Volume I

Preface	xi
Chapter 1. Introduction	1
1.1 What is Floer (co)homology	1
1.2 General theory of Lagrangian Floer cohomology	5
1.3 Applications to symplectic geometry	13
1.4 Relation to mirror symmetry	16
1.5 Chapter-wise outline of the main results	25
1.6 Acknowledgments	35
1.7 Conventions	36
Chapter 2. Review: Floer cohomology	39
2.1 Bordered stable maps and the Maslov index	39
2.1.1 The Maslov index: the relative first Chern number	39
2.1.2 The moduli space of bordered stable maps	43
2.2 The Novikov covering and the action functional	49
2.2.1 The Γ -equivalence	50
2.2.2 The action functional and the Maslov-Morse index	51
2.3 Review of Floer cohomology I: without anomaly	53
2.3.1 The L^2 -gradient equation of \mathcal{A}	53
2.3.2 Floer's definition: \mathbb{Z}_2 -coefficients.	57
2.3.3 Bott-Morse Floer cohomology	59
2.4 Review of Floer cohomology II: anomaly appearance	60
2.4.1 The Floer cochain module	61
2.4.2 The Floer moduli space	62
2.4.3 The Novikov ring $\Lambda^R(L)$	66
2.4.4 Monotone Lagrangian submanifolds	69
2.4.5 Appearance of the primary obstruction	71
Chapter 3. The A_∞ algebra associated to a Lagrangian submanifold	77
3.1 Outline of Chapter 3	77
3.2 Algebraic framework on filtered A_∞ algebras	86
3.2.1 A_∞ algebras and homomorphisms	86
3.2.2 Filtered A_∞ algebras and homomorphisms	89
3.3 Algebraic framework on the homotopy unit	94
3.3.1 Definition of the homotopy unit	94
3.3.2 Unital (resp. homotopy unital) A_∞ homomorphisms	97
3.4 A_∞ deformation of the cup product	97

3.5	The filtered A_∞ algebra associated to a Lagrangian submanifold	102
3.6	Bounding cochains and the A_∞ Maurer-Cartan equation.	107
3.6.1	Bounding cochains and deformations	108
3.6.2	Obstruction for the existence of bounding cochain	111
3.6.3	Weak unobstructedness and existence of Floer cohomology	114
3.6.4	The superpotential and $\widehat{\mathcal{M}}(C)$	117
3.7	A_∞ bimodules and Floer cohomology	120
3.7.1	Algebraic framework	120
3.7.2	A_∞ bimodule homomorphisms	123
3.7.3	Weak unobstructedness and deformations	125
3.7.4	The filtered A_∞ bimodule $C(L^{(1)}, L^{(0)}; \Lambda_{0, nov})$	126
3.7.5	The Bott-Morse case	137
3.7.6	Examples	151
3.7.7	The multiplicative structure on Floer cohomology	155
3.8	Inserting marked points in the interior	156
3.8.1	The operator \mathfrak{p}	156
3.8.2	Applications to vanishing of the obstruction classes $o_k(L)$	159
3.8.3	Outline of the construction of the operator \mathfrak{p}	161
3.8.4	The operator \mathfrak{q}	165
3.8.5	Bulk deformation of filtered A_∞ structures	168
3.8.6	Outline of the construction of the operator \mathfrak{q}	175
3.8.7	The operator \mathfrak{r} and the A_∞ bimodule	178
3.8.8	Construction of the operator \mathfrak{r}	181
3.8.9	Generalization of the operator \mathfrak{p}	182
3.8.10	Proof of parts of Theorems B, C and G	188
Chapter 4.	Homotopy equivalence of A_∞ algebras	191
4.1	Outline of Chapters 4 and 5	191
4.2	Homotopy equivalence of A_∞ algebras: the algebraic framework	197
4.2.1	Models of $[0, 1] \times C$	197
4.2.2	Homotopies between A_∞ homomorphisms	205
4.2.3	The unital or homotopy-unital cases	208
4.3	Gauge equivalence of bounding cochains	211
4.3.1	Basic properties and the category $\mathfrak{H}\mathfrak{A}_\infty$	211
4.3.2	$\mathcal{M}_{\text{weak}}(C)$ and its homotopy invariance	215
4.3.3	$\mathcal{M}_{\text{weak, def}}(L)$ and its homotopy invariance	216
4.4	Uniqueness of the model of $[0, 1] \times C$	217
4.4.1	Induction on the number filtration I	218
4.4.2	A_K structures and homomorphisms	219
4.4.3	Induction on the number filtration II	220
4.4.4	Unital case I: the unfiltered version	223
4.4.5	Coderivation and Hochschild cohomology	226
4.4.6	Induction on the energy filtration	230
4.4.7	Unital case II: the filtered version	232
4.5	Whitehead theorem in A_∞ algebras	233
4.5.1	Extending A_K homomorphisms to A_{K+1} homomorphisms	234
4.5.2	Proof of Theorem 4.2.45 I: the number filtration	236
4.5.3	Unital case: the unfiltered version	237

4.5.4	Extending filtered A_∞ homomorphism modulo T^{λ_i} to modulo $T^{\lambda_{i+1}}$	239
4.5.5	Proof of Theorem 4.2.45 II: the energy filtration	241
4.6	Homotopy equivalence of A_∞ algebras: the geometric realization	242
4.6.1	Construction of A_∞ homomorphisms	242
4.6.2	Homotopies between A_∞ homomorphisms	249
4.6.3	Compositions	257
4.6.4	Homotopy equivalence and the operator \mathfrak{q} I: changing the cycle in the interior	259
4.6.5	Homotopy equivalence and the operator \mathfrak{q} II: invariance of symplectic diffeomorphisms 1	261
4.6.6	Homotopy equivalence and the operator \mathfrak{q} III: invariance of symplectic diffeomorphisms 2	264
Chapter 5.	Homotopy equivalence of A_∞ bimodules	267
5.1	Novikov rings	267
5.1.1	Reduction to universal Novikov ring	267
5.1.2	Hamiltonian independence of the Novikov ring	270
5.1.3	Floer cohomologies over $\Lambda(L^{(0)}, L^{(1)}; \ell_0)$ and Λ_{nov}	272
5.2	Homotopy equivalences of A_∞ bimodules: the algebraic framework	275
5.2.1	Weakly filtered A_∞ bimodule homomorphisms	275
5.2.2	Deformations of A_∞ bimodule homomorphisms	276
5.2.3	Homotopies between A_∞ bimodule homomorphisms	282
5.2.4	Gauge invariance and the category $\mathfrak{H}\mathfrak{A}_\infty(C_1, C_0)$	288
5.2.5	Obstructions to defining A_∞ bimodule homomorphisms I	291
5.2.6	Whitehead theorem for A_∞ bimodule homomorphisms	292
5.2.7	Obstructions to defining A_∞ bimodule homomorphisms II	294
5.3	Homotopy equivalences of A_∞ bimodules: the geometric realization	296
5.3.1	Construction of filtered A_∞ bimodule homomorphisms	296
5.3.2	Moving Lagrangian submanifolds by Hamiltonian isotopies	306
5.3.3	Homotopies between bimodule homomorphisms	313
5.3.4	Compositions of Hamiltonian isotopies and of bimodule homomorphisms	319
5.3.5	An energy estimate.	321
5.3.6	The operators \mathfrak{q} , \mathfrak{r} and homotopy equivalence	326
5.3.7	Wrap-up of the proof of invariance of Floer cohomologies	327
5.4	Canonical models, formal super schemes and Kuranishi maps	330
5.4.1	Canonical models, Kuranishi maps and bounding cochains	330
5.4.2	The canonical models of filtered A_∞ bimodules	336
5.4.3	Filtered A_∞ bimodules and complex of coherent sheaves	337
5.4.4	Construction of the canonical model	339
5.4.5	Including the operator \mathfrak{q}	347
5.4.6	Wrap-up of the proofs of Theorems F, G, M, N and Corollaries O, P	349
Chapter 6.	Spectral sequences	355
6.1	Statement of the results in Chapter 6	355

6.1.1	The spectral sequence	355
6.1.2	Non-vanishing theorem and a Maslov class conjecture	357
6.1.3	Applications to Lagrangian intersections	360
6.2	A toy model: rational Lagrangian submanifolds	362
6.3	The algebraic construction of the spectral sequence	366
6.3.1	c.f.z.	367
6.3.2	d.g.c.f.z. (differential graded c.f.z.)	369
6.3.3	Construction and convergence	371
6.4	The spectral sequence associated to a Lagrangian submanifold	375
6.4.1	Construction	375
6.4.2	A condition for degeneration: proof of (D.3)	375
6.4.3	Non-vanishing theorem: proof of Theorem 6.1.9.	377
6.4.4	Application to the Maslov class conjecture: proofs of Theorems 6.1.15 and 6.1.17	381
6.4.5	Compatibility with the product structure	382
6.5	Applications to Lagrangian intersections	385
6.5.1	Proof of Theorem H	385
6.5.2	Proof of Theorem I	385
6.5.3	Torsion of the Floer cohomology and Hofer distance: Proof of Theorem J	388
6.5.4	Floer cohomologies of Lagrangian submanifolds that do not intersect cleanly	393
6.5.5	Unobstructedness modulo T^E	395

Volume II

Chapter 7.	Transversality	397
7.1	Construction of the Kuranishi structure	398
7.1.1	Statement of the results in Section 7.1	398
7.1.2	Kuranishi charts on $\mathcal{M}_{k+1}^{\text{main,reg}}(\beta)$: Fredholm theory	401
7.1.3	Kuranishi charts in the complement of $\mathcal{M}_{k+1}^{\text{main,reg}}(\beta)$: gluing	404
7.1.4	Wrap-up of the proof of Propositions 7.1.1 and 7.1.2	418
7.1.5	The Kuranishi structure of $\mathcal{M}_{k+1}^{\text{main}}(M', L', \{J_\rho\}_\rho : \beta; \text{top}(\rho))$: A_∞ map analog of Stasheff cells	425
7.2	Multisections and choice of a countable set of chains	435
7.2.1	Transversality at the diagonal	436
7.2.2	Inductive construction of compatible system of multisections in the Bott-Morse case	437
7.2.3	Perturbed moduli space running out of the Kuranishi neighborhood I	444
7.2.4	Statement of results	445
7.2.5	Proof of Proposition 7.2.35	449
7.2.6	Filtered $A_{n,k}$ structures	458
7.2.7	Construction of filtered $A_{n,K}$ structures	461
7.2.8	Perturbed moduli space running out of the Kuranishi neighborhood II	466
7.2.9	Construction of filtered $A_{n,K}$ homomorphisms	468

7.2.10	Constructions of filtered $A_{n,K}$ homotopies	483
7.2.11	Constructions of filtered A_∞ homotopies I: a short cut	502
7.2.12	Constructions of filtered A_∞ homotopies II: the algebraic framework on homotopy of homotopies	505
7.2.13	Constructions of filtered A_∞ homotopies III: the geometric realization of homotopy of homotopies	534
7.2.14	Bifurcation vs cobordism method: an alternative proof	569
7.3	Construction of homotopy unit	574
7.3.1	Statement of the result and the idea of its proof	574
7.3.2	Proof of Theorem 7.3.1	576
7.3.3	Proof of (3.8.36)	587
7.4	Details of the construction of the operators \mathfrak{p} , \mathfrak{q} and \mathfrak{r}	589
7.4.1	Details of the construction of \mathfrak{p}	589
7.4.2	Construction of \mathfrak{q} I: the $A_{n,K}$ version	595
7.4.3	Construction of \mathfrak{q} II: \mathfrak{q} is an L_∞ homomorphism	596
7.4.4	Construction of \mathfrak{q} III: the homotopy invariance of $\text{Der}(\widehat{B}(C[1]), \widehat{B}(C[1]))$	601
7.4.5	Construction of \mathfrak{q} IV: wrap-up of the proof of Theorem 3.8.32	621
7.4.6	Proof of Theorem Y	625
7.4.7	Algebraic formulation of \mathfrak{r} I: $\text{Der } B(C_1, C_0; D)$ and its homotopy invariance	631
7.4.8	Algebraic formulation of \mathfrak{r} II: via bifurcation argument	637
7.4.9	Algebraic formulation of \mathfrak{r} III: via cobordism argument	640
7.4.10	Algebraic formulation of \mathfrak{p} I: the cyclic bar complex is an L_∞ module	644
7.4.11	Algebraic formulation of \mathfrak{p} II: \mathfrak{p} induces an L_∞ module homomorphism	647
7.5	Compatibility with rational homotopy theory	650
7.5.1	Statement of results	650
7.5.2	Virtual fundamental chain in de Rham theory	652
7.5.3	The Kuranishi structure of $\mathcal{M}_{k+1}^{\text{main}}(\beta_0)$	654
7.5.4	Construction of the A_K homomorphism I	655
7.5.5	Construction of the A_K homomorphism II	663
7.5.6	The A_∞ map to a topological monoid and \mathcal{N}'_{k+1}	669
Chapter 8.	Orientation	675
8.1	Orientation of the moduli space of unmarked discs	675
8.1.1	The case of holomorphic discs	675
8.1.2	The example of non-orientable family index	684
8.1.3	The case of connecting orbits in Floer theory	686
8.1.4	Change of relatively spin structure and orientation	690
8.2	Convention and preliminaries	691
8.3	Orientation of the moduli space of marked discs and of the singular strata of the moduli space	698
8.4	Orientation of $\mathcal{M}_{\ell+1}(\beta; P_1, \dots, P_\ell)$.	703
8.4.1	Definition of the orientation of $\mathcal{M}_{\ell+1}(\beta; P_1, \dots, P_\ell)$	703
8.4.2	Cyclic symmetry and orientation	705
8.5	The filtered A_∞ algebra case	708
8.6	Orientation of the moduli space of constant maps	713

8.7	Orientation of the moduli space of connecting orbits	716
8.8	The Bott-Morse case	719
8.9	Orientations of the top-moduli spaces and the twp-moduli spaces	731
8.9.1	Orientation of $\mathcal{M}_{k+1}^{\text{main}}(M', L', \{J_\rho\}_\rho : \beta; \text{top}(\rho))$	731
8.9.2	Orientation of $\mathcal{M}_{k+1}^{\text{main}}(\{J_\rho\}_\rho : \beta; \text{twp}(\rho); \mathcal{P}_1, \dots, \mathcal{P}_k)$	735
8.10	Homotopy units, the operators $\mathfrak{p}, \mathfrak{q}$, continuous families of perturbations, etc.	738
8.10.1	Homotopy unit	738
8.10.2	Operators $\mathfrak{p}, \mathfrak{q}$	738
8.10.3	Continuous families of perturbations	749
Appendices		753
A1	Kuranishi structures	753
A1.1	Review of the definition of the Kuranishi structure and multi-sections	754
A1.2	Fiber products	764
A1.3	Finite group actions and the quotient space	766
A1.4	A remark on smoothness of coordinate transforms	768
A1.5	Some counter examples	778
A1.6	Some errors in the earlier versions and corrections thereof	779
A2	Singular chains with local coefficients	780
A3	Filtered L_∞ algebras and symmetrization of filtered A_∞ algebras	782
A4	The differential graded Lie algebra homomorphism in Theorem 7.4.132	787
Bibliography		791
