VOLUME LXXVI **DECEMBER · 2018** **NUMBER 4**

This journal is devoted to original papers in applied mathematics which have an intimate connection with applications. It is expected that each paper will be of a high scientific standard; that the presentation will be of such character that the paper can be easily read by those to whom it would be of interest; and that the mathematical argument, judged by the standard of the field of application, will be of an advanced character.

In accordance with their general policy, the Editors welcome particularly contributions which will be of interest both to mathematicians and to scientists or engineers. Authors will receive galley proof, and offprints will be provided in electronic form free of charge. A downloadable and printable PDF of each published article will be available to authors immediately after publication. Detailed instructions will be sent with galley proofs.

Submission information. The Quarterly of Applied Mathematics uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at `www.ams.org/submission/qam`. The final decision on acceptance of a manuscript for publication is made by the Managing Editor. Simultaneous submissions (i.e., concurrent submissions to another journal) are not accepted. See **Suggestions Concerning the Preparation of Manuscripts for the Quarterly of Applied Mathematics** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Division of Applied Mathematics, Brown University, 182 George Street, Box F, Providence, RI 02912.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Subscription information. Beginning March 2005 the *Quarterly of Applied Mathematics* is accessible from `www.ams.org/journals/`. Subscription prices for Volume 76 (2018) are as follows: for paper delivery, US$200; for electronic delivery, US$175. Subscription renewals are subject to late fees. See `www.ams.org/journals-faq` for more journal subscription information. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. For back volume/back issue prices and availability, go to `www.ams.org/bookstore/backvols/`. For paper delivery, subscribers inside the United States must pay a postage surcharge of US$5.25; subscribers outside the United States must pay a postage surcharge of US$15. Subscriptions and orders for back volumes must be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904, USA. All orders must be accompanied by payment. Other subscription correspondence should be addressed to the American Mathematical Society, 201 Charles St., Providence, RI 02904-2213, USA.

VOLUME LXXVI **2018**

ANNUAL INDEX

Amendola, G., M. Fabrizio, and J. M. Golden. *General dissipative materials for simple histories*, 627

Antipov, Y. A., and S. M. Mkhitaryan. *Integral relations associated with the semi-infinite Hilbert transform and applications to singular integral equations*, 739

Banks, H. T. *See* Bokil, V. A.

Barker, Blake, Jeffrey Humpherys, Gregory Lyng, and Kevin Zumbrun. *Balanced flux formulations for multidimensional Evans-function computations for viscous shocks*, 531

Bokil, V. A., H. T. Banks, D. Cioranescu, and G. Griso. *A multiscale method for computing effective parameters of composite electromagnetic materials with memory effects*, 713

Carrillo, José-Antonio, and Filippo Santambrogio. *L^∞ estimates for the JKO scheme in parabolic-elliptic Keller-Segel systems*, 515

Charalambopoulos, Antonios, and Leonidas N. Gergidis. *A novel stochastic method for the solution of direct and inverse exterior elliptic problems*, 65

Chu, Jifeng. *On a nonlinear integral equation for the ocean flow in arctic gyres*, 489

Cioranescu, D. *See* Bokil, V. A.

Dassios, George, Michael Doschoris, and Konstantia Satrazemi. *On the resolution of synchronous dipolar excitations via MEG measurements*, 39

Deconinck, Bernard, Qi Guo, Eli Shlizerman, and Vishal Vasan. *Fokas's Unified Transform Method for linear systems*, 463

Doschoris, Michael. *See* Dassios, George

Dweik, Samer. *Weighted Beckmann problem with boundary costs*, 601

Fabrizio, M. *See* Amendola, G.

Ferreira, Lucas C. F., and Sérgio L. N. Neves. *On elliptic equations with singular potentials and nonlinear boundary conditions*, 699

Galdi, Giovanni P., Giusy Mazzone, and Mahdi Mohebbi. *On the motion of a liquid-filled heavy body around a fixed point*, 113

Gergidis, Leonidas N. *See* Charalambopoulos, Antonios

Giga, Yoshikazu. *See* Koba, Hajime

Golden, J. M. *See* Amendola, G.

Griso, G. *See* Bokil, V. A.

Guo, Qi. *See* Deconinck, Bernard

Hantke, Maren, and Siegfried Müller. *Analysis and simulation of a new multi-component two-phase flow model with phase transitions and chemical reactions*, 253

Herron, Isom H. *A unified solution of several classical hydrodynamic stability problems*, 1

Humpherys, Jeffrey. *See* Barker, Blake

Kaiser, Ralf, and Andreas Tilgner. *Optimal energy bounds in spherically symmetric α^2-dynamos*, 437

Kaushik, Vivek, and Daniele Ritelli. *Evaluation of harmonic sums with integrals*, 577

Kim, Eugenia, and Jon Wilkening. *Convergence of a mass-lumped finite element method for the Landau-Lifshitz equation*, 383

Knops, R. J., and R. Quintanilla. *Spatial decay in transient heat conduction for general elongated regions*, 611

Koba, Hajime. *On derivation of compressible fluid systems on an evolving surface*, 303

Koba, Hajime, Chun Liu, and Yoshikazu Giga. *Errata to "Energetic variational approaches for incompressible fluid systems on an evolving surface"*, 147

Laurençot, Philippe. *Mass-conserving solutions to coagulation-fragmentation equations with nonintegrable fragment distribution function*, 767

Leach, J. A. *The large-time development of the solution to an initial-value problem for the Korteweg-de Vries equation: IV. Time dependent coefficients*, 361

LeCun, Yann. *See* Sagun, Levent

Li, Dening. *Initial-boundary value problem for Euler equations with incompatible data*, 47

Li, Lei, and Jian-Guo Liu. *A note on deconvolution with completely monotone sequences and discrete fractional calculus*, 189

Liu, Chun. *See* Koba, Hajime

Liu, Jian-Guo. *See* Li, Lei

Lyng, Gregory. *See* Barker, Blake

Mazzone, Giusy. *See* Galdi, Giovanni P.

Miura, Tatsu-Hiko. *On singular limit equations for incompressible fluids in moving thin domains*, 215

Mkhitaryan, S. M. *See* Antipov, Y. A.

Mohebbi, Mahdi. *See* Galdi, Giovanni P.
Müller, Siegfried. *See* Hantke, Maren
Munnier, Alexandre, and Karim Ramdani. *Calderón cavities inverse problem as a shape-from-moments problem*, 407
Muntean, Adrian. *See* Seidman, Thomas I.
Neves, Sérgio L. N. *See* Ferreira, Lucas C. F.
Niethammer, B., and J. J. L. Velázquez. *Oscillatory traveling wave solutions for coagulation equations*, 153
Pasquero, Stefano. *Ideal characterizations of multiple impacts: A frame–independent approach by means of jet–bundle geometry*, 547
Quintanilla, R. *See* Knops, R. J.
Ramdani, Karim. *See* Munnier, Alexandre
Ritelli, Daniele. *See* Kaushik, Vivek
Sagun, Levent, Thomas Trogdon, and Yann LeCun. *Universal halting times in optimization and machine learning*, 289
Santambrogio, Filippo. *See* Carrillo, José-Antonio
Satrazemi, Konstantia. *See* Dassios, George
Seidman, Thomas I., and Adrian Muntean. *Asymptotics of diffusion-limited fast reactions*, 199
Shlizerman, Eli. *See* Deconinck, Bernard
Tilgner, Andreas. *See* Kaiser, Ralf
Triki, Faouzi, and Margaux Vauthrin. *Mathematical modeling of the photoacoustic effect generated by the heating of metallic nanoparticles*, 673
Trogdon, Thomas. *See* Sagun, Levent
Vafeas, Panayiotis. *On the integro-differential general solution for the unsteady micropolar Stokes flow of a conducting ferrofluid*, 19
Vasan, Vishal. *See* Deconinck, Bernard
Vauthrin, Margaux. *See* Triki, Faouzi
Velázquez, J. J. L. *See* Niethammer, B.
Wang, Ya-Guang, and Shi-Yong Zhu. *On the inviscid limit for the compressible Navier-Stokes system with no-slip boundary condition*, 499
Wilkening, Jon. *See* Kim, Eugenia
Zhu, Shi-Yong. *See* Wang, Ya-Guang
Zumbrun, Kevin. *See* Barker, Blake

SUGGESTIONS CONCERNING THE PREPARATION OF MANUSCRIPTS FOR THE QUARTERLY OF APPLIED MATHEMATICS

The editors will appreciate the authors' cooperation in taking note of the following directions for the preparation of manuscripts. These directions have been drawn up with a view toward eliminating unnecessary correspondence, avoiding the return of papers for changes, and reducing the charges made for "author's corrections."

Submission of Accepted Manuscripts:

Submission of manuscripts electronically-prepared in LaTeX is required, with a strong preference for $\mathcal{AMS}$-LaTeX. To assist authors in preparing electronic manuscripts, the AMS has prepared author packages. The author package includes instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, graphic creation instructions, and a style file. When choosing a style file for the *Quarterly of Applied Mathematics*, choose the QAM-specific journal package, made available by the American Mathematical Society at `www.ams.org/distribution/qam/qamauthorpac.html`. For more technical information, please visit `www.ams.org/authors/author-faq.html`.

Contributions to the *Quarterly of Applied Mathematics* should be submitted in final form. Only typographical errors should be corrected in proof; composition charges for any major deviations from the manuscript will be passed on to the *Quarterly of Applied Mathematics*. An abstract is required for all QAM manuscripts.

After the contribution has been accepted for publication, electronic files (.tex files along with .eps (or .tiff) files for figures) should be submitted via the web at `www.ams.org/submit-book-journal`, or sent via email to `pub-submit@ams.org`, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles St., Providence, RI 02904-2294 USA. When submitting electronic manuscripts via email or CD, please include a message indicating that the paper has been accepted for publication in the *Quarterly of Applied Mathematics*.

Electronic Graphics:

Comprehensive instructions on preparing graphics are included in PDF format in the author package. Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originating via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should avoid the use of any lines thinner than 0.5 points in width at 100%. Many graphics packages allow the user to specify a "hairline" for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens that fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed QAM issue unless color printing is authorized by the Managing Editor and paid for by the authors. In general, color graphics will appear in color in the online QAM issue.

CONTENTS

Vol. LXXVI, No. 4 **December 2018**

Samer Dweik, Weighted Beckmann problem with boundary costs 601

R. J. Knops and R. Quintanilla, Spatial decay in transient heat conduction for general elongated regions 611

G. Amendola, M. Fabrizio, and J. M. Golden, General dissipative materials for simple histories 627

Faouzi Triki and Margaux Vauthrin, Mathematical modeling of the photoacoustic effect generated by the heating of metallic nanoparticles 673
