Preface	xiii
For students: How to use this book	xvii
Chapter 1. Intervals	1
1.1. Distance and neighborhoods	1
1.2. Interior of a set	3
Chapter 2. Topology of the real line	5
2.1. Open subsets of \mathbb{R}	5
2.2. Closed subsets of \mathbb{R}	7
Chapter 3. Continuous functions from \mathbb{R} to \mathbb{R}	11
3.1. Continuity—as a local property	11
3.2. Continuity—as a global property	13
3.3. Functions defined on subsets of \mathbb{R}	16
Chapter 4. Sequences of real numbers	21
4.1. Convergence of sequences	21
4.2. Algebraic combinations of sequences	24
4.3. Sufficient condition for convergence	25
4.4. Subsequences	29
Chapter 5. Connectedness and the intermediate value theorem	33
5.1. Connected subsets of \mathbb{R}	33
5.2. Continuous images of connected sets	35
5.3. Homeomorphisms	37

Chapter 6. Compactness and the extreme value theorem	39
6.1. Compactness	40
6.2. Examples of compact subsets of \mathbb{R}	41
6.3. The extreme value theorem	43
Chapter 7. Limits of real valued functions	45
7.1. Definition	45
7.2. Continuity and limits	46
Chapter 8. Differentiation of real valued functions	49
8.1. The families \mathfrak{D} and \mathfrak{o}	49
8.2. Tangency	52
8.3. Linear approximation	53
8.4. Differentiability	55
Chapter 9. Metric spaces	59
9.1. Definitions	60
9.2. Examples	60
9.3. Equivalent metrics	64
Chapter 10. Interiors, closures, and boundaries	67
10.1. Definitions and examples	67
10.2. Interior points	68
10.3. Accumulation points and closures	69
Chapter 11. The topology of metric spaces	71
11.1. Open and closed sets	71
11.2. The relative topology	74
Chapter 12. Sequences in metric spaces	77
12.1. Convergence of sequences	77
12.2. Sequential characterizations of topological properties	78
12.3. Products of metric spaces	79
Chapter 13. Uniform convergence	81
13.1. The uniform metric on the space of bounded functions	81
13.2. Pointwise convergence	83
Chapter 14. More on continuity and limits	85
14.1. Continuous functions	85
14.2. Maps into and from products	91
14.3. Limits	93

Chapter 15. Compact metric spaces	99
15.1. Definition and elementary properties	99
15.2. The extreme value theorem	101
15.3. Dini's theorem	102
Chapter 16. Sequential characterization of compactness	103
16.1. Sequential compactness	103
16.2. Conditions equivalent to compactness	105
16.3. Products of compact spaces	106
16.4. The Heine–Borel theorem	107
Chapter 17. Connectedness	109
17.1. Connected spaces	109
17.2. Arcwise connected spaces	111
Chapter 18. Complete spaces	113
18.1. Cauchy sequences	113
18.2. Completeness	114
18.3. Completeness vs. compactness	115
Chapter 19. A fixed point theorem	117
19.1. The contractive mapping theorem	117
19.2. Application to integral equations	122
Chapter 20. Vector spaces	125
20.1. Definitions and examples	125
20.2. Linear combinations	130
20.3. Convex combinations	132
Chapter 21. Linearity	135
21.1. Linear transformations	135
21.2. The algebra of linear transformations	139
21.3. Matrices	142
21.4. Determinants	146
21.5. Matrix representations of linear transformations	148
Chapter 22. Norms	153
22.1. Norms on linear spaces	153
22.2. Norms induce metrics	155
22.3. Products	156
22.4. The space $\mathcal{B}(S, V)$	160
Chapter 23. Continuity and linearity	163
23.1. Bounded linear transformations	163

23.2.	The Stone–Weierstrass theorem	168
23.3.	Banach spaces	171
23.4.	Dual spaces and adjoints	172
Chapter 24.	The Cauchy integral	175
24.1.	Uniform continuity	175
24.2.	The integral of step functions	178
24.3.	The Cauchy integral	181
Chapter 25.	Differential calculus	189
25.1.	\mathfrak{O} and \mathfrak{o} functions	189
25.2.	Tangency	192
25.3.	Differentiation	193
25.4.	Differentiation of curves	197
25.5.	Directional derivatives	199
25.6.	Functions mapping into product spaces	201
Chapter 26.	Partial derivatives and iterated integrals	203
26.1.	The mean value theorem(s)	203
26.2.	Partial derivatives	209
26.3.	Iterated integrals	214
Chapter 27.	Computations in \mathbb{R}^n	217
27.1.	Inner products	217
27.2.	The gradient	220
27.3.	The Jacobian matrix	225
27.4.	The chain rule	226
Chapter 28.	Infinite series	233
28.1.	Convergence of series	234
28.2.	Series of positive scalars	239
28.3.	Absolute convergence	240
28.4.	Power series	241
Chapter 29.	The implicit function theorem	251
29.1.	The inverse function theorem	252
29.2.	The implicit function theorem	256
Chapter 30.	Higher order derivatives	265
30.1.	Multilinear functions	265
30.2.	Second order differentials	271
30.3.	Higher order differentials	276

Appendix A. Quantifiers	277
Appendix B. Sets	279
Appendix C. Special subsets of \mathbb{R}	283
Appendix D. Logical connectives	285
D.1. Disjunction and conjunction	285
D.2. Implication	287
D.3. Restricted quantifiers	288
D.4. Negation	289
Appendix E. Writing mathematics	291
E.1. Proving theorems	291
E.2. Checklist for writing mathematics	292
E.3. Fraktur and Greek alphabets	295
Appendix F. Set operations	297
F.1. Unions	297
F.2. Intersections	299
F.3. Complements	301
Appendix G. Arithmetic	303
G.1. The field axioms	303
G.2. Uniqueness of identities	305
G.3. Uniqueness of inverses	305
G.4. Another consequence of uniqueness	306
Appendix H. Order properties of \mathbb{R}	309
Appendix I. Natural numbers and mathematical induction	313
Appendix J. Least upper bounds and greatest lower bounds	317
J.1. Upper and lower bounds	317
J.2. Least upper and greatest lower bounds	318
J.3. The least upper bound axiom for \mathbb{R}	320
J.4. The Archimedean property	321
Appendix K. Products, relations, and functions	323
K.1. Cartesian products	323
K.2. Relations	324
K.3. Functions	325
Appendix L. Properties of functions	327
L.1. Images and inverse images	327
L.2. Composition of functions	328

L.3. The identity function	329
L.4. Diagrams	329
L.5. Restrictions and extensions	330
Appendix M. Functions that have inverses	331
M.1. Injections, surjections, and bijections	331
M.2. Inverse functions	334
Appendix N. Products	337
Appendix O. Finite and infinite sets	339
Appendix P. Countable and uncountable sets	343
Bibliography	347
Index	349
