

## CONTENTS

<b>1. Introduction</b> .....	1
1.1. Uhlenbeck spaces .....	1
1.2. Main geometric object .....	2
1.3. Main algebraic object: $\mathcal{W}$ -algebras .....	2
1.4. The main result: localized form .....	4
1.5. Relation to previous works .....	5
1.6. Hyperbolic restriction .....	8
1.7. Sketch of the proof .....	9
1.8. Relation to previous works – technical parts .....	10
1.9. The main result: integral form .....	12
1.10. Remarks about non-simply laced case .....	13
1.11. Further questions and open problems .....	14
1.12. Organization of the paper .....	15
1.13. Some notational conventions .....	15
1.14. Acknowledgments .....	16
<b>2. Preliminaries</b> .....	19
2.1. Instanton number .....	19
2.2. Moduli of framed $G$ -bundles .....	19
2.3. Stratification .....	20
2.4. Factorization .....	20
<b>3. Localization</b> .....	23
3.1. General Statement .....	23
3.2. The case of Ext algebras .....	24
3.3. Attractors and repellents .....	24
3.4. Hyperbolic restriction .....	25
3.5. Hyperbolic semi-smallness .....	26
3.6. Recovering the integral form .....	27
<b>4. Hyperbolic restriction on Uhlenbeck spaces</b> .....	29
4.1. A category of semisimple perverse sheaves .....	29
4.2. Fixed points .....	30
4.3. Polarization .....	31

4.4. Definition of hyperbolic restriction functor .....	32
4.5. Associativity .....	33
4.6. Preservation of perversity .....	34
4.7. Hyperbolic restriction on $\text{Bun}_L^d$ .....	34
4.8. Space $U^d$ and its base .....	35
4.9. Irreducible components .....	38
4.10. A pairing on $U^d$ .....	39
4.11. Another base of $U^d$ .....	39
4.12. Dual base .....	41
4.13. $\text{Aut}(G)$ invariance .....	42
<b>5. Hyperbolic restriction in type A .....</b>	<b>45</b>
5.1. Gieseker-Uhlenbeck .....	45
5.2. Heisenberg operators .....	46
5.3. Fixed points and polarization .....	47
5.4. Stable envelope .....	49
5.5. Tensor product module .....	50
5.6. Sheaf theoretic analysis .....	50
5.7. The associativity of stable envelopes .....	51
5.8. Space $V^d$ and its base given by irreducible components .....	52
5.9. A pairing on $V^d$ .....	55
5.10. Another base of $V^d$ .....	56
5.11. Computation of the pairing .....	59
5.12. Relation between $V^d$ and $U^d$ .....	60
5.13. Compatibility .....	61
5.14. $\text{Aut}(G)$ invariance .....	63
<b>6. <math>\mathcal{W}</math>-algebra representation on localized equivariant cohomology .....</b>	<b>65</b>
6.1. Freeness .....	66
6.2. Another base of $U^d$ , continued .....	66
6.3. Heisenberg algebra associated with the Cartan subalgebra .....	67
6.4. Virasoro algebra .....	69
6.5. The first Chern class of the tautological bundle .....	71
6.6. $\mathcal{W}$ -algebra representation .....	72
6.7. Highest weight .....	73
6.8. Kac-Shapovalov form .....	75
<b>7. <math>R</math>-matrix .....</b>	<b>79</b>
7.1. Definition .....	79
7.2. Factorization .....	80
7.3. Intertwiner property .....	80
7.4. Yang-Baxter equation .....	81
7.5. $SL(2)$ -case .....	81
7.6. $\mathbb{G}$ -equivariant cohomology .....	82

7.7. A different proof of the Heisenberg commutation relation .....	83
<b>8. Whittaker state</b> .....	85
8.1. Universal Verma/Wakimoto modules .....	85
8.2. $\mathbb{G}$ -equivariant cohomology .....	87
8.3. Whittaker condition .....	87
8.4. Whittaker vector and Kac-Shapovalov form .....	88
8.5. Lattices .....	89
8.6. Pairing at $\varepsilon_1, \varepsilon_2 = 0$ .....	91
8.7. Proof, a geometric part .....	92
8.8. Proof, a representation theoretic part .....	93
8.9. Type $A$ .....	95
<b>A. Appendix: exactness of hyperbolic restriction</b> .....	97
A.1. Zastava spaces .....	97
A.2. Plan of the proof .....	98
A.3. Attractors and repellents on the Uhlenbeck space: maximal torus case .....	98
A.4. The map $f_d$ .....	99
A.5. The central fiber .....	99
A.6. Good coweights .....	99
A.7. Exactness of twisted hyperbolic restriction .....	100
A.8. Exactness of $\Phi_{T,G}$ .....	101
A.9. Exactness of $\Phi_{L,G}$ .....	102
<b>B. Integral form of the <math>\mathcal{W}</math>-algebra</b> .....	105
B.1. Integral form of the BRST complex .....	105
B.2. Generators $\widetilde{W}_n^{(\kappa)}$ .....	108
B.3. Grading vs filtration .....	109
B.4. Specialization at $\varepsilon_1 = 0$ .....	110
B.5. The opposite spectral sequence .....	112
B.6. Kernel of the screening operator .....	117
B.7. The embedding $\mathcal{W}_{\mathbf{A}}(\mathfrak{g}) \rightarrow \mathcal{W}_{\mathbf{A}}(\mathfrak{l})$ .....	118
<b>Bibliography</b> .....	121
<b>List of notations</b> .....	127
