Preface	xi
Chapter 1. Basic Principles	1
1.1. Mathematical induction	1
1.2. Real numbers	2
1.3. Completeness principles	5
1.4. Numerical sequences	12
1.5. Infinite series	18
1.6. Continuous functions and derivatives	22
1.7. The Riemann integral	27
1.8. Uniform convergence	33
1.9. Historical remarks	39
1.10. Metric spaces	41
1.11. Complex numbers	42
Exercises	46
Chapter 2. Special Sequences	51
2.1. The number e	51
2.2. Irrationality of π	55
2.3. Euler's constant	56
2.4. Vieta's product formula	60
2.5. Wallis product formula	61
2.6. Stirling's formula	63
Exercises	66

Chapter 3. Power Series and Related Topics	73
3.1. General properties of power series	73
3.2. Abel's theorem	76
3.3. Cauchy products and Mertens' theorem	81
3.4. Taylor's formula with remainder	83
3.5. Newton's binomial series	87
3.6. Composition of power series	89
3.7. Euler's sum	92
3.8. Continuous nowhere differentiable functions	98
Exercises	102
Chapter 4. Inequalities	109
4.1. Elementary inequalities	109
4.2. Cauchy's inequality	112
4.3. Arithmetic–geometric mean inequality	117
4.4. Integral analogues	118
4.5. Jensen's inequality	119
4.6. Hilbert's inequality	122
Exercises	127
Chapter 5. Infinite Products	131
5.1. Basic concepts	131
5.2. Absolute convergence	135
5.3. Logarithmic series	136
5.4. Uniform convergence	138
Exercises	141
Chapter 6. Approximation by Polynomials	145
6.1. Interpolation	145
6.2. Weierstrass approximation theorem	151
6.3. Landau's proof	153
6.4. Bernstein polynomials	157
6.5. Best approximation	160
6.6. Stone–Weierstrass theorem	164
6.7. Refinements of Weierstrass theorem	168
Exercises	171

Chapter 7. Tauberian Theorems	179
7.1. Summation of divergent series	179
7.2. Tauber's theorem	182
7.3. Theorems of Hardy and Littlewood	183
7.4. Karamata's proof	185
7.5. Hardy's power series	190
Exercises	193
Chapter 8. Fourier Series	197
8.1. Physical origins	197
8.2. Orthogonality relations	199
8.3. Mean-square approximation	200
8.4. Convergence of Fourier series	203
8.5. Examples	207
8.6. Gibbs' phenomenon	212
8.7. Arithmetic means of partial sums	215
8.8. Continuous functions with divergent Fourier series	219
8.9. Fourier transforms	221
8.10. Inversion of Fourier transforms	228
8.11. Poisson summation formula	232
Exercises	236
Chapter 9. The Gamma Function	247
9.1. Probability integral	247
9.2. Gamma function	249
9.3. Beta function	251
9.4. Legendre's duplication formula	252
9.5. Euler's reflection formula	253
9.6. Infinite product representation	255
9.7. Generalization of Stirling's formula	257
9.8. Bohr–Mollerup theorem	257
9.9. A special integral	261
Exercises	262

Chapter 10. Two Topics in Number Theory	269
10.1. Equidistributed sequences	269
10.2. Weyl's criterion	271
10.3. The Riemann zeta function	276
10.4. Connection with the gamma function	280
10.5. Functional equation	282
Exercises	286
Chapter 11. Bernoulli Numbers	291
11.1. Calculation of Bernoulli numbers	291
11.2. Sums of positive powers	294
11.3. Euler's sums	295
11.4. Bernoulli polynomials	297
11.5. Euler–Maclaurin summation formula	300
11.6. Applications of Euler–Maclaurin formula	302
Exercises	305
Chapter 12. The Cantor Set	309
12.1. Cardinal numbers	309
12.2. Lebesgue measure	313
12.3. The Cantor set	315
12.4. The Cantor–Scheffer function	317
12.5. Space-filling curves	320
Exercises	323
Chapter 13. Differential Equations	327
13.1. Existence and uniqueness of solutions	327
13.2. Wronskians	333
13.3. Power series solutions	336
13.4. Bessel functions	343
13.5. Hypergeometric functions	348
13.6. Oscillation and comparison theorems	354
13.7. Refinements of Sturm's theory	358
Exercises	360

Chapter 14. Elliptic Integrals	369
14.1. Standard forms	369
14.2. Fagnano's duplication formula	371
14.3. The arithmetic–geometric mean	373
14.4. The Legendre relation	381
Exercises	384
Index of Names	387
Subject Index	389
