and II combined.

The response rates were above 90% for all groups except Groups III and IV. Response rates increased in all groups, except Groups III and IV. Overall, five more departments responded in time for the First Report this year than responded last year.

The number 1,245 of new doctoral recipients is a preliminary count. A final count will appear in the Second Report in the August 2007 issue of the

Table 2: New Doctoral Degrees Awarded by Group, Fall Count

Group	I (Pu)	I (Pr)	II	III	IV	Va	TOTAL
1996–97	297	187	228	132	197	72	1123
1997–98	306	174	264	129	213	77	1163

(Data Reprinted from Table 6B in Third Report, 2005 Annual Survey)

from as many of the nonresponding departments as possible.

From Table 2 we see that all groups, except Group III, showed an increase in the number of doctoral recipients from the previous year, but most of the increase (102) was in Group I (Pu) and Group I (Pr), combined. Group I (Pu) had the largest increase (64) (attaining the highest number of new doctorates reported by this group since 1997–1998 (306)), and Group IV, while reaching an eight-year high, showed the smallest increase (2). Group V had the largest percentage increase (29%).

Table 3 gives historical information about various types of full-time graduate students in Groups I, II, III, and Va combined. These data, gathered in the 2005 Departmental Profile survey, are reprinted from Table 6B of the Third Report of the 2005 Annual Survey (*Notices* of the AMS, December 2006). From this data we can see that total full-time graduate enrollment in the doctoral mathematics groups has been generally increasing since 1999, although it was down in fall 2005. Similarly, the number of first-year full-time graduate students declined in 2005 after steadily increasing since 1998.

The number of full-time graduate students who are U.S. citizens has been increasing since 2002, and the number of non-U.S. citizens has been decreasing since 2003. The number of female full-time graduate students, which had been increasing since 2002, dropped 4% in 2005. The percentage of females among full-time graduate students in the combined mathematics groups has remained relatively stable over the 10-year period shown.

The 2005–06 numbers in Table 2 will be broken down in various ways, such as by sex, in later sections of this report. The names of the 1,245 new doctoral recipients are found on pages 264–82 of this issue of the *Notices*.

Employment Plans of 2005–06 New Doctoral Recipients

Tables 4A, 4B, and 4C each provide a different cross-tabulation of the 1,245 new doctoral recipients in the mathematical

information about these new doctoral recipients, some of which will be discussed in this report. Note that these tables give a breakdown by sex for type of employer, type of degree-granting department, and field of thesis. Keep in mind that the results in this report come from the departments giving the degrees and not from the degree recipients themselves. These tables will be updated using information from the doctoral recipients themselves and will appear in the 2006 Second Report in the August 2007 issue of the *Notices* of the AMS.

The last column (Total) in Table 4A can be used to find the overall unemployment rate. In this and other unemployment calculations in this report, the individuals whose employment status is not known (Unknown (U.S.) and Unknown (non-U.S.)) are first removed, and the unemployment fraction is the number still seeking employment divided by the total number of individuals left after the “Unknowns” are removed. The overall unemployment rate for these data is 4.4%. This figure will be updated later with information gathered from the individual new doctoral recipients. The figure

Figure 2: Percentage of New Doctoral Recipients Unemployed (as reported in the respective Annual Survey Reports 1994–2006)

*To appear in the Second Report.
Note: Prior to 1998–99, the percentages include new doctoral recipients from Group Vb.

Table 5B: Number of New Doctoral Recipients Taking Positions in Business and Industry in the U.S. by Type of Degree-Granting Department, Fall 2002 to Fall 2006

Year	Group						TOTAL
	I (Pu)	I (Pr)	II	III	IV	Va	
Fall 2002	15	12	19	6	56	15	123
Fall 2003	19	13	5	8	45	7	97
Fall 2004	9	13	9	9	50	9	99
Fall 2005	5	9	14	15	64	8	115
Fall 2006	27	14	19	9	80	18	167

for fall 2005 was 7.3%. Figure 2 shows how this unemployment rate compares with other years over the past decade. The unemployment rates, calculated using Table 4B, vary from group to group, with a high of 8.8% for Group Va and lows of 1.6% and 3.8% for Groups IV and II, respectively.

There are 884 new doctoral recipients employed in the U.S. Table 5A gives a breakdown of type of employer by type of degree-granting department for these 884 new doctoral recipients. Of these, 671 (76%) hold academic positions, 46 (5%) are employed by government, and 167 (19%) hold positions in business and industry.

In the First Report for 2004–05, there were 751 new doctoral recipients employed in the U.S., of which 602 (80%) held academic positions, 34 (5%) were in government, and 115 (15%) were in business and industry. The number of new doctoral recipients employed in the U.S. increased in all categories of Table 5A. “Business and Industry” showed the largest increase at 45%, and “Master’s, Bachelor’s and Two-Year Colleges” showed the smallest increase at 1%.

Table 5B shows the number of new doctoral recipients who took positions in business and industry by the type of department granting their degree for fall 2002 to fall 2006. The number of new doctoral recipients taking jobs in business and industry oscillated in the late 1990s, declined during 2001–2003, and has increased for the three consecutive years 2004–2006. The fall 2006

number is up 45% from fall 2005, and the fall 2006 number is 1 less than the fall 2001 number (168). The number of new doctoral recipients taking jobs in government is up 12 (35%) over fall 2005.

Among the 884 new doctoral recipients known to have employment in the U.S. in fall 2006, Group III has the smallest percentage taking jobs in business and industry at 9% and Group IV the highest at 35%.

Table 5C shows the number of new doctoral recipients who took academic positions in the U.S. by type of department granting their degree for fall 2002 to fall 2006. The number of new doctoral recipients taking academic employment in fall 2006 has increased 11%, reaching a 20-year high. Among

Table 5C: Number of New Doctoral Recipients Taking U.S. Academic Positions by Type of Degree-Granting Department, Fall 2002 to Fall 2006

Year	Group						TOTAL
	I (Pu)	I (Pr)	II	III	IV	Va	
Fall 2002	120	83	91	86	92	31	503

TOTAL	522	64	637	22	1245

*Includes those whose status is reported as "unknown" or "still seeking employment".

Table 5D shows the number of positions filled with new doctoral recipients for each type of academic employer. Increases in positions filled by new doctoral recipients were realized by all groups except Groups Va and M&B (combined). The biggest increases in hires of new doctorates into academic positions were hires in Group IV (53% increase) and in Group I(Pr) (50% increase). Hires of new doctorates into positions at research institutes increased 59%, from 22 in 2005 to 35 in 2006.

In fall 2006, 60 new doctoral recipients held positions in the institution that granted their degree, although not necessarily in the same department. This represents 6.8% of new doctoral recipients who are currently employed in the U.S. and 9% of the U.S. academic positions held by new doctoral recipients. In fall 2005 there were 57 such individuals making up 6.5% of the new doctoral recipients who were employed at the time of the First Report. Fourteen new doctoral recipients have taken part-time positions in fall 2006 compared with 23 in fall 2005.

Information about 2005-06 Female New Doctoral Recipients

Tables 4A and 4B give male and female breakdowns of the new doctoral recipients in 2005-06 by Field of Thesis, by Type of Degree-Granting Department, and by Type of Employer.

Overall, 394 (32%) of the 1,245 new doctoral recipients in 2005-06 are female. In 2004-05, 330 (30%) of the new doctoral recipients were female. This percentage varies over the different groups, and these percentages are given in the first row of Table 5E. This year the percentage of females produced is highest again for Group IV at 47%, compared with 44% last year. While Group I (Pr)

Table 6: Sex, Race/Ethnicity, and Citizenship of 2005–06 New Doctoral Recipients

RACIAL/ETHNIC GROUP	MALE					FEMALE					TOTAL
	U.S. CITIZENS	NON-U.S. CITIZENS			Total Male	U.S. CITIZENS	NON-U.S. CITIZENS			Total Female

TOTAL	379	35	427	10	851	143	29	214	8	394	1245

produced the lowest percentage again this year (20%), it is up from last year's percentage of 18%.

The second row of Table 5E gives the percentage of the new doctoral recipients hired who are female for each of the Groups I, II, III, IV, and Va. In addition, 34% of the new doctoral recipients hired in Group M, master's departments, are female; 27% of the new doctoral recipients hired in Group B, bachelor's departments, are female, up from 29% last year. This year, as well as last year, Group IV hired the highest percentage of women (41% this year and 42% last year).

The unemployment rate for female new doctoral recipients is 4.5%, compared to 4.4% for males and 4.4% overall.

The percentage of female new doctoral recipients within fields of thesis ranged from 20% in both algebra/number theory and probability, to 47% in statistics, and 58% in mathematics education.

Later sections in this First Report give more information about the female new doctoral recipients by citizenship and the female new doctoral recipients in Group IV.

Employment Information about 2005–06 New Doctoral Recipients by Citizenship and Type of Employer

Table 5F shows the pattern of employment within employer categories broken down by citizenship status of the new doctoral recipients.

The unemployment rate for the 522 U.S. citizens is 6.4% compared to 5.3% in fall 2005. The unemployment rate for non-U.S. citizens is 2.9%. This varies by type of visa. The unemployment rate for non-U.S. citizens with a permanent visa is 7.1%, while that for non-U.S. citizens with a temporary visa is 2.5%. Among U.S. citizens whose employment status is known, 86% are employed in the U.S. Among non-U.S. citizens with a permanent visa whose employment status is known, 89% have jobs in the U.S. (last year this percentage was 85%), while

the similar percentage for non-U.S. citizens with a temporary visa is 79% (last year the percentage was 72%). The number of non-U.S. citizens having employment in the U.S. is 480, up 13% from 426 last year.

Table 5G is a cross-tabulation of the 884 new doctoral recipients who have employment in the U.S. by citizenship and broad employment categories, using numbers from Table 5F. Of the 884 new doctoral recipients having jobs in the U.S., 46% are U.S. citizens (up from 43% last year). Of the 343 new doctoral recipients who took jobs in U.S. doctoral-granting departments, 43% are U.S. citizens (up from 38% last year). Of the 328 who took other academic positions, 54% are U.S. citizens (up from 51% last year). Of the 213 who took nonacademic positions, 38% are U.S. citizens. Of the 404 U.S. citizens employed in the U.S., 36% have jobs in a doctoral-granting department, 44% are in other academic positions, and 20% are in nonacademic positions. For the 480 non-U.S. citizens employed in the U.S., the analogous percentages are 41%, 32%, and 27% respectively.

Sex, Race/Ethnicity, and Citizenship Status of 2005–06 New Doctoral Recipients

Table 6 presents a breakdown of new doctoral recipients according to sex, racial/ethnic group, and citizenship status. The information reported in this table was obtained in summary form from the departments granting the degrees.

There were 522 (42%) U.S. citizens among the 1,245 new doctoral recipients in 2005–06. Among U.S. citizens, 3 are American Indian or Alaska Native (male), 34 are Asian (21 males and 13 females), 17 are Black or African American (12 males and 5 females), 17 are Hispanic or Latino (12 males and 5 females), 3 are Native Hawaiian or Other Pacific Islander (males), 444 are White (324 males and 120 females), and 4 are Unknown (males). Among non-U.S. citizens, there are 446 Asians, 23 Blacks or

Table 7: U.S. Citizen Doctoral Recipients, Fall Counts

Year	Total Doctorates Granted by U.S. Institutions	Total U.S. Citizen Doctoral Total	%
1980-81	839	567	68%
1985-86	755	386	51%
1990-91	1061	461	43%
1995-96*	1150	493	43%
1999-00	1119	537	48%
2000-01	1008	494	49%
2001-02	948	418	44%
2002-03	1017	489	48%
2003-04	1041	441	42%
2004-05	1116	433	39%
2005-06	1245	522	42%

*Prior to 1998-99, the counts include new doctoral recipients from Group Vb. In addition, prior to 1982-83, the counts include recipients from computer science departments.

African Americans, 41 Hispanics or Latinos, 2 Native Hawaiian or Other Pacific Islander, 197 Whites, and 14 unknown. The total number in each ethnic group was up in 2006 over 2005, as well as the total number of American citizens of each ethnic group; e.g., the number of Black or Afro-American U.S. citizens increased from 14 to 17, and the number of Hispanic or Latino U.S. citizens increased from 12 to 17.

Table 7 (and Figure 3) gives the number of new U.S. doctoral recipients and the number of U.S. citizens back to 1980-81. The 522 U.S. citizen new doctoral recipients is down by 15 (3%) from 1999-00. The percentage of U.S. citizen new doctoral recipients has increased this year to 42% from 39% in fall 2005, while in both years the total number of doctorates granted increased.

Females make up 27% of the 522 U.S. citizens receiving doctoral degrees in the mathematical

Table 8: Sex of U.S. Citizen Doctoral Recipients, Fall Counts

Year	Total U.S. Citizen Doctoral Recipients	Male	Female	% Female
1980-81	567	465	102	18%
1985-86	386	304	82	21%
1990-91	461	349	112	24%
1995-96*	493	377	116	24%
1999-00	537	379	158	29%
2000-01	494	343	151	31%
2001-02	418	291	127	30%
2002-03	489	332	157	32%
2003-04	441	297	144	33%
2004-05	433	313	120	28%
2005-06	522	379	143	27%

*Prior to 1998-99, the counts include new doctoral recipients from Group Vb. In addition, prior to 1982-83, the counts include recipients from computer science departments.

Figure 3: U.S. Citizen Doctoral Recipients

sciences in 2005-06. Last year this percentage was 28%. Among the 723 non-U.S. citizen new doctoral recipients, 35% (251) are female, up from last year's 31%.

Table 8 (and Figure 4) gives the historical record of U.S. citizen new doctoral recipients, broken down by male and female for past years, going back to 1980-81. The number of female U.S. citizen new doctoral recipients is down 15 (9%) from 158 in 1999-00 and down 24% from an all-time high of 187 in 1998-99. Figure 4 also displays the percentage

Figure 4: Females as a Percentage of U.S. Citizen New Doctoral Recipients

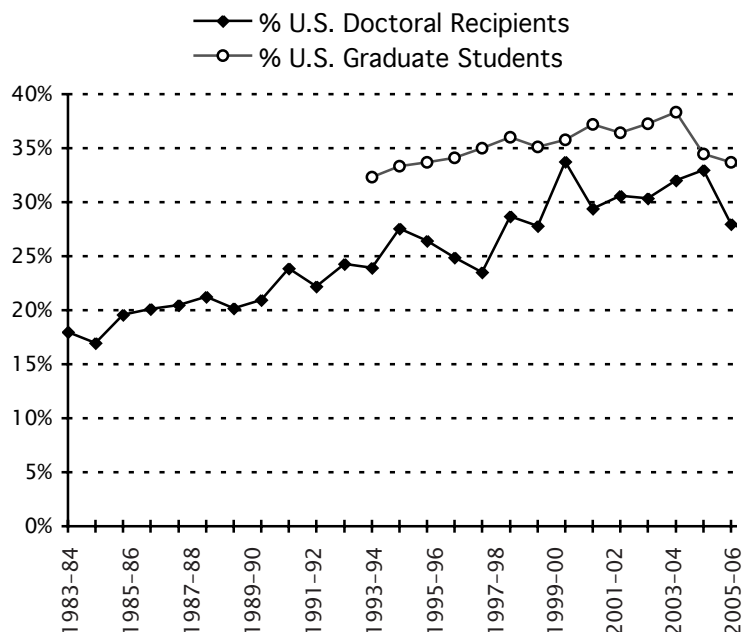

Table 9: Sex and Citizenship of 2005–06 New Doctoral Recipients by Type of Degree Granting Department

CITIZENSHIP	GROUP												TOTAL	
	I (Pu)		I (Pr)		II		III		IV		Va			
	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female
U.S.	112	30	70	19	78	24	36	22	50	34	33	14	379	143
Non-U.S.	121	44	77	18	80	34	55	27	103	100	36	28	472	251
TOTAL	233	74	147	37	158	58	91	49	153	134	69	42	851	394

of females among U.S. citizen (full-time) graduate students beginning in fall 1993. Recent increases in the number of U.S. citizen graduate students (see Table 3) are due to increases in the number of males, hence the declines in the percentage of females.

Table 9 gives a sex and citizenship breakdown of the new doctorates within each of the six groups of doctoral-granting departments. Among all 1,245 new doctoral recipients, 45% of the males and 36% of the females are U.S. citizens. Within the groups the percentage of the new doctoral recipients who are U.S. citizens is lowest in Group IV at 29% and highest in Groups I(Pr) and I(Pu), both at 48%. The number of U.S. citizen new doctoral recipients is lower than the number of non-U.S. citizen new doctoral recipients in all doctoral granting groups for 2005-06, with the exception of females in Group I(Pr).

2005–06 New Doctoral Recipients with Dissertations in Statistics/Biostatistics and Probability

Group IV contains U.S. departments (or programs) of statistics, biostatistics, and biometrics reporting a doctoral program. In the Annual Survey Reports, Group IV is referred to as the Statistics Group. In addition, other groups in the Annual Survey produce new doctoral recipients with dissertations in statistics/biostatistics or probability. The other groups produced 118 new doctoral recipients with dissertations in statistics/biostatistics or probability

in 2005–06 and have averaged 84.2 per year over the ten-year period reported in Table 10. Information about these 118 new doctoral recipients and the 287 new doctoral recipients in Group IV is found in this section of the report.

Table 10 contains information about new doctoral recipients in Group IV as well as those with dissertations in statistics/biostatistics and probability in other groups for this year as well as for the past nine years. The last two rows of Table 10 give a split of the 2005–06 results between the 55 statistics departments and the 33 biostatistics and biometrics departments in Group IV. This year 396 new doctorates had a dissertation in statistics/biostatistics (331) or probability (65), a 6% increase over last year's number. Those with dissertations in statistics/biostatistics and probability accounted for 32% of new doctorates in 2005–06. Quite a bit of the variation in numbers from year to year in Table 10 is due to the changes made in the departments in Group IV over the ten years and to the relatively low response rate for this group. At the time of the Second Report last year, 66 of 87 (75%) of Group IV departments had responded.

Group IV has 88 departments for 2005–06, 13 more than the next largest doctoral group. It contains 30% of all doctoral departments surveyed, and the 60 Group IV departments responding to the Annual Survey reported 287 new doctoral recipients, 23% of all new doctoral recipients in 2005–06.

Table 10: New Doctoral Recipients with Dissertations in Statistics/Biostatistics and Probability

Year	Depts Surveyed	Depts Responding (percent)	New Doctoral Recipients in Group IV				New Doctoral Recipients in Statistics/Biostatistics and Probability				New Doctoral Recipients Hired by Group IV	
			Total	Female (percent)	Jobs in Bus & Ind	Percentage Unemployed	Total	Group IV	Other Groups	Percentage Unemployed	Male	Female
1996–97	81	60 (74%)	197	74 (38%)	70	4.2%	292	187	105	5.1%	24	9
1997–98	82	59 (72%)	213	73 (34%)	70	3.2%	294	199	95	3.7%	25	10
1998–99	91	72 (79%)	243	87 (36%)	57	4.9%	320	240	80	5.8%	29	20
1999–00	89	75 (84%)	284	110 (39%)	79	2.4%	351	278	73	2.0%	24	22
2000–01	86	70 (81%)	237	98 (41%)	59	5.1%	289	221	68	5.3%	27	14
2001–02	86	72 (84%)	222	92 (41%)	56	6.0%	288	221	67	5.4%	31	15
2002–03	86	74 (86%)	239	98 (41%)	45	2.1%	302	234	68	3.3%	20	19
2003–04	87	65 (75%)	243	97 (40%)	50	3.0%	318	241	77	4.0%	48	15
2004–05	87	63 (72%)	285	126 (44%)	64	5.0%	374	283	91	5.0%	26	19
2005–06	88	60 (68%)	287	134 (47%)	80	2.0%	396	278*	118**	2.0%	41	28
Statistics	55	40 (73%)	211	88 (42%)	28	1.0%					29	15
Biostatistics	33	20 (61%)	76	46 (61%)	16	2.0%					12	13

* Of 278, there were 272 in statistics/biostatistics and 6 in probability. For complete details, see Table 4C.

** Of 118, there were 59 in statistics/biostatistics and 59 in probability. For complete details, see Table 4C.

While this is the lowest percentage of responding Group IV departments since 1995–96 when it was 68%, it is the largest number of new doctoral recipients reported since 1999–00, when it was 284. The number of new doctoral recipients in Group IV is up 2 from the number reported at this time last year, while the number of departments responding is down 3 from the number responding by this time last year.

Because of its size, the data from Group IV have a large effect on the results when all doctoral groups are combined. Furthermore, Group IV results are often quite different from those for Groups I (Pu), I (Pr), II, III, and Va. Group IV results can mask important changes in the other doctoral groups. In the following paragraphs some of these differences are presented. The trends noted below have also been observed in past reports.

Group IV is producing a larger percentage of female doctorates than the other doctoral groups. Table 9 shows that for the Group IV new doctoral recipients, 134 of 287 (47%) are female, while 260 of 958 (27%) are female in the other doctoral groups. Among U.S. citizens, females accounted for 34 of the 84 (40%) Group IV new doctoral recipients, while for the other groups 109 of 438 (25%) were female. Overall, 143 of 522 (27%) U.S. citizen new doctoral recipients were female.

Group IV is producing a smaller percentage of U.S. citizen new doctorates than the other doctoral groups. In Group IV, 84 of 287 (29%) new doctoral recipients are U.S. citizens, while in other groups 438 of 958 (46%) are U.S. citizens. In Group IV, 100 (75%) of the 134 females were not U.S. citizens.

Group IV doctorates are more likely to take jobs in business and industry than those in other doctoral groups. Of the 230 new doctoral recipients from Group IV who found employment in the U.S., 80 (35%) took jobs in business or industry. From the other groups, 654 new doctoral recipients found employment in the U.S., of which 87 (13%) took jobs in business or industry.

Group IV doctorates have a lower unemployment rate than the other doctoral groups. The employment status for 249 Group IV new doctoral recipients is known, and 4 (1.6%) are unemployed. For the other groups, the employment status of 817 is known, and 43 (5.3%) are unemployed. Group IV is hiring a bigger percentage of females than the other doctoral groups. Twenty-eight of 69 (41%) new doctoral recipients hired by Group IV departments were female, down from last year's 42%, the lowest percentage of female hires reported since 1999–2000. The other doctoral groups reported that 65 of 274 (24%) new doctoral recipients hired were female, up from last year's 22%.

Group IV had 278 new doctoral recipients with fields of thesis in statistics/biostatistics (272) and

probability (6), and the other doctoral departments had 118 with fields of thesis in statistics/biostatistics (59) and probability (59) (last year the other doctoral departments had 65 new doctorates in statistics and 26 in probability). The distribution of these degrees among the various groups can be found in Table 4C. The number of new doctoral recipients with theses in statistics/biostatistics and probability (396) is substantially larger than any other field, with algebra and number theory next with 184.
