## **APPLIED MATHEMATICS**

This periodical is published quarterly under the sponsorship of Brown University, Providence, R. I. For its support, an operational fund is being set up to which industrial organizations may contribute. To date, contributions of the following industrial companies are gratefully acknowledged:

BELL TELEPHONE LABORATORIES, INC.; NEW YORK, N. Y.,

THE BRISTOL COMPANY; WATERBURY, CONN.,

CURTISS WRIGHT CORPORATION; AIRPLANE DIVISION; BUFFALO, N. Y.,

EASTMAN KODAK COMPANY; ROCHESTER, N. Y.,

GENERAL ELECTRIC COMPANY; SCHENECTADY, N. Y.,

GULF RESEARCH AND DEVELOPMENT COMPANY; PITTSBURGH, PA.,

LEEDS & NORTHRUP COMPANY; PHILADELPHIA, PA.,

PRATT & WHITNEY, DIVISION NILES-BEMENT-POND COMPANY; WEST HARTFORD, CONN.,

REPUBLIC AVIATION CORPORATION; FARMINGDALE, LONG ISLAND, N. Y.,

UNITED AIRCRAFT CORPORATION; EAST HARTFORD, CONN.,

WESTINGHOUSE ELECTRIC AND MANUFACTURING COMPANY; PITTSBURGH, PA.

The QUARTERLY prints original papers in applied mathematics which have an intimate connection with application in industry or practical science. It is expected that each paper will be of a high scientific standard; that the presentation will be of such character that the paper can be easily read by those to whom it would be of interest; and that the mathematical argument, judged by the standard of the field of application, will be of an advanced character.

Manuscripts submitted for publication in the QUARTERLY OF APPLIED MATHEMATICS should be sent to Professor W. Prager, or Professor G. F. Carrier, Quarterly of Applied Mathematics, Brown University, Providence 12, R. I., either directly or through any one of the Editors or Collaborators. In accordance with their general policy, the Editors welcome particularly contributions which will be of interest both to mathematicians and to engineers. Authors will receive galley proofs only. The authors' institutions will be requested to pay a publication charge of \$5.00 per page which, if honored, entitles them to 100 free reprints. Instructions will be sent with gallev proofs.

The subscription price for the QUARTERLY is \$6.00 per volume (April-January), single copies \$2.00. Subscriptions and orders for single copies may be addressed to: Quarterly of Applied Mathematics, Brown University, Providence 12, R. I., or to Box 2-W, Richmond, Va.

Entered as second class matter March 14, 1944, at the post office at Providence, Rhode Island, under the act of March 3, 1879. Additional entry at Richmond, Virginia.

### CONTENTS (Continued from Back Cover)

### Notes:

R. Plunkett: On the rate of convergence of relaxation methods	263
Hirsh Cohen: The stability equation with periodic coefficients	266
Robert E. Roberson: On the relationship between the Martiensson and Duffing methods for nonlinear vibrations	270
A. E. Bryson: Note on aerodynamic heating with a variable surface temperature	273
John W. Miles: A Note on the damping in roll of a cruciform winged body	276
J. J. Slade, Jr.: The elastic axes of a one-mass elastically supported system	278
Yi-Yuan Yu: Heavy disk supported by concentrated forces	280
William M. MacDonald, III, John M. Richardson and Leon P. Rosen- berry: Representation of nonlinear field functions by Thiele semi-	
invariants	284
E. H. Lee: On a "paradox" in beam vibration theory	290
Tosio Kato: On the least eigenvalue of the Hill equation	292

## METHODS OF APPLIED MATHEMATICS

by FRANCIS B. HILDEBRAND, Massachusetts Institute of Technology

This new text applies advanced mathematical principles to the solution of engineering problems. In each of the four chapters, the approach consists in: 1) showing how certain types of problems may arise; 2) establishing those parts of the relevant theory which are of practical significance; 3) developing techniques for obtaining exact or approximate solutions to the problems involved.

524 pages 5<sup>5</sup>/<sub>8</sub>" x 8<sup>3</sup>/<sub>8</sub>" August, 1952

## NUMERICAL METHODS IN ENGINEERING

by MARIO SALVADORI, Columbia University

Presents a simple but thorough discussion of numerical methods used to solve problems arising in all branches of applied science. Designed for a one-semester course offered to upperclass students who have studied calculus and elementary differential calculus.

258 pages 5<sup>5</sup>/<sub>8</sub>" x 8<sup>3</sup>/<sub>8</sub>" July, 1952

### INTRODUCTION TO THE THEORY OF GAMES

By J. C. C. MCKINSEY, Stanford University. 382 pages, \$6.50

Deals with the mathematical theory of games of strategy. The mathematical apparatus developed by the author will find application not only in the pure form of parlor games of strategy (chess, bridge, poker, etc.), but also in economics, statistics, and the theory of military strategy. The author covers this new field comprehensively, including both finite and infinite games and games with more than two players.

### LINEAR ALGEBRA AND MATRIX THEORY

By ROBERT R. STOLL, Lehigh University. International Series in Pure and Applied Mathematics. 272 pages, \$6.00

A text for college courses "in modern algebra," this book covers the theory of matrices viewed against the background of modern algebra. It presents topics of algebra which are of ever-increasing importance in a wide variety of fields; provides the student of engineering with the necessary algebraic background for studying circuit theory, vibration theory, and dynamics of particles; and introduces students of mathematics to the techniques and point of view of modern algebra via concrete examples from matrix theory.

### ADVANCED STRENGTH OF MATERIALS

By J. P. DEN HARTOG, Massachusetts Institute of Technology. 379 pages, \$8.50

A text for senior and graduate students in engineering, covering strength of materials and theory of elasticity—starting from the level usually attained after the customary first one-term course. Provides the link from elementary texts to advanced treatments.
