# Report on the 2017-2018 New Doctorate Recipients 

## Amanda L. Golbeck, Thomas H. Barr, and Colleen A. Rose

This report presents a statistical profile of recipients of doctoral degrees awarded by departments in the mathematical sciences at universities in the United States during the period July 1, 2017 through June 30, 2018. Information in this report was provided by 293 of the 324 doctorate-granting departments surveyed, with additional information provided by the individual degree recipients.

The Report on the 2017-2018 Employment Experiences of the New Doctoral Recipients immediately following this report provides an analysis of the fall 2018 employment plans of the 390 PhD recipients who responded to this survey, as well as a summary of their demographic characteristics.

The document containing these two reports along with the tables on which they are based is referenced here by [1], and it is available on the AMS website at www.ams .org/annual-survey.

## Overall Characteristics of the 2017-2018 Cohort

In mathematical and statistical sciences, $1,960 \mathrm{PhDs}$ were awarded by the responding departments (293); 20 of these departments awarded no doctorates. Figure A. 1 gives a breakdown of degree counts by department grouping. This overall count is essentially unchanged from that for the 2016-17 cohort, and the percentages are the same as well. Figure A. 2 shows a breakdown of PhD production by mathematical and statistical sciences groups over the years from 2003-04 to 2017-18. Compared, for instance, with the 2007-08 cohort, the combined number of PhDs in 2017-18 is about $42 \%$ higher, which translates to an approximate $3.6 \%$ year-over-year increase on average.

Dissertation titles are identified by the Mathematics Subject Classification System [2] and then grouped into one of thirteen broad categories (Algebra and Number Theory;

Real, Complex, Functional, and Harmonic Analysis; Geometry and Topology; Discrete Mathematics, Combinatorics, Logic, and Computer Science; Probability; Statistics; Biostatistics; Applied Mathematics; Numerical Analysis and Approximation; Linear and Nonlinear Optimization and Control; Differential, Integral, and Difference Equations; Mathematics Education; Other/Unknown). The highest percentage, $32 \%$ (622), of the new PhDs had a dissertation in either Statistics or Biostatistics, followed by Algebra and Number Theory with $14 \%$ (269) and Applied Mathematics with $14 \%$ (265). Further details can be found in Table A. 1 in [1].

Figure A.1. Number and Percentage of Degrees Awarded by Department Grouping* Total Degrees Awarded: 1,960

## Math Public Large, 402, 21\%

Math Public Medium, 361, 18\%

## Math Public Small, 249, 13\%

Math Private Large, 225, 11\%
Math Private Small, 73, 4\%
Applied Math, 158, 8\%
Statistics, 321, 16\%
Biostatistics, 171, $9 \%$
*See page 1206 for a description of the department groupings.

[^0]Figure A.2. New PhDs Awarded by Group

## Employment

The employment status as of late 2018 was known for 1,696 of the 1,960 doctoral recipients. Figure E. 1 gives a percentage breakdown by employment locale and seeking status. Figure E. 2 shows the overall percentages of these PhDs reporting employment in various job sectors, and Figure E. 3 provides a breakdown of the same information by citizenship.

Of the US citizens whose employment status is known, $86 \%(714)$ are employed in the US, and of these:

- $31 \%$ are employed in PhD-granting departments.
- $36 \%$ are employed in all other academic categories.
- $33 \%$ are employed in government, business and industry.

About 30\% of the 2017-18 PhDs were in postdoc positions, which marks a decrease of about 3 percentage
points from 2016-17. Most were in doctorate-granting departments, and their distribution is shown in Figure E.4. The counts of postdocs in various job sectors are shown in Figure E.5, broken down by citizenship. Of the PhDs in US academic jobs, $51 \%$ were postdocs.

Figure E. 6 tracks the overall and women's unemployment of new PhDs over a ten-year period. These rates have tended to parallel each other; in all but two of these years, the unemployment rate has been slightly lower for women. The highest unemployment rate in 2017-18 was reported in the Math Private Small (11\%) group, and the lowest was about $3 \%$ in the Statistics group.

Full details regarding employment outcomes are contained in Tables F.1-F. 3 and E.1-E. 11 in [1].

## Demographics

Gender and citizenship were known for all 1,960 new PhDs reported for 2017-18. Figure D. 1 gives a breakdown by departmental grouping of the recipients' gender, and Figure D. 2 provides the same categorical breakdown by citizenship. Overall, $48 \%$ (935) of recipients were US citizens, $29 \%$ (567) were women, and $8 \%$ (79) were members of underrepresented minority groups. Figure D. 3 shows the gender breakdown of the US citizens, and Figure D. 4 shows the overall size of the PhD cohort and citizenship breakdown for 2017-18 and the preceding five years.

Here are a few other features of the 2017-18 data:

- In all math groups except Math Private Large and Applied Math, more than half of the PhD recipients were US citizens.
- In the Statistics groups, 35\% of the new PhDs were US citizens.
- $50 \%$ of those identifying as men and $42 \%$ of those identifying as women were US citizens.
- Among the US citizens earning PhDs, 6 were American Indian or Alaska Native, 81 were Asian, 27 were Black or African American, 34 were Hispanic or Latino, 2 were Native Hawaiian or Other Pacific Islander, 754 were White, and 31 were of unknown race/ethnicity.

Further details on the overall demographics of the 2017-18 cohort are in Tables D.1-D. 4 in [1].

| Biostatistics | 92 | 19 | 7 |
| Total | 567 | 113 | 21 |

Figure F.2.Women as a Percentage of US Citizen Doctoral Recipients and Graduate Students

## Women Doctorates

Overall, 29\% of doctorate recipients were women, the same as for 2016-17. Of the $1,017 \mathrm{PhDs}$ taking academic jobs, $28 \%$ (284) were women. Both of these percentages have decreased from their common high of $32 \%$ in 2014.

Figure F. 1 gives some insight into which groups tend to hire their own women graduates. For example, the graph shows that in Math Public Small departments, women constituted $32 \%$ of PhDs produced, $19 \%$ of faculty hired in this group were women from this group, and overall 4\% of women produced by this group were hired in this group.

Figure F. 2 focuses on the percentage, over time, of US-citizen PhDs and graduate students who are women. It is notable that the percentage of women graduate students (tracked in the Departmental Profile reports of the Annual

Survey) in the seven years leading up to 2017-18 has been steady at about $30 \%$, whereas the percent of US citizen PhD recipients who are women has generally declined in this period.

Tables D.1, D.3, and F.1 in [1] provide further details.

## Statistics/Biostatistics Doctorates

Eighty-nine departments in the Statistics groups (50 of 60 Statistics and 39 of 46 Biostatistics) responded to this survey. They produced 492 doctorates, most of whom had dissertations in statistics or biostatistics (a few were in such areas as probability and applied math), 75 fewer than in 2016-17. Figures S. 1 through S. 5 give breakdowns of these numbers by gender, citizenship, and employment status. In addition, departments in the Mathematics groups produced 141 PhDs with dissertations in statistics or biostatistics.

Figure S.1. PhDs Awarded by
Statistics/Biostatistics Departments ( $\mathrm{n}=492$ )

Figure S.2. Gender of PhD Recipients from Statistics/Biostatistics Departments ( $\mathrm{n}=492$ )

Figure S.3. Citizenship of PhD Recipients from Statistics/Biostatistics Departments ( $\mathrm{n}=492$ )

Unknown Citize 2, <.5\%

Figure S.4. Employment Status of PhD Recipients from Statistics/Biostatistics Departments ( $\mathrm{n}=492$ )

Figure S.5. US-Employed PhD Recipients from Statistics/Biostatistics Departments byType of Employer ( $\mathrm{n}=407$ )

[^1]So the overall number of PhDs specializing in statistical sciences for 2017-18, across all types of departments, was 622 , or $32 \%$ of the total. Table A. 1 in [1] provides details.

Here are some attributes of the 2017-18 PhDs produced by departments in the Statistics groups:

- These doctorates constituted $25 \%$ of all those in mathematical sciences.
- $37 \%$ of those in Statistics and 54\% in Biostatistics were women.
- $40 \%$ of the US citizens were women.
- The unemployment rate of $2.7 \%$ is about half the corresponding percentage among Math PhDs.
- $42 \%$ of those hired by Stat/Biostat departments were women.

Tables A.1, D.1-D.5, F.1-F.3, and E.1-E. 11 in [1] include more details about PhDs in the Statistics groups.

## Departmental Groupings

In this report, Mathematical and Statistical Sciences departments are those in four-year institutions in the US that refer to themselves with a name that incorporates (with a few exceptions) "Mathematics" or "Statistics" in some form. For instance, the term includes, but is not limited to, departments of "Mathematics," "Mathematical Sciences," "Mathematics and Statistics," "Mathematics and Computer Science," "Applied Mathematics," "Statistics," and "Biostatistics." Also, Mathematics (Math) refers to departments that (with exceptions) have "Mathematics" in the name; Stat/Biostat refers to departments that incorporate (again, with exceptions) "Statistics" or "Biostatistics" in the name but do not use "Mathematics."

## ANNUAL SURVEY

Listings of the actual departments that comprise these groups are available on the AMS website at www. ams.org /annual-survey/groupings.

| A department is in <br> Group... | ...when its subject area, <br> highest degree offered, and <br> PhD production rate $\boldsymbol{p}$ |
| :--- | :--- |
| Math Public Large | Math PhD, $7.0 \leq p$ |
| Math Public Medium | Math PhD, $3.9 \leq p<7.0$ |
| Math Public Small | Math PhD, $p<3.9$ |
| Math Private Large | Math PhD, 3.9 $\leq p$ |
| Math Private Small | Math PhD, $p<3.9$ |
| Applied Math | Applied mathematics, PhD |
| Statistics | Statistics, PhD |
| Biostatistics | Biostatistics, PhD |
| Masters | Math, masters |
| Bachelors | Math, bachelors |
| Doctoral Math |  <br> Applied Math |
| Stat/Biostat or Stats | Statistics \& Biostatistics |
| Math |  <br> Biostatistics |

## Department Response Rates by Grouping

| Group | Received |
| :--- | :--- |
| Math Public Large: | 26 of 26 including 0 with no degrees |
| Math Public Medium: 39 of 40 including 0 with no degrees |  |
| Math Public Small: | 62 of 70 including 9 with no degrees |
| Math Private Large: | 24 of 24 including 0 with no degrees |
| Math Private Small: | 24 of 28 including 2 with no degrees |
| Applied Math: | 28 of 30 including 2 with no degrees |
| Statistics: | 51 of 60 including 1 with no degrees |
| Biostatistics: | 39 of 46 including 6 with no degrees |
| Total: | 293 of 324 including 20 with no degrees |

As of press time for this issue of Notices, the following departments had not responded to the survey. Therefore, any PhDs which may have been awarded by these departments are not included in this report.

## Mathematics Departments

Clarkson University
Dartmouth College
Illinois State University
Jackson State University
Mississippi State University
Montclair State University
University of Alabama at Birmingham
University of California, Santa Cruz
University of Denver
University of Missouri-Kansas City

University of Pennsylvania
University of Puerto Rico, Mayaguez
Wright State University, Dayton
Yeshiva University

## Statistics Departments

George Washington University
Harvard University
Michigan State University
North Dakota State University, Fargo
Southern Methodist University
University of Alabama-Tuscaloosa
University of Arizona
University of California, Irvine
University of Virginia

## Biostatistics Departments

Case Western Reserve University
Saint Louis University College for Public Health \& Social Justice
University of Arizona, Mel \& Enid Zuckerman College of Public Health
University of Cincinnati, Medical College
University of Illinois at Chicago
University of South Carolina
University of Texas-School of Public Health

## Acknowledgments

The Annual Survey attempts to provide an accurate appraisal and analysis of various aspects of the academic mathematical sciences scene for the use and benefit of the community and for filling the information needs of the supporting organizations. Every year, college and university departments in the United States are invited to respond, and the Annual Survey relies heavily on the conscientious efforts of the dedicated staff members of these departments. On behalf of the Joint Data Committee and the Annual Survey Staff, we thank the many secretarial and administrative staff in the departments for their cooperation and assistance in responding to the survey questionnaires.

The Annual Survey is co-sponsored by the American Mathematical Society (AMS), American Statistical Association (ASA), Institute for Mathematical Statistics (IMS), Mathematical Association of America (MAA), and Society for Industrial and Applied Mathematics (SIAM).

# Report on the 2017-2018 Employment Experiences of the New Doctoral Recipients 

Amanda L. Golbeck, Thomas H. Barr, and Colleen A. Rose

This report focuses on information that comes from the Employment Experiences of New Doctorate Recipients (EENDR) survey of individual PhD recipients regarding their experiences in finding and beginning new jobs. The survey was sent to the 1,487 new PhDs for whom departments provided contact information, and responses were collected during the period July 2017 to October 2018. Three hundred ninety ( $26 \%$ ) responded. Some of the demographic features of the respondents to the EENDR are similar to those of the overall group on which the New Doctorates report is based. For instance, of the 390, 28\% were women (29\% overall), 65\% were US citizens (48\% overall), $14 \%$ were employed outside the US ( $10 \%$ overall), and $4 \%$ were members of underrepresented minority groups (8\% overall).

Figure EE. 1 shows a breakdown by sector of EENDR respondents working in permanent jobs in the US in the broad sectors of academia, business and industry, and government; Figure EE. 2 gives the same breakdown for
those in temporary jobs. All but $2 \%$ of these jobs are full-time. When combined, the information in these two figures can be compared with that in Figure E. 2 in the New Doctorates report:

| Employment Sector | EENDR Overall <br> $\%$ US Employed <br> $(\mathrm{n}=325)$ | DR Overall <br> \% US Employed <br> $(\mathrm{n}=1,486)$ |
| :--- | :---: | :---: |
| Academia | $73 \%$ | $61 \%$ |
| Government | $6 \%$ | $6 \%$ |
| Business \& Industry | $21 \%$ | $34 \%$ |

This comparison suggests that 2017-2018 EENDR responses are somewhat biased toward those employed in academia, and thus any conclusions about the entire group of new PhDs based on EENDR responses alone should be made with this qualification. The similarities here suggest that estimates based on the EENDR data (e.g., median starting salaries) may not be wildly different from the actual values

Figure EE.1. EENDR Respondents Reporting Permanent US Employment by Sector ( $\mathrm{n}=162$ )

Figure EE.2. EENDR Respondents
ReportingTemporary US Employment by Sector ( $\mathrm{n}=163$ )

Figure EE.3. EENDR Respondents Employed Outside the US by Sector ( $\mathrm{n}=53$ ) Business \& Industry

* Includes research institutes and other non-profits.

| Fall 2015 | 357 | 51\% | 341 | 49\% | 160 | 47\% | 258 | 76\% | 102 | 40\% | 0 |
| Fall 2016 | 323 | 52\% | 298 | 48\% | 136 | 46\% | 214 | 72\% | 82 | 38\% | 2 (<1\%) |
| Fall 2017 | 268 | 49\% | 276 | 51\% | 134 | 49\% | 209 | 76\% | 147 | 70\% | 5 (1\%) |
| Fall 2018 | 162 | 50\% | 163 | 50\% | 73 | 45\% | 123 | 75\% | 88 | 72\% | 5 (1\%) |

Table EE.2. Percentage of EENDR Respondents Employed in the US by Employment Sector within Job Status

| Year | Permanent |  |  | Temporary |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Acad | Govn | B/I | Acad | Govn | B/I |
| Fall 2014 | $54 \%$ | $6 \%$ | $40 \%$ | $92 \%$ | $5 \%$ | $3 \%$ |
| Fall 2015 | $44 \%$ | $8 \%$ | $48 \%$ | $93 \%$ | $3 \%$ | $4 \%$ |
| Fall 2016 | $47 \%$ | $7 \%$ | $46 \%$ | $93 \%$ | $5 \%$ | $3 \%$ |
| Fall 2017 | $51 \%$ | $8 \%$ | $41 \%$ | $92 \%$ | $5 \%$ | $2 \%$ |
| Fall 2018 | $52 \%$ | $7 \%$ | $41 \%$ | $94 \%$ | $4 \%$ | $2 \%$ |

for all of the new PhDs, but the reader should keep these differences in mind.

Table EE. 1 gives a longitudinal comparison of responses, and the 2018 percentage of $76 \%$ is the modal value. Also, in 2018, of those in postdocs, $72 \%$ hold that position because a permanent job was not available. Here are a few features to note:

- $50 \%$ of those employed in the US for fall 2018 were in permanent positions.
- The percentage of those in temporary jobs because a permanent one was not available has ranged between $43 \%$ and $49 \%$ in the years 2014 to 2018, and the 2018 value of $45 \%$ is in line with these percentages.
- The percentage of those in temporary jobs who are postdocs has remained consistent over this five-year period, and the 2018 percentage of $76 \%$ is the modal value. Also in 2018, of those in postdocs, $72 \%$ hold that position because a permanent job was not available.
Table EE. 2 compares percentages of PhDs taking employment in various sectors, by job durability. Over the five years shown, the percentages in all of these categories have remained remarkably stable.

Figures EE.5, EE.6, and EE. 7 show breakdowns of employment in the broad sectors of education, government, and business and industry.

Figure EE.5. Employment by Type of Educational Institution (Educ) ( $\mathrm{n}=262$ )

*Includes research institutes and other non-profits.

Figure EE.6. Employment by Type of Government (Gov) ( $\mathrm{n}=18$ )

Figure EE.7. Employment by Type of Business/Industry (BI) ( $\mathrm{n}=121$ )

* Includes Biotechnology (2), Consumer Merchandising (3), Energy (3), Self-employed/Other (5), and Survey/ Market Research (1).

Figure EE.8. Age Distribution of
New PhD Respondents
( $\mathrm{n}=366$ )

## Starting Salaries

Starting salary figures were provided by 332 of the 390 respondents to the EENDR survey. Responses with insufficient data or from individuals who indicated they had part-time or non-US employment were excluded. Numbers of usable responses for each salary category are reported in the tables on page 1210.

Readers are warned that the data in this report are obtained from a self-selected sample, and inferences from them may not be representative of the full population.

Key to Tables and Graphs. Salaries are those reported for the fall immediately following the survey cycle. Years listed denote the survey cycle in which the doctorate was received-for example, survey cycle July 1, 2017-June 30, 2018 is designated as 2018. Salaries reported as $9-10$ months exclude stipends from summer grants, teaching, or the equivalent. M and W are men and women, respectively. Separate figures are not provided when the number of salaries available for analysis in a particular category was five or fewer. All categories of "Teaching/Teaching and Research" and "Research Only" contain those recipients employed at academic institutions only.

The graphs show standard box plots summarizing salary distribution information for the years 2011 through 2018. Values plotted for 2011 through 2018 are converted to 2018 dollars using the implicit price deflator prepared annually by the Bureau of Economic Analysis, US Department of Commerce [https://www. bea.gov]. The category for each graph is based on a work activity reported in the EENDR. Salaries of postdocs are shown separately. They are also included in other academic categories with matching work activities.

Figure EE.9. Responses to EENDR Ethnicity Question ( $\mathrm{n}=325$ )
\# Hispanic/Latino \# Unknown

* No new PhDs employed by statistics or biostatistics departments identified as Hispanic/Latino.

For each box plot the box shows the first quartile (Q1), the median (M), and the third quartile (Q3). Upper whiskers extend from Q3 to the largest data value below Q3+1.5 x IQR, and lower whiskers from Q1 down to the smallest data value above Q1-1.5 x IQR, where $\mathrm{IQR}=\mathrm{Q} 3-\mathrm{Q} 1$ is the interquartile range. Data points falling between Q3+1.5 $x$ IQR and Q3+3x IQR or Q1-1.5 x IQR and Q1-3x IQR are designated as outliers and plotted as circles $\left({ }^{\circ}\right)$. Data outside the range Q1-3 x IQR to Q3+3x IQR are designated as extreme outliers and plotted as stars (*).

## Acknowledgments

The Annual Survey attempts to provide an accurate appraisal and analysis of various aspects of the academic mathematical sciences scene for the use and benefit of the community and for filling the information needs of the professional organizations. Every year, college and university departments in the United States are invited to respond. The Annual Survey relies heavily on the conscientious efforts of the dedicated staff members of these departments for the quality of its information. On behalf of the Data Committee and the Annual Survey Staff, we thank the many secretarial and administrative staff members in the mathematical sciences departments for their cooperation and assistance in responding to the survey questionnaires. For this EENDR report, we thank the PhD recipients who responded to the survey. Their participation is vital to our providing accurate and timely information.

The Annual Survey is co-sponsored by the American Mathematical Society (AMS), American Statistical Association (ASA), Institute for Mathematical Statistics (IMS), Mathematical Association of America (MAA), and Society for Industrial and Applied Mathematics (SIAM).

## Annual Survey of the Mathematical Sciences

www.ams.org/annual-survey

Table D.5: PhDs Awarded to Underrepresented Minorities (URMs)*
by Degree-granting Group, July 1, 2017 - June 30, 2018

|  | Number of PhDs Awarded to US Citizens \& Permanent Residents | Underrespresented Minorities |  | Number of PhDs awarded to URMs | As \% of Total URMs | As \% of PhDs awarded to US Citizens \& Permanent Residents within Group |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | US Citizens | Permanent Resident |  |  |  |
| Math Public Large | 219 | 8 | 5 | 13 | 16\% | 5.9\% |
| Math Public Medium | 217 | 13 | 0 | 13 | 16\% | 6.0\% |
| Math Public Small | 120 | 14 | 0 | 14 | 18\% | 11.7\% |
| Math Private Large | 108 | 10 | 2 | 12 | 15\% | 11.1\% |
| Math Private Small | 46 | 3 | 0 | 3 | 4\% | 6.5\% |
| Applied Math | 79 | 8 | 0 | 8 | 10\% | 10.1\% |
| Statistics | 120 | 8 | 2 | 10 | 13\% | 8.3\% |
| Biostatistics | 90 | 5 | 1 | 6 | 8\% | 6.7\% |
| Total | 999 | 69 | 10 | 79 | 100\% |  |

* Underrepresented minorites include any person, who is a U.S. Citizen or Permanent Resident, who is Black or African American, Hispanic or Latino, American Indian, Alaska Native, Native Hawaiian or Other Pacfic Islander
