**Herbert Gangl\*** ([herbert.gangl@durham.ac.uk](mailto:herbert.gangl@durham.ac.uk)), Dept. of Math Sciences, Durham, DH1 3LE, England, and **Francis Brown** and **Andrey Levin**. *Polygons and mixed Tate motives*. Preliminary report.

We relate two "polygonal" approaches to mixed Tate motives over a field: one approach arising from work of Brown in the study of periods of moduli spaces  $M_{0,n}$ , the other one from joint work with Levin and Goncharov in connection with algebraic cycles and iterated integrals.
