Oana Veliche* (o.veliche@northeastern.edu), 360 Huntington Ave, Boston, MA 02115-5005, and **Lars W. Christensen** and **Jerzy Weyman**. *On Almost Complete Intersection of Grade 3 Perfect Ideals*. Preliminary report.

The combinatorial approach of Kunth (1996) to overlapping Pfaffians of a skew-symmetric matrix allowed us to reprove and clarify a formula of Brill (1904) on the minors of a skew-symmetric matrix. As a consequence, we give a new proof to the structure of grade 3 perfect almost complete intersection ideals. The original, independent, proofs were given by Avramov (1981) and Brown (1984) using linkage and the structure of grade 3 Gorenstein ideals given by Buchsbaum and Eisenbud (1977).
