Tokyo, 169-8050, Japan. *Ulrich ideals in 2-almost Gorenstein rings.*

My talk is based on the recent joint work with S. Goto and R. Isobe. The notion of 2-almost Gorenstein ring is a generalization of the notion of almost Gorenstein ring from the point of view of Sally modules of canonical ideals. In this talk, for further developments of the theory, we explore the structure of Ulrich ideals in 2-almost Gorenstein rings, mainly two-generated ones. (Received January 23, 2019)
