## Volume I

Preface	xi
Chapter 1. Introduction	1
1.1 What is Floer (co)homology	1
1.2 General theory of Lagrangian Floer cohomology	5
1.3 Applications to symplectic geometry	13
1.4 Relation to mirror symmetry	16
1.5 Chapter-wise outline of the main results	25
1.6 Acknowledgments	35
1.7 Conventions	36
Chapter 2. Review: Floer cohomology	39
2.1 Bordered stable maps and the Maslov index	39
2.1.1 The Maslov index: the relative first Chern number	39
2.1.2 The moduli space of bordered stable maps	43
2.2 The Novikov covering and the action functional	49
2.2.1 The $\Gamma$ -equivalence	50
2.2.2 The action functional and the Maslov-Morse index	51
2.3 Review of Floer cohomology I: without anomaly	53
2.3.1 The $L^2$ -gradient equation of $\mathcal{A}$	53
2.3.2 Floer's definition: $\mathbb{Z}_2$ -coefficients.	57
2.3.3 Bott-Morse Floer cohomology	59
2.4 Review of Floer cohomology II: anomaly appearance	60
2.4.1 The Floer cochain module	61
2.4.2 The Floer moduli space	62
2.4.3 The Novikov ring $\Lambda^R(L)$	66
2.4.4 Monotone Lagrangian submanifolds	69
2.4.5 Appearance of the primary obstruction	71
Chapter 3. The $A_\infty$ algebra associated to a Lagrangian submanifold	77
3.1 Outline of Chapter 3	77
3.2 Algebraic framework on filtered $A_\infty$ algebras	86
3.2.1 $A_\infty$ algebras and homomorphisms	86
3.2.2 Filtered $A_\infty$ algebras and homomorphisms	89
3.3 Algebraic framework on the homotopy unit	94
3.3.1 Definition of the homotopy unit	94
3.3.2 Unital (resp. homotopy unital) $A_\infty$ homomorphisms	97
3.4 $A_\infty$ deformation of the cup product	97

3.5 The filtered $A_\infty$ algebra associated to a Lagrangian submanifold	102
3.6 Bounding cochains and the $A_\infty$ Maurer-Cartan equation.	107
3.6.1 Bounding cochains and deformations	108
3.6.2 Obstruction for the existence of bounding cochain	111
3.6.3 Weak unobstructedness and existence of Floer cohomology	114
3.6.4 The superpotential and $\widehat{\mathcal{M}}(C)$	117
3.7 $A_\infty$ bimodules and Floer cohomology	120
3.7.1 Algebraic framework	120
3.7.2 $A_\infty$ bimodule homomorphisms	123
3.7.3 Weak unobstructedness and deformations	125
3.7.4 The filtered $A_\infty$ bimodule $C(L^{(1)}, L^{(0)}; \Lambda_{0,nov})$	126
3.7.5 The Bott-Morse case	137
3.7.6 Examples	151
3.7.7 The multiplicative structure on Floer cohomology	155
3.8 Inserting marked points in the interior	156
3.8.1 The operator $\mathfrak{p}$	156
3.8.2 Applications to vanishing of the obstruction classes $o_k(L)$	159
3.8.3 Outline of the construction of the operator $\mathfrak{p}$	161
3.8.4 The operator $\mathfrak{q}$	165
3.8.5 Bulk deformation of filtered $A_\infty$ structures	168
3.8.6 Outline of the construction of the operator $\mathfrak{q}$	175
3.8.7 The operator $\mathfrak{r}$ and the $A_\infty$ bimodule	178
3.8.8 Construction of the operator $\mathfrak{r}$	181
3.8.9 Generalization of the operator $\mathfrak{p}$	182
3.8.10 Proof of parts of Theorems B, C and G	188
 Chapter 4. Homotopy equivalence of $A_\infty$ algebras	191
4.1 Outline of Chapters 4 and 5	191
4.2 Homotopy equivalence of $A_\infty$ algebras: the algebraic framework	197
4.2.1 Models of $[0, 1] \times C$	197
4.2.2 Homotopies between $A_\infty$ homomorphisms	205
4.2.3 The unital or homotopy-unital cases	208
4.3 Gauge equivalence of bounding cochains	211
4.3.1 Basic properties and the category $\mathfrak{HA}_\infty$	211
4.3.2 $\mathcal{M}_{\text{weak}}(C)$ and its homotopy invariance	215
4.3.3 $\mathcal{M}_{\text{weak,def}}(L)$ and its homotopy invariance	216
4.4 Uniqueness of the model of $[0, 1] \times C$	217
4.4.1 Induction on the number filtration I	218
4.4.2 $A_K$ structures and homomorphisms	219
4.4.3 Induction on the number filtration II	220
4.4.4 Unital case I: the unfiltered version	223
4.4.5 Coderivation and Hochschild cohomology	226
4.4.6 Induction on the energy filtration	230
4.4.7 Unital case II: the filtered version	232
4.5 Whitehead theorem in $A_\infty$ algebras	233
4.5.1 Extending $A_K$ homomorphisms to $A_{K+1}$ homomorphisms	234
4.5.2 Proof of Theorem 4.2.45 I: the number filtration	236
4.5.3 Unital case: the unfiltered version	237

4.5.4 Extending filtered $A_\infty$ homomorphism modulo $T^{\lambda_i}$ to modulo $T^{\lambda_{i+1}}$	239
4.5.5 Proof of Theorem 4.2.45 II: the energy filtration	241
4.6 Homotopy equivalence of $A_\infty$ algebras: the geometric realization	242
4.6.1 Construction of $A_\infty$ homomorphisms	242
4.6.2 Homotopies between $A_\infty$ homomorphisms	249
4.6.3 Compositions	257
4.6.4 Homotopy equivalence and the operator $\mathfrak{q}$ I: changing the cycle in the interior	259
4.6.5 Homotopy equivalence and the operator $\mathfrak{q}$ II: invariance of sym- plectic diffeomorphisms 1	261
4.6.6 Homotopy equivalence and the operator $\mathfrak{q}$ III: invariance of symplectic diffeomorphisms 2	264
 Chapter 5. Homotopy equivalence of $A_\infty$ bimodules	267
5.1 Novikov rings	267
5.1.1 Reduction to universal Novikov ring	267
5.1.2 Hamiltonian independence of the Novikov ring	270
5.1.3 Floer cohomologies over $\Lambda(L^{(0)}, L^{(1)}; \ell_0)$ and $\Lambda_{nov}$	272
5.2 Homotopy equivalences of $A_\infty$ bimodules: the algebraic framework	275
5.2.1 Weakly filtered $A_\infty$ bimodule homomorphisms	275
5.2.2 Deformations of $A_\infty$ bimodule homomorphisms	276
5.2.3 Homotopies between $A_\infty$ bimodule homomorphisms	282
5.2.4 Gauge invariance and the category $\mathfrak{HA}_\infty(C_1, C_0)$	288
5.2.5 Obstructions to defining $A_\infty$ bimodule homomorphisms I	291
5.2.6 Whitehead theorem for $A_\infty$ bimodule homomorphisms	292
5.2.7 Obstructions to defining $A_\infty$ bimodule homomorphisms II	294
5.3 Homotopy equivalences of $A_\infty$ bimodules: the geometric realiza- tion	296
5.3.1 Construction of filtered $A_\infty$ bimodule homomorphisms	296
5.3.2 Moving Lagrangian submanifolds by Hamiltonian isotopies	306
5.3.3 Homotopies between bimodule homomorphisms	313
5.3.4 Compositions of Hamiltonian isotopies and of bimodule homo- morphisms	319
5.3.5 An energy estimate.	321
5.3.6 The operators $\mathfrak{q}, \mathfrak{r}$ and homotopy equivalence	326
5.3.7 Wrap-up of the proof of invariance of Floer cohomologies	327
5.4 Canonical models, formal super schemes and Kuranishi maps	330
5.4.1 Canonical models, Kuranishi maps and bounding cochains	330
5.4.2 The canonical models of filtered $A_\infty$ bimodules	336
5.4.3 Filtered $A_\infty$ bimodules and complex of coherent sheaves	337
5.4.4 Construction of the canonical model	339
5.4.5 Including the operator $\mathfrak{q}$	347
5.4.6 Wrap-up of the proofs of Theorems F, G, M, N and Corollaries O, P	349
 Chapter 6. Spectral sequences	355
6.1 Statement of the results in Chapter 6	355

6.1.1 The spectral sequence	355
6.1.2 Non-vanishing theorem and a Maslov class conjecture	357
6.1.3 Applications to Lagrangian intersections	360
6.2 A toy model: rational Lagrangian submanifolds	362
6.3 The algebraic construction of the spectral sequence	366
6.3.1 c.f.z.	367
6.3.2 d.g.c.f.z. (differential graded c.f.z.)	369
6.3.3 Construction and convergence	371
6.4 The spectral sequence associated to a Lagrangian submanifold	375
6.4.1 Construction	375
6.4.2 A condition for degeneration: proof of (D.3)	375
6.4.3 Non-vanishing theorem: proof of Theorem 6.1.9.	377
6.4.4 Application to the Maslov class conjecture: proofs of Theorems 6.1.15 and 6.1.17	381
6.4.5 Compatibility with the product structure	382
6.5 Applications to Lagrangian intersections	385
6.5.1 Proof of Theorem H	385
6.5.2 Proof of Theorem I	385
6.5.3 Torsion of the Floer cohomology and Hofer distance: Proof of Theorem J	388
6.5.4 Floer cohomologies of Lagrangian submanifolds that do not in- tersect cleanly	393
6.5.5 Unobstructedness modulo $T^E$	395

## Volume II

Chapter 7. Transversality	397
7.1 Construction of the Kuranishi structure	398
7.1.1 Statement of the results in Section 7.1	398
7.1.2 Kuranishi charts on $\mathcal{M}_{k+1}^{\text{main},\text{reg}}(\beta)$ : Fredholm theory	401
7.1.3 Kuranishi charts in the complement of $\mathcal{M}_{k+1}^{\text{main},\text{reg}}(\beta)$ : gluing	404
7.1.4 Wrap-up of the proof of Propositions 7.1.1 and 7.1.2	418
7.1.5 The Kuranishi structure of $\mathcal{M}_{k+1}^{\text{main}}(M', L', \{J_\rho\}_\rho : \beta; \text{top}(\rho))$ : $A_\infty$ map analog of Stasheff cells	425
7.2 Multisections and choice of a countable set of chains	435
7.2.1 Transversality at the diagonal	436
7.2.2 Inductive construction of compatible system of multisections in the Bott-Morse case	437
7.2.3 Perturbed moduli space running out of the Kuranishi neighbor- hood I	444
7.2.4 Statement of results	445
7.2.5 Proof of Proposition 7.2.35	449
7.2.6 Filtered $A_{n,k}$ structures	458
7.2.7 Construction of filtered $A_{n,K}$ structures	461
7.2.8 Perturbed moduli space running out of the Kuranishi neigbor- hood II	466
7.2.9 Construction of filtered $A_{n,K}$ homomorphisms	468

7.2.10 Constructions of filtered $A_{n,K}$ homotopies	483
7.2.11 Constructions of filtered $A_\infty$ homotopies I: a short cut	502
7.2.12 Constructions of filtered $A_\infty$ homotopies II: the algebraic framework on homotopy of homotopies	505
7.2.13 Constructions of filtered $A_\infty$ homotopies III: the geometric realization of homotopy of homotopies	534
7.2.14 Bifurcation vs cobordism method: an alternative proof	569
7.3 Construction of homotopy unit	574
7.3.1 Statement of the result and the idea of its proof	574
7.3.2 Proof of Theorem 7.3.1	576
7.3.3 Proof of (3.8.36)	587
7.4 Details of the construction of the operators $\mathfrak{p}$ , $\mathfrak{q}$ and $\mathfrak{r}$	589
7.4.1 Details of the construction of $\mathfrak{p}$	589
7.4.2 Construction of $\mathfrak{q}$ I: the $A_{n,K}$ version	595
7.4.3 Construction of $\mathfrak{q}$ II: $\mathfrak{q}$ is an $L_\infty$ homomorphism	596
7.4.4 Construction of $\mathfrak{q}$ III: the homotopy invariance of $\text{Der}(\widehat{B}(C[1]), \widehat{B}(C[1]))$	601
7.4.5 Construction of $\mathfrak{q}$ IV: wrap-up of the proof of Theorem 3.8.32	621
7.4.6 Proof of Theorem Y	625
7.4.7 Algebraic formulation of $\mathfrak{r}$ I: $\text{Der } B(C_1, C_0; D)$ and its homotopy invariance	631
7.4.8 Algebraic formulation of $\mathfrak{r}$ II: via bifurcation argument	637
7.4.9 Algebraic formulation of $\mathfrak{r}$ III: via cobordism argument	640
7.4.10 Algebraic formulation of $\mathfrak{p}$ I: the cyclic bar complex is an $L_\infty$ module	644
7.4.11 Algebraic formulation of $\mathfrak{p}$ II: $\mathfrak{p}$ induces an $L_\infty$ module homomorphism	647
7.5 Compatibility with rational homotopy theory	650
7.5.1 Statement of results	650
7.5.2 Virtual fundamental chain in de Rham theory	652
7.5.3 The Kuranishi structure of $\mathcal{M}_{k+1}^{\text{main}}(\beta_0)$	654
7.5.4 Construction of the $A_K$ homomorphism I	655
7.5.5 Construction of the $A_K$ homomorphism II	663
7.5.6 The $A_\infty$ map to a topological monoid and $\mathcal{N}'_{k+1}$	669
Chapter 8. Orientation	675
8.1 Orientation of the moduli space of unmarked discs	675
8.1.1 The case of holomorphic discs	675
8.1.2 The example of non-orientable family index	684
8.1.3 The case of connecting orbits in Floer theory	686
8.1.4 Change of relatively spin structure and orientation	690
8.2 Convention and preliminaries	691
8.3 Orientation of the moduli space of marked discs and of the singular strata of the moduli space	698
8.4 Orientation of $\mathcal{M}_{\ell+1}(\beta; P_1, \dots, P_\ell)$ .	703
8.4.1 Definition of the orientation of $\mathcal{M}_{\ell+1}(\beta; P_1, \dots, P_\ell)$	703
8.4.2 Cyclic symmetry and orientation	705
8.5 The filtered $A_\infty$ algebra case	708
8.6 Orientation of the moduli space of constant maps	713

8.7 Orientation of the moduli space of connecting orbits	716
8.8 The Bott-Morse case	719
8.9 Orientations of the top-moduli spaces and the twp-moduli spaces	731
8.9.1 Orientation of $\mathcal{M}_{k+1}^{\text{main}}(M', L', \{J_\rho\}_\rho : \beta; \text{top}(\rho))$	731
8.9.2 Orientation of $\mathcal{M}_{k+1}^{\text{main}}(\{J_\rho\}_\rho : \beta; \text{twp}(\rho); \mathcal{P}_1, \dots, \mathcal{P}_k)$	735
8.10 Homotopy units, the operators $\mathfrak{p}, \mathfrak{q}$ , continuous families of perturbations, etc.	738
8.10.1 Homotopy unit	738
8.10.2 Operators $\mathfrak{p}, \mathfrak{q}$	738
8.10.3 Continuous families of perturbations	749
Appendices	753
A1 Kuranishi structures	753
A1.1 Review of the definition of the Kuranishi structure and multi-sections	754
A1.2 Fiber products	764
A1.3 Finite group actions and the quotient space	766
A1.4 A remark on smoothness of coordinate transforms	768
A1.5 Some counter examples	778
A1.6 Some errors in the earlier versions and corrections thereof	779
A2 Singular chains with local coefficients	780
A3 Filtered $L_\infty$ algebras and symmetrization of filtered $A_\infty$ algebras	782
A4 The differential graded Lie algebra homomorphism in Theorem 7.4.132	787
Bibliography	791
Index	801
