
Contents

To the Instructor	ix
To the Student	xiii
Chapter 1. Logic and Proofs	1
1.1. Statements, Negation, and Connectives	1
1.2. Quantification	4
1.3. Truth Tables and Applications	6
Exercises	8
Chapter 2. An Introduction to Sets	15
2.1. Specifying Sets	15
2.2. Complex Numbers	17
2.3. Sets and Logic, Partitions	23
Exercises	28
Chapter 3. The Integers	33
3.1. Counting and Arithmetic Operations	33
3.2. Consequences of the Axioms	38
3.3. The Division Algorithm	40
Exercises	42
Chapter 4. Mappings and Relations	47
4.1. Mappings, Images, and Preimages	48
4.2. Surjectivity and Injectivity	51

4.3. Composition and Inversion	54
4.4. Equivalence Relations	58
Exercises	63
Chapter 5. Induction and Recursion	71
5.1. Mathematical Induction	71
5.2. Applications	77
5.3. The Binomial Theorem	84
Exercises	86
Chapter 6. Binary Operations	93
6.1. Definitions and Equivalence	93
6.2. Algebraic Properties of Binary Operations	96
Exercises	99
Chapter 7. Groups	107
7.1. Definition and Basic Properties	107
7.2. The Law of Exponents	109
7.3. Subgroups	111
7.4. Generated Subgroups	113
7.5. Groups of Complex Numbers	117
Exercises	120
Chapter 8. Divisibility and Congruences	125
8.1. Residue Classes of Integers	126
8.2. Greatest Common Divisors	129
Exercises	131
Chapter 9. Primes	135
9.1. Definitions	135
9.2. Prime Factorizations	137
Exercises	141
Chapter 10. Multiplicative Inverses of Residue Classes	145
10.1. Invertibility	146
10.2. Linear Congruences	150
Exercises	155
Chapter 11. Linear Transformations	159
11.1. The Cartesian Vector Space	159

11.2. Plane Transformations	162
11.3. Cartesian Transformations	167
Exercises	172
Chapter 12. Isomorphism	181
12.1. Properties and Examples	181
12.2. Classification of Cyclic Groups	185
Exercises	188
Chapter 13. The Symmetric Group	193
13.1. Disjoint Cycle Structure of a Permutation	193
13.2. Cycle Multiplication	197
13.3. Parity and the Alternating Group	201
Exercises	204
Chapter 14. Examples of Finite Groups	209
14.1. Cayley's Theorem	209
14.2. The Dihedral and Dicyclic Groups	211
14.3. Miscellaneous Examples	214
Exercises	220
Chapter 15. Cosets	225
15.1. Definitions and Examples	225
15.2. Normal Subgroups	229
Exercises	231
Chapter 16. Homomorphisms	237
16.1. Definition and Properties	237
16.2. Homomorphisms and Cyclic Groups	240
16.3. Quotient Groups	241
16.4. The Isomorphism Theorems	244
Exercises	246
Chapter 17. Group Actions	253
17.1. Actions and Automorphisms	253
17.2. Orbits and Stabilizers	256
17.3. The Sylow Theorems	258
17.4. Classification of Finite Abelian Groups	261
17.5. Notes on the Classification of Finite Groups	264
17.6. Finitely Generated Abelian Groups	269

Exercises	271
Chapter 18. Euclidean Geometry	275
18.1. The Cartesian Plane and Isometries	275
18.2. Structure of Cartesian Isometries	278
18.3. The Euclidean Isometry Group	280
18.4. Reflections	284
18.5. Discrete Groups of Plane Motions	286
Exercises	291
Appendix A. Euler's Formula	297
Index	299
