Remarks on Gagliardo-Nirenberg type inequalities in Fourier-Herz spaces.

We prove Gagliardo-Nirenberg type inequalities in Fourier-Lebesgue spaces and also in end-point Besov and Fourier-Herz spaces. A subfamily of these inequalities can be viewed as a refinement of the corresponding classical Gagliardo-Nirenberg inequalities. For instance, a refinement of the Ladyzhenskaya inequality can be deduced as a corollary. Some application to the blow-up criterion of the incompressible viscous fluid is also shown.
