The number of full-time positions under recruitment in mathematics departments increased during the 2010–2011 academic recruitment cycle. The total number of positions under recruitment by all mathematics departments combined was 1,567. This number is up 45% from the 2009–2010 total and up 7% from the 2008–2009 total. (Note: Throughout this report, the term tenure-track encompasses positions that come with tenure as well as those which provide the option of earning tenure at some point after appointment.)

The doctoral statistics and biostatistics departments, Group IV, also saw an increase (22%) in the level of recruitment, though not as precipitous an increase as for the mathematics departments. Group IV consists of 93 departments and so constitutes a much smaller employment pool than the approximately 1,400 mathematics departments. In 2010 there were approximately 1,860 full-time faculty in Group IV compared to approximately 23,023 full-time faculty in all mathematics departments combined.

James W. Maxwell is AMS associate executive director for special projects. Colleen A. Rose is AMS survey analyst.
The percentage increase in positions under recruitment varied significantly among the various reporting groups within the combined mathematics departments. There was a 34% increase for the doctoral mathematics departments combined, a 63% increase for masters mathematics departments (Group M) and a 51% increase for bachelors mathematics departments (Group B). Similarly, the increases in tenure-track positions under recruitment for these same department groupings were 20%, 27%, and 25%, respectively.

A total of 1,290 positions were filled during the 2010–2011 academic cycle for employment beginning in fall 2011 by all mathematics departments combined. This total is up 34% from the 2009–2010 total and up 1% from the 2008–2009 total.
The situation for doctoral statistics departments and biostatistics departments combined was much the same, as demonstrated by the accompanying figure. The total of filled positions, is up 21% from the 2009–2010 total and up 15% from the 2008–2009 total.

The increase in positions filled for fall 2011 also varied widely among the various reporting groups within all mathematics departments. For the doctoral mathematics departments combined, the number of positions filled was 606, an increase of 32% from the fall 2010 and fall 2009 counts. For Group M the count was 178, up 32% from fall 2010 and up 17% from the fall 2009 count. For Group B the count was 506, up 38% from fall 2010 and down 24% from fall 2009.
Positions Filled

The total tenure-track positions filled during the 2010-2011 academic cycle by all mathematics departments combined was 623, up 30% from the 2009-2010 total of 479. This total is down 12% from the 2008-2009 figure of 710 and down 36% from the 2007-2008 total of 978 (the ten year high).

Faculty Attrition

Figure A.1 shows the trends in attrition from deaths and retirements among the full-time faculty for the academic years 1994–1995 through 2010–2011. In the late 1990s attrition leveled off, then began dropping after 2000, reaching the smallest rate of attrition in 2009–2010.

- Group Va reported the smallest rate of attrition, 0.2%
- Group I Pub reported the highest rate of attrition, 2.5%
- Group II reported the largest percentage increase in attrition at 2.4% up from 1.1% last year.
Faculty Attrition

Figure A.2 shows an alternative way of looking at the trends in annual faculty retirements compared to that offered in Figure A.1. It seems highly likely that the vast majority of individuals who are reported by their department as retiring are, in fact, members of the tenured faculty. Given that, it makes sense to look at the ratio of those retiring during an academic year to the total tenured faculty at the start of that year, as is done in A.2. Data collected for the first time during the 2011 Annual Survey confirmed that over 90% of those retiring where tenured. For 2011, the percentage of tenured faculty that retired from Groups I-Va was 3.3; among Groups M & B this percentage was 3.4.

Other Information

The interested reader may view additional details on the results of this survey and prior year trends by visiting the AMS website at www.ams.org/annual-survey. Survey results for the doctoral departments in statistics and biostatistics are available there.

* Departments and programs that do not formally "house" faculty and their salaries are excluded from this survey.

Group Descriptions

Group I is composed of 48 departments with scores in the 3.00–5.00 range. Group I Public and Group I Private are Group I departments at public institutions and private institutions, respectively.

Group II is composed of 56 departments with scores in the 2.00–2.99 range.

Group III contains the remaining U.S. departments reporting a doctoral program, including a number of departments not included in the 1995 ranking of program faculty.

Group IV contains U.S. departments (or programs) of statistics, biostatistics, and biometrics reporting a doctoral program.

Group V contains U.S. departments (or programs) in applied mathematics/applied science, operations research, and management science that report a doctoral program.

Group Va is applied mathematics/applied science; Group Vb, which was no longer surveyed as of 1998–99, was operations research and management science.

Group M contains U.S. departments granting a master’s degree as the highest graduate degree.

Group B contains U.S. departments granting a baccalaureate degree only.

Listings of the actual departments which compose these groups are available on the AMS website at www.ams.org/annual-survey/groups_desc.
