Preface	ix
Some basic notation	xiii
Chapter 1. Single differential equations	1
1.1. The exponential and trigonometric functions	3
Exercises	9
1.2. First order linear equations	13
Exercises	16
1.3. Separable equations	17
Exercises	21
1.4. Second order equations—reducible cases	21
Exercises	23
1.5. Newton's equations for motion in one dimension	23
Exercises	26
1.6. The pendulum	27
Exercises	34
1.7. Motion with resistance	35
Exercises	36
1.8. Linearization	37
Exercises	38
1.9. Second order constant-coefficient linear equations—homogeneous	38
Exercises	43
1.10. Nonhomogeneous equations I—undetermined coefficients	44
Exercises	48
1.11. Forced pendulum—resonance	49

Exercises	51
1.12. Spring motion	52
Exercises	53
1.13. RLC circuits	53
Exercises	56
1.14. Nonhomogeneous equations II–variation of parameters	56
Exercises	58
1.15. Variable coefficient second order equations	59
Exercises	61
1.16. Bessel’s equation	62
Exercises	67
1.17. Higher order linear equations	68
Exercises	69
1.18. The Laplace transform	70
Exercises	77
1.A. The genesis of Bessel’s equation: PDE in polar coordinates	78
1.B. Euler’s gamma function	80
1.C. Differentiating power series	82
Chapter 2. Linear algebra	87
2.1. Vector spaces	88
Exercises	89
2.2. Linear transformations and matrices	90
Exercises	93
2.3. Basis and dimension	94
Exercises	98
2.4. Matrix representation of a linear transformation	99
Exercises	101
2.5. Determinants and invertibility	102
Exercises	107
2.6. Eigenvalues and eigenvectors	110
Exercises	111
2.7. Generalized eigenvectors and the minimal polynomial	112
Exercises	117
2.8. Triangular matrices	118
Exercises	120
2.9. Inner products and norms	121
Exercises	125
2.10. Norm, trace, and adjoint of a linear transformation	126

Exercises	128
2.11. Self-adjoint and skew-adjoint transformations	129
Exercises	131
2.12. Unitary and orthogonal transformations	132
Exercises	135
2.A. The Jordan canonical form	138
2.B. Schur's upper triangular representation	139
2.C. The fundamental theorem of algebra	140
Chapter 3. Linear systems of differential equations	143
3.1. The matrix exponential	144
Exercises	150
3.2. Exponentials and trigonometric functions	153
Exercises	155
3.3. First order systems derived from higher order equations	156
Exercises	158
3.4. Nonhomogeneous equations and Duhamel's formula	158
Exercises	160
3.5. Simple electrical circuits	161
Exercises	165
3.6. Second order systems	166
Exercises	171
3.7. Curves in \mathbb{R}^3 and the Frenet-Serret equations	172
Exercises	177
3.8. Variable coefficient systems	178
Exercises	182
3.9. Variation of parameters and Duhamel's formula	184
Exercises	186
3.10. Power series expansions	186
Exercises	193
3.11. Regular singular points	194
Exercises	204
3.A. Logarithms of matrices	206
3.B. The matrix Laplace transform	207
3.C. Complex analytic functions	210
Chapter 4. Nonlinear systems of differential equations	213
4.1. Existence and uniqueness of solutions	215
Exercises	221
4.2. Dependence of solutions on initial data and other parameters	224

Exercises	227
4.3. Vector fields, orbits, and flows	228
Exercises	242
4.4. Gradient vector fields	245
Exercises	251
4.5. Newtonian equations	251
Exercises	255
4.6. Central force problems and two-body planetary motion	256
Exercises	262
4.7. Variational problems and the stationary action principle	264
Exercises	269
4.8. The brachistochrone problem	274
Exercises	278
4.9. The double pendulum	278
Exercises	282
4.10. Momentum-quadratic Hamiltonian systems	282
Exercises	286
4.11. Numerical study–difference schemes	287
Exercises	294
4.12. Limit sets and periodic orbits	295
Exercises	304
4.13. Predator-prey equations	306
Exercises	316
4.14. Competing species equations	320
Exercises	324
4.15. Chaos in multidimensional systems	326
Exercises	336
4.A. The derivative in several variables	337
4.B. Convergence, compactness, and continuity	340
4.C. Critical points that are saddles	343
4.D. Blown up phase portrait at a critical point	352
4.E. Periodic solutions of $x'' + x = \varepsilon\psi(x)$	358
4.F. A dram of potential theory	364
4.G. Brouwer's fixed-point theorem	366
4.H. Geodesic equations on surfaces	368
4.I. Rigid body motion in \mathbb{R}^n and geodesics on $SO(n)$	371
Bibliography	381
Index	385
