Preface	vii
Chapter 1. The Complex Numbers	1
1.1. Definition and Simple Properties	1
1.2. Convergence in $\mathbb{C}$	8
1.3. The Exponential Function	14
1.4. Polar Form for Complex Numbers	19
Chapter 2. Analytic Functions	27
2.1. Continuous Functions	27
2.2. The Complex Derivative	34
2.3. Contour Integrals	41
2.4. Properties of Contour Integrals	47
2.5. Cauchy's Integral Theorem for a Triangle	53
2.6. Cauchy's Theorem for a Convex Set	60
2.7. Properties of the Index Function	66
Chapter 3. Power Series Expansions	75
3.1. Uniform Convergence	75
3.2. Power Series Expansions	82
3.3. Liouville's Theorem	89
3.4. Zeroes and Singularities	95
3.5. The Maximum Modulus Principle	102
Chapter 4. The General Cauchy Theorems	109
4.1. Chains and Cycles	110
4.2. Cauchy's Theorems	118

---

4.3. Laurent Series	124
4.4. The Residue Theorem	131
4.5. Rouché's Theorem and Inverse Functions	137
4.6. Homotopy	141
Chapter 5. Residue Theory	153
5.1. Computing Residues	153
5.2. Evaluating Integrals Using Residues	159
5.3. Fourier Transforms	166
5.4. The Laplace and Mellin Transforms	175
5.5. Summing Infinite Series	179
Chapter 6. Conformal Mappings	185
6.1. Definition and Examples	185
6.2. The Riemann Sphere	191
6.3. Linear Fractional Transformations	197
6.4. The Riemann Mapping Theorem	202
6.5. The Poisson Integral	207
6.6. The Dirichlet Problem	213
Chapter 7. Analytic Continuation and the Picard Theorems	221
7.1. The Schwarz Reflection Principle	222
7.2. Continuation Along a Curve	226
7.3. Analytic Covering Maps	232
7.4. The Picard Theorems	236
Chapter 8. Infinite Products	245
8.1. Convergence of Infinite Products	245
8.2. Weierstrass Products	251
8.3. Entire Functions of Finite Order	257
8.4. Hadamard's Factorization Theorem	262
Chapter 9. The Gamma and Zeta Functions	269
9.1. Euler's Gamma Function	270
9.2. The Riemann Zeta Function	275
9.3. Properties of $\zeta$	281
9.4. The Riemann Hypothesis and Prime Numbers	287
9.5. A Proof of the Prime Number Theorem	291
Bibliography	299
Index	301
