Acknowledgements	xiii
Preface	xv
Course Outlines	xix
Part 1. Classical Algorithms	
Chapter 1. Efficient Multiplication, I	3
1.1. Introduction	3
1.2. Babylonian Multiplication	4
1.3. Horner's Algorithm	5
1.4. Fast Multiplication	6
1.5. Strassen's Algorithm	8
1.6. Eigenvalues, Eigenvectors and the Fibonacci Numbers	9
1.7. Exercises	11
Chapter 2. Efficient Multiplication, II	21
2.1. Binomial Coefficients	21
2.2. Pascal's Triangle	22
2.3. Dimension	24
2.4. From the Pascal to the Sierpinski Triangle	26
2.5. The Euclidean Algorithm	28
2.6. Exercises	35
Part 2. Introduction to Linear Programming	
Chapter 3. Introduction to Linear Programming	47

3.1. Linear Algebra	48
3.2. Finding Solutions	50
3.3. Calculus Review: Local versus Global	51
3.4. An Introduction to the Diet Problem	54
3.5. Solving the Diet Problem	55
3.6. Applications of the Diet Problem	59
3.7. Exercises	60
Chapter 4. The Canonical Linear Programming Problem	67
4.1. Real Analysis Review	68
4.2. Canonical Forms and Quadratic Equations	70
4.3. Canonical Forms in Linear Programming: Statement	71
4.4. Canonical Forms in Linear Programming: Conversion	73
4.5. The Diet Problem: Round 2	75
4.6. A Short Theoretical Aside: Strict Inequalities	76
4.7. Canonical is Not Always Best	77
4.8. The Oil Problem	78
4.9. Exercises	79
Chapter 5. Symmetries and Dualities	83
5.1. Tic-Tac-Toe and a Chess Problem	83
5.2. Duality and Linear Programming	87
5.3. Appendix: Fun Versions of Tic-Tac-Toe	88
5.4. Exercises	90
Chapter 6. Basic Feasible and Basic Optimal Solutions	95
6.1. Review of Linear Independence	95
6.2. Basic Feasible and Basic Optimal Solutions	96
6.3. Properties of Basic Feasible Solutions	97
6.4. Optimal and Basic Optimal Solutions	99
6.5. Efficiency and Euclid's Prime Theorem	100
6.6. Exercises	102
Chapter 7. The Simplex Method	107
7.1. The Simplex Method: Preliminary Assumptions	107
7.2. The Simplex Method: Statement	108
7.3. Phase II implies Phase I	109
7.4. Phase II of the Simplex Method	110
7.5. Run-time of the Simplex Method	113
7.6. Efficient Sorting	113
7.7. Exercises	115

Part 3. Advanced Linear Programming

Chapter 8. Integer Programming	121
8.1. The Movie Theater Problem	122
8.2. Binary Indicator Variables	125
8.3. Logical Statements	126
8.4. Truncation, Extrema and Absolute Values	128
8.5. Linearizing Quadratic Expressions	130
8.6. The Law of the Hammer and Sudoku	131
8.7. Bus Route Example	134
8.8. Exercises	135
Chapter 9. Integer Optimization	143
9.1. Maximizing a Product	143
9.2. The Knapsack Problem	146
9.3. Solving Integer Programs: Branch and Bound	147
9.4. Exercises	150
Chapter 10. Multi-Objective and Quadratic Programming	153
10.1. Multi-Objective Linear Programming	153
10.2. Quadratic Programming	154
10.3. Example: Quadratic Objective Function	155
10.4. Removing Quadratic (and Higher Order) Terms in Constraints	156
10.5. Summary	157
10.6. Exercises	157
Chapter 11. The Traveling Salesman Problem	161
11.1. Integer Linear Programming Version of the TSP	161
11.2. Greedy Algorithm to the TSP	164
11.3. The Insertion Algorithm	165
11.4. Sub-problems Method	166
11.5. Exercises	167
Chapter 12. Introduction to Stochastic Linear Programming	169
12.1. Deterministic and Stochastic Oil Problems	170
12.2. Expected Value approach	171
12.3. Recourse Approach	172
12.4. Probabilistic Constraints	174
12.5. Exercises	175

Part 4. Fixed Point Theorems

Chapter 13. Introduction to Fixed Point Theorems	179
--	-----

13.1.	Definitions and Uses	179
13.2.	Examples	181
13.3.	Real Analysis Preliminaries	182
13.4.	One-Dimensional Fixed Point Theorem	184
13.5.	Newton's Method versus Divide and Conquer	186
13.6.	Equivalent Regions and Fixed Points	188
13.7.	Exercises	191
Chapter 14.	Contraction Maps	201
14.1.	Definitions	201
14.2.	Fixed Points of Contraction Maps	202
14.3.	Introduction to Differential Equations	205
14.4.	Real Analysis Review	208
14.5.	First Order Differential Equations Theorem	210
14.6.	Examples of Picard's Iteration Method	213
14.7.	Exercises	215
Chapter 15.	Sperner's Lemma	221
15.1.	Statement of Sperner's Lemma	221
15.2.	Proof Strategies for Sperner's Lemma	224
15.3.	Proof of Sperner's Lemma	226
15.4.	Rental Harmony	228
15.5.	Exercises	231
Chapter 16.	Brouwer's Fixed Point Theorem	239
16.1.	Bolzano-Weierstrass Theorem	239
16.2.	Barycentric Coordinates	240
16.3.	Preliminaries for Brouwer's Fixed Point Theorem	241
16.4.	Proof of Brouwer's Fixed Point Theorem	244
16.5.	Nash Equilibrium	245
16.6.	Exercises	249
Part 5. Advanced Topics		
Chapter 17.	Gale-Shapley Algorithm	255
17.1.	Introduction	255
17.2.	Three Parties	257
17.3.	Gale-Shapley Algorithm	258
17.4.	Generalization	261
17.5.	Applications	262
17.6.	Exercises	264

Chapter 18. Interpolating Functions	267
18.1. Lagrange Interpolation	268
18.2. Interpolation Error	270
18.3. Chebyshev Polynomials and Interpolation	272
18.4. Splines	274
18.5. Exercises	278
Chapter 19. The Four Color Problem	283
19.1. A Brief History	284
19.2. Preliminaries	286
19.3. Birkhoff and the Modern Proof	293
19.4. Appel-Haken Proof	294
19.5. Computational Improvements	297
19.6. Exercises	301
Chapter 20. The Kepler Conjecture	303
20.1. Introduction	303
20.2. Sphere Packing	306
20.3. Challenges in Proving the Kepler Conjecture	308
20.4. Local Density Inequalities	310
20.5. Computer-Aided Proof	313
20.6. Exercises	315
Bibliography	317
Index	323
