

Tic-Tac-Whoa! Supplementary Materials

Axel Brandt

Tic-Tac-Toe

1. What is one way to measure the “strength” of a square?
2. Under your measure, what is the strength of each square?
3. Are there groups of squares with the same strength? If so, can you come up with an idea as to why?

Three-to-Fifteen

4. What is one way to measure the “strength” of a card?
5. Under your measure, what is the strength of each card?
6. Are there groups of cards with the same strength? If so, can you come up with an idea as to why?

Analysis

Compare the structure of these two games. How are your answers to 2 and 5 similar? What about 3 and 6?
