Preface	vii
Chapter 1. From the Real Numbers to the Complex Numbers	1
1. Introduction	1
2. Number systems	1
3. Inequalities and ordered fields	7
4. The complex numbers	15
5. Alternative definitions of \mathbf{C}	17
6. A glimpse at metric spaces	21
Chapter 2. Complex Numbers	25
1. Complex conjugation	25
2. Existence of square roots	27
3. Limits	30
4. Convergent infinite series	32
5. Uniform convergence and consequences	35
6. The unit circle and trigonometry	40
7. The geometry of addition and multiplication	44
8. Logarithms	45
Chapter 3. Complex Numbers and Geometry	49
1. Lines, circles, and balls	49
2. Analytic geometry	52
3. Quadratic polynomials	53
4. Linear fractional transformations	60
5. The Riemann sphere	63

Chapter 4. Power Series Expansions	67
1. Geometric series	67
2. The radius of convergence	70
3. Generating functions	73
4. Fibonacci numbers	74
5. An application of power series	77
6. Rationality	79
Chapter 5. Complex Differentiation	83
1. Definitions of complex analytic function	83
2. Complex differentiation	85
3. The Cauchy-Riemann equations	86
4. Orthogonal trajectories and harmonic functions	89
5. A glimpse at harmonic functions	90
6. What is a differential form?	96
Chapter 6. Complex Integration	99
1. Complex-valued functions	99
2. Line integrals	101
3. Goursat's proof	109
4. The Cauchy integral formula	111
5. A return to the definition of complex analytic function	116
Chapter 7. Applications of Complex Integration	119
1. Singularities and residues	119
2. Evaluating real integrals using complex variables methods	121
3. Fourier transforms	128
4. The Gamma function	131
Chapter 8. Additional Topics	137
1. The minimum-maximum theorem	137
2. The fundamental theorem of algebra	138
3. Winding numbers, zeroes, and poles	141
4. Pythagorean triples	147
5. Elementary mappings	150
6. Quaternions	153
7. Higher-dimensional complex analysis	155
Further reading	158
Bibliography	159
Index	161
