Preface	vii
Chapter 1. Geometric Mechanics on the Heisenberg Group	1
1.1. Definitions for the Heisenberg group	1
1.2. The horizontal distribution	7
1.3. Horizontal connectivity theorem	10
1.4. Hamiltonian formalism on the Heisenberg group	13
1.5. The connection form	18
1.6. Lagrangian formalism on the Heisenberg group	23
1.7. Carnot-Carathéodory distance	38
1.8. Exercises	42
Chapter 2. Geometric Analysis of Step 4 Case	45
2.1. Elliptic functions	45
2.2. The horizontal distribution	47
2.3. SubRiemannian geodesics	51
2.4. Lagrangian formalism	53
2.5. Solutions which start from the origin	56
2.6. The length of the geodesics between the origin and $(0, 0, t)$	64
2.7. Explicit solutions connecting the origin to $(0, 0, t)$	69
2.8. Solutions which start outside the origin	71
2.9. Geodesics between the origin and points away from the t -axis	78
2.10. Geodesic completeness in step 4 case	82
2.11. Exercises	82
Chapter 3. The Geometric Analysis of Step $2(k + 1)$ Case	85
3.1. The horizontal distribution	85
3.2. Horizontal connectivity	86
3.3. SubRiemannian geodesics	88
3.4. Euler-Lagrange system in polar coordinates	91
3.5. Geodesics starting at the origin	91
3.6. Carnot-Carathéodory distances from the origin	97
3.7. Particular cases	100
3.8. Conjugate points to the origin	105
3.9. The use of the hypergeometric function	106
3.10. Geodesics starting outside the origin	110
3.11. Geodesic completeness	113
3.12. Global connectivity by geodesics	115
3.13. Kaehler metrics	117
3.14. The classical action	118

3.15. Exercises	122
Chapter 4. Geometry on Higher Dimensional Heisenberg Groups	125
4.1. The Heisenberg group \mathbf{H}_n	125
4.2. Hamiltonian mechanics on \mathbf{H}_n	126
4.3. The classical action	129
4.4. The horizontal distribution	129
4.5. The Carnot-Carathéodory distance	130
4.6. The shortest geodesic	136
4.7. Caustics	140
4.8. Exercises	141
Chapter 5. Complex Hamiltonian Mechanics	145
5.1. The harmonic oscillator and the Heisenberg group	145
5.2. The quantum Hamiltonian	147
5.3. Complex subRiemannian geodesics	147
5.4. Complex subRiemannian geodesics on the Heisenberg group	148
5.5. Complex connectivity	153
5.6. The complex action	162
5.7. Hamilton-Jacobi equation	166
5.8. Geodesic completeness	169
5.9. Solving Hamilton-Jacobi equation	171
5.10. Theorem of Jacobi and applications	174
5.11. The lengths of the real geodesics	177
5.12. Modified complex action function on \mathbf{H}_n	184
5.13. A geometric formula for the fundamental solution	188
5.14. The volume element on the Heisenberg group	190
5.15. Exercises	194
Chapter 6. Quantum Mechanics on the Heisenberg group	199
6.1. Linear Harmonic Oscillator	199
6.2. The operators Z and \bar{Z} and the energy quantification	201
6.3. The ground-state ψ_0 and the states ψ_n	203
6.4. The operator $\partial_\tau - Z$	206
6.5. Heisenberg derivative	211
6.6. The fundamental solution for Δ_H	212
6.7. The fundamental solution for $\Delta_\lambda = \Delta_H - \frac{i}{2}\lambda[X_1, X_2]$	213
6.8. An application to the eigenfunctions of Δ_H	215
6.9. The Schrödinger kernel	216
6.10. The heat kernel on \mathbf{H}_1	222
6.11. Maxwell's equations	228
6.12. Quantization of energy	233
6.13. Kepler-type laws	235
6.14. Exercises	236
Bibliography	239
Bibliography	239
Index	241
