To the Instructor	xi
To the Student	xiii
Introduction and Outline of the Book	xvii
Acknowledgments	xxi
Part 1. Rebuilding the Calculus Building	
Chapter 1. The Real Number System Revisited	3
1.1. The Algebraic Axioms	5
1.2. The Order Axioms	7
1.3. Absolute Value, Distance, and Neighborhoods	9
1.4. Natural Numbers and Mathematical Induction	12
1.5. The Axiom of Completeness and Its Uses	21
1.6. The Complex Number System	33
Notes on Essence and Generalizability	39
Exercises	41
Chapter 2. Sequences and Series of Real Numbers	47
2.1. Real Sequences, Their Convergence, and Boundedness	48
2.2. Subsequences, Limit Superior and Limit Inferior	66
2.3. Cauchy Sequences	74
2.4. Sequences in Closed and Bounded Intervals	76
2.5. Series: Revisiting Some Convergence Tests	78
2.6. Rearrangements of Series	90
2.7. Power Series	92

Notes on Essence and Generalizability	96
Exercises	97
Chapter 3. Limit and Continuity of Real Functions	103
3.1. Limit Points and Some Other Classes of Points in \mathbb{R}	104
3.2. A More General Definition of Limit	112
3.3. Limit at Infinity	126
3.4. One-Sided Limits	130
3.5. Continuity and Two Kinds of Discontinuity	136
3.6. Continuity on $[a, b]$: Results and Applications	142
3.7. Uniform Continuity	149
Notes on Essence and Generalizability	151
Exercises	152
Chapter 4. Derivative and Differentiation	159
4.1. The Why and What of the Concept of Derivative	160
4.2. The Basic Properties of Derivative	168
4.3. Local Extrema and Derivative	172
4.4. The Mean Value Theorem: More Applications of Derivative	175
4.5. Taylor Series: A First Glance	181
4.6. Taylor's Theorem and the Convergence of Taylor Series	185
Notes on Essence and Generalizability	189
Exercises	190
Chapter 5. The Riemann Integral	193
5.1. Motivation: The Area Problem	194
5.2. The Riemann Integral: Definition and Basic Results	197
5.3. Some Integrability Theorems	214
5.4. Antiderivatives and the Fundamental Theorem of Calculus	220
Notes on Essence and Generalizability	228
Exercises	228
Part 2. Abstraction and Generalization	
Chapter 6. Basic Theory of Metric Spaces	235
6.1. A First Generalization: The Definition of Metric Space	239
6.2. Neighborhoods and Some Classes of Points	245
6.3. Open and Closed Sets	255
6.4. Metric Subspaces	262
6.5. Boundedness and Total Boundedness	265
Notes on Essence and Generalizability	269

Exercises	270
Chapter 7. Sequences in General Metric Spaces	275
7.1. Convergence and Divergence in Metric Spaces	275
7.2. Cauchy Sequences and Complete Metric Spaces	284
7.3. Compactness: Definition and Some Basic Results	287
7.4. Compactness: Some Equivalent Forms	290
7.5. Perfect Sets and Cantor's Set	294
Notes on Essence and Generalizability	296
Exercises	296
Chapter 8. Limit and Continuity of Functions in Metric Spaces	299
8.1. The Definition of Limit in General Metric Spaces	299
8.2. Continuity and Uniform Continuity	302
8.3. Continuity and Compactness	307
8.4. Connectedness and Its Relation to Continuity	310
8.5. Banach's Fixed Point Theorem	314
Notes on Essence and Generalizability	316
Exercises	317
Chapter 9. Sequences and Series of Functions	319
9.1. Sequences of Functions and Their Pointwise Convergence	319
9.2. Uniform Convergence	323
9.3. Weierstrass's Approximation Theorem	328
9.4. Series of Functions and Their Convergence	332
Notes on Essence and Generalizability	333
Exercises	334
Appendix	337
Real Sequences and Series	337
Limit and Continuity of Functions	339
The Concepts of Derivative and Differentiability	340
The Riemann Integral	340
Bibliography	343
Index	345
