# Contents

Chapter 1. Introduction	1
1.1. Design of this book	1
1.2. Parts V–VII: How many two-dimensional geometries are there?	3
1.3. Parts IV–VII: Some needed multivariable calculus and linear algebra facts	4
1.4. References and notation	5
<b>Part I. Neutral geometry</b>	
Chapter 2. Euclid’s postulates for plane geometry	9
2.1. Neutral geometry	9
2.2. Sum of angles in a triangle in <b>NG</b>	12
2.3. Are there rectangles in <b>NG</b> ?	14
<b>Part II. Euclidean (plane) geometry</b>	
Chapter 3. Rectangles and cartesian coordinates	19
3.1. Euclid’s Fifth Postulate, the Parallel Postulate	19
3.2. The distance formula in <b>EG</b>	21
3.3. Law of Sines and Law of Cosines	22
3.4. Dilations in <b>EG</b>	24
3.5. Similarity in <b>EG</b>	26
Chapter 4. Concurrence and circles in Euclidean geometry	29
4.1. Concurrence theorems in <b>EG</b> , Ceva’s theorem	29
4.2. Properties of circles in <b>EG</b>	32
4.3. Circles and sines and cosines	34

---

4.4. Cross-ratio of points on a circle	35
4.5. Ptolemy's theorem	37
<b>Part III. Spherical geometry</b>	
Chapter 5. Surface area and volume of the $R$ -sphere in Euclidean three-space	41
5.1. Volumes of pyramids	41
5.2. Magnification principle	42
5.3. Relation between volume and surface area of a sphere	43
5.4. Surface area	43
5.5. Areas on spheres in Euclidean three-space	46
<b>Part IV. Usual dot-product for three-dimensional Euclidean space</b>	
Chapter 6. Euclidean three-space as a metric space	51
6.1. Points and vectors in Euclidean three-space	51
6.2. Curves in Euclidean three-space and vectors tangent to them	56
6.3. Surfaces in Euclidean three-space and vectors tangent to them	59
Chapter 7. Transformations	61
7.1. Rigid motions of Euclidean three-space	61
7.2. Orthogonal matrices	63
7.3. Linear fractional transformations	64
<b>Part V. <math>K</math>-geometry</b>	
Chapter 8. Changing coordinates	71
8.1. Bringing the North Pole of the $R$ -sphere to $(0, 0, 1)$	71
8.2. $K$ -geometry: Euclidean lengths and angles in $(x, y, z)$ -coordinates	73
8.3. Congruences, that is, rigid motions	76
Chapter 9. Uniform coordinates for the two-dimensional geometries	79
9.1. The two-dimensional geometries in $(x, y, z)$ -coordinates	79
9.2. Central projection	83
9.3. Stereographic projection	89
9.4. Relationship between central and stereographic projection coordinates	94
<b>Part VI. Return to spherical geometry</b>	
Chapter 10. Spherical geometry from an advanced viewpoint	99
10.1. Rigid motions in spherical geometry	99
10.2. Spherical geometry is homogeneous	101
10.3. Lines in spherical geometry	104
10.4. Central projection in <b>SG</b>	107

---

10.5. Stereographic projection in <b>SG</b>	108
<b>Part VII. Hyperbolic geometry</b>	
Chapter 11. The curvature $K$ becomes negative	113
11.1. The world sheet and the light cone	113
11.2. Hyperbolic geometry is homogeneous	115
11.3. Lines in hyperbolic geometry	119
11.4. Central projection in <b>HG</b>	122
11.5. Stereographic projection in <b>HG</b>	128
Definitions	133
Bibliography	139
Index	141
