Preface	ix
What Is Statistics?	xv
Chapter 1. Summarizing Data	1
1.1. Data in R	1
1.2. Graphical and Numerical Summaries of Univariate Data	4
1.3. Graphical and Numerical Summaries of Multivariate Data	17
1.4. Summary	20
Exercises	21
Chapter 2. Probability and Random Variables	27
2.1. Introduction to Probability	28
2.2. Additional Probability Rules and Counting Methods	33
2.3. Discrete Distributions	49
2.4. Hypothesis Tests and p-Values	56
2.5. Mean and Variance of a Discrete Random Variable	65
2.6. Joint Distributions	72
2.7. Other Discrete Distributions	80
2.8. Summary	92
Exercises	97
Chapter 3. Continuous Distributions	113
3.1. pdfs and cdfs	113
3.2. Mean and Variance	124
3.3. Higher Moments	126
3.4. Other Continuous Distributions	133

3.5. Kernel Density Estimation	145
3.6. Quantile-Quantile Plots	150
3.7. Joint Distributions	155
3.8. Summary	163
Exercises	166
Chapter 4. Parameter Estimation and Testing	175
4.1. Statistical Models	175
4.2. Fitting Models by the Method of Moments	177
4.3. Estimators and Sampling Distributions	183
4.4. Limit Theorems	191
4.5. Inference for the Mean (Variance Known)	200
4.6. Estimating Variance	208
4.7. Inference for the Mean (Variance Unknown)	212
4.8. Confidence Intervals for a Proportion	223
4.9. Paired Tests	225
4.10. Developing New Tests	227
4.11. Summary	234
Exercises	238
Chapter 5. Likelihood-Based Statistics	251
5.1. Maximum Likelihood Estimators	251
5.2. Likelihood Ratio Tests	266
5.3. Confidence Intervals	274
5.4. Goodness of Fit Testing	277
5.5. Inference for Two-Way Tables	288
5.6. Rating and Ranking Based on Pairwise Comparisons	297
5.7. Bayesian Inference	304
5.8. Summary	312
Exercises	315
Chapter 6. Introduction to Linear Models	323
6.1. The Linear Model Framework	324
6.2. Simple Linear Regression	333
6.3. Inference for Simple Linear Regression	341
6.4. Regression Diagnostics	353
6.5. Transformations in Linear Regression	362
6.6. Categorical Predictors	369
6.7. Categorical Response (Logistic Regression)	377
6.8. Simulating Linear Models to Check Robustness	384

6.9. Summary	387
Exercises	391
Chapter 7. More Linear Models	399
7.1. Additive Models	399
7.2. Assessing the Quality of a Model	413
7.3. One-Way ANOVA	423
7.4. Two-Way ANOVA	455
7.5. Interaction and Higher Order Terms	470
7.6. Model Selection	474
7.7. More Examples	482
7.8. Permutation Tests and Linear Models	493
7.9. Summary	496
Exercises	499
Appendix A. A Brief Introduction to R	507
A.1. Getting Up and Running	507
A.2. Working with Data	513
A.3. Lattice Graphics in R	527
A.4. Functions in R	535
A.5. Some Extras in the <code>fastR</code> Package	542
A.6. More R Topics	544
Exercises	546
Appendix B. Some Mathematical Preliminaries	549
B.1. Sets	550
B.2. Functions	552
B.3. Sums and Products	553
Exercises	555
Appendix C. Geometry and Linear Algebra Review	559
C.1. Vectors, Spans, and Bases	559
C.2. Dot Products and Projections	563
C.3. Orthonormal Bases	567
C.4. Matrices	569
Exercises	575
Appendix D. Review of Chapters 1–4	579
D.1. R Infrastructure	579
D.2. Data	580
D.3. Probability Basics	581
D.4. Probability Toolkit	581

D.5. Inference	582
D.6. Important Distributions	583
Exercises	583
Hints, Answers, and Solutions to Selected Exercises	587
Bibliography	599
Index to R Functions, Packages, and Data Sets	605
Index	609
