APRIL • 1951

NUMBER 1

QUARTERLY OF APPLIED MATHEMATICS

This periodical is published quarterly under the sponsorship of Brown University, Providence, R. I. For its support, an operational fund is being set up to which industrial organizations may contribute. To date, contributions of the following industrial companies are gratefully acknowledged:

BELL TELEPHONE LABORATORIES, INC.; NEW YORK, N. Y.,
THE BRISTOL COMPANY; WATERBURY, CONN.,
CURTISS WRIGHT CORPORATION; AIRPLANE DIVISION; BUFFALO, N. Y.,
EASTMAN KODAK COMPANY; ROCHESTER, N. Y.,
GENERAL ELECTRIC COMPANY; SCHENECTADY, N. Y.,
GULF RESEARCH AND DEVELOPMENT COMPANY; PITTSBURGH, PA.,
LEEDS & NORTHRUP COMPANY; PHILADELPHIA, PA.,
PRATT & WHITNEY, DIVISION NILES-BEMENT-POND COMPANY; WEST HARTFORD,
CONN.,
REPUBLIC AVIATION CORPORATION; FARMINGDALE, LONG ISLAND, N. Y.,
UNITED AIRCRAFT CORPORATION; EAST HARTFORD, CONN.,
WESTINGHOUSE ELECTRIC AND MANUFACTURING COMPANY; PITTSBURGH, PA.

The QUARTERLY prints original papers in applied mathematics which have an intimate connection with application in industry or practical science. It is expected that each paper will be of a high scientific standard; that the presentation will be of such character that the paper can be easily read by those to whom it would be of interest; and that the mathematical argument, judged by the standard of the field of application, will be of an advanced character.

Manuscripts submitted for publication in the QUARTERLY OF APPLIED MATHEMATICS should be sent to the Managing Editor, Professor W. Prager, Quarterly of Applied Mathematics, Brown University, Providence 12, R. I., either directly or through any one of the Editors or Collaborators. In accordance with their general policy, the Editors welcome particularly contributions which will be of interest both to mathematicians and to engineers. Authors will receive galley proofs only. The authors' institutions will be requested to pay a publication charge of \$5.00 per page which, if honored, entitles them to 100 free reprints. Instructions will be sent with galley proofs.

The subscription price for the QUARTERLY is \$6.00 per volume (April-January), single copies \$2.00. Subscriptions and orders for single copies may be addressed to: Quarterly of Applied Mathematics, Brown University, Providence 12, R. I., or to Box 2-W, Richmond, Va.

Entered as second class matter March 14, 1944, at the post office at Providence, Rhode Island, under the act of March 3, 1879. Additional entry at Richmond, Virginia.

WILLIAM BYRD PRESS, INC., RICHMOND, VIRGINIA

CONTENTS (Continued from Back Cover)

NOTES:

Swami Dayal Nigam: Rotation of an infinite plane lamina: boundary layer growth: motion started impulsively from rest	89
T. M. Cherry: Relation between Bergman's and Chaplygin's methods of solving the hodograph equation	92
Paul A. Libby and Howard R. Reiss: The design of two-dimensional contraction sections	95
Chi-Teh Wang: A note on Bateman's variational principle for compressible fluid flow	99
Aurel Wintner: On a geometrical method of deriving three-dimensional harmonic flows from two-dimensional ones	102
James S. Kouvelites: Free longitudinal vibration of a prolate ellipsoid, clamped centrally	105
R. Turetsky: The least squares solution for a set of complex linear equations	108

CUT YOUR COMPUTATION TIME IN HALF

Save more than half the time you now spend doing computations by slow, old-fashion methods. Test the hundreds of shortcuts described fully in these books at our risk. Send for one or more titles on a 10-day FREE EXAMINATION basis. Return at end of 10 days, if unsatisfactory, for full and immediate cash refund.

JACOBIAN ELLIPTIC FUNCTION TABLES by L. M. Milne-Thomson. A guide to practical computation with elliptic functions and integrals together with tables of $sn u$, $cn u$, $dn u$, $Z(u)$. Specially selected to cover the widest possible range of problems. 5 x 7½. 144 pages. \$2.45

THE FOURIER INTEGRAL AND CERTAIN OF ITS APPLICATIONS by Norbert Wiener. Only book-length study of the Fourier integral as a link between harmonic analysis and mathematical theory, physics and engineering. Bibliog. 5½ x 8. xii + 201 pages. \$3.95

LINEAR INTEGRAL EQUATIONS by William Vernon Lovitt. Only English text on the general theory of linear integral equations and its applications. Index. 5½ x 8. vii + 253 pages. \$3.50

PRACTICAL ANALYSIS by Fr. A. Willers. Transl. by Robert Beyer. Graphical and numerical methods of analysis. Special section on time-saving use of calculating machines by Tracy W. Simpson. 6½ x 9¼. x + 422 pages. 132 illustrations. \$6.00

TABLES OF FUNCTIONS WITH FORMULAE AND CURVES by E. Jahnke and F. Emde. Fourth revised edition containing 400 corrections of errors and a supplementary bibliography of 43 titles. Text in English and German. Index. 5½ x 8½. xvi + 382 pages. 212 illustr. Originally published at \$6.00. \$4.95

Order your copies TODAY before prices are increased because of higher manufacturing costs. Send check or M. O. to DOVER PUBLICATIONS, DEPT. QAM2, 1780 BROADWAY, NEW YORK 19, N. Y. Books sent postpaid.

CONTENTS

T. S. KUHN: A convenient general solution of the confluent hypergeometric equation, analytic and numerical development	1
W. E. ARNOLDI: The principle of minimized iterations in the solution of the matrix eigenvalue problem	17
H. J. STEWART AND TING-YI LI: Source-superposition method of solution of a periodically oscillating wing at supersonic speeds	31
JOHN W. MILES: The oscillating rectangular airfoil at supersonic speeds .	47
W. R. SEARS AND H. S. TAN: The aerodynamics of supersonic biplanes .	67
C. V. KLOUČEK: Structural analysis by distribution of deformation . . .	77

CONTENTS (*Continued on Inside Back Cover*)

McGraw-Hill Books

INTRODUCTION TO STATISTICAL ANALYSIS

By WILFRID J. DIXON and FRANK J. MASSEY, JR., University of Oregon.
370 pages, \$4.50

This unique text presents the basic concepts of statistics in a manner which will show the student the generality of the application of the statistical method. Both classical and modern techniques are presented with emphasis on the understanding and use of the technique.

FOURIER TRANSFORMS

By IAN N. SNEDDON, University of Glasgow. *International Series in Pure and Applied Mathematics*. 542 pages, \$10.00

In this text a distinguished British mathematician presents a wealth of useful material, brought together in book form for the first time. The standard subject matter of Fourier Series and operational mathematics is extended to cover a great variety of applications to problems in engineering and physics.

TRIGONOMETRY

By CECIL T. HOLMES, Bowdoin College, 246 pages, (with tables) \$3.00

Here is a clearly understandable and thorough text that offers a closer correlation of trigonometry with other college mathematics than is done in most books of its kind. This is accomplished by introducing some very elementary notions from analytic geometry and using them consistently in proofs throughout the book.

THEORY OF PROBABILITY

By M. E. MUNROE, University of Illinois. 213 pages, \$4.50

Presents, in terms of integrals studied in first year calculus, an outline of the mathematical framework and a number of the more important results of modern investigations in probability theory. Emphasis is on the concept of a stochastic variable and its use in the statement and proof of the probability limit theorems.
