

CONTENTS

0. Introduction	1
Overview	1
The Yang-Mills measure	2
Large N limits	5
The master field	6
Brownian motions	7
The Makeenko-Migdal equations	9
The original derivation of the Makeenko-Migdal equations	11
Structure of the paper	14
Acknowledgements	15
Part I. Large N limit of Brownian motions	17
1. Brownian motions on classical groups	19
1.1. Classical groups	19
1.2. Invariant scalar products	20
1.3. Brownian motions	23
1.4. Expected values of polynomials of the entries	25
2. Unidimensional convergence	27
2.1. Moments of the empirical spectral measure	27
2.2. Convergence of empirical spectral measures	28
2.3. Characterisation of the moments of the limiting distribution	29
2.4. The positive unitary case revisited	31
2.5. The Brauer algebra I	33
2.6. The positive orthogonal case	35
2.7. The Brauer algebra II	38
2.8. The positive symplectic case	43
2.9. Positive and negative powers	44
2.10. Itô's equation for mixed tensor moments	46
2.11. The Brauer algebra III	48
2.12. Convergence of moments with mixed signs	51
2.13. Uniform matrices	54

3. Asymptotic freeness and convergence of Brownian motions	57
3.1. The free unitary Brownian motion	58
3.2. Strong asymptotic freeness and convergence of Brownian motions ...	58
3.3. The unitary case	60
3.4. The Brauer algebra IV	65
3.5. The orthogonal case	68
3.6. The symplectic case	70
4. Speed of convergence of Brownian motions	77
4.1. Speed of convergence	77
4.2. Itô's equation for words	81
4.3. The unitary case	82
4.4. The orthogonal case	85
4.5. The symplectic case	87
Part II. The master field on the plane	89
5. The Yang-Mills measure on the plane	91
5.1. Discrete Yang-Mills field	91
5.2. Continuous Yang-Mills field	94
5.3. The group of loops in a graph	96
6. The master field on the plane	103
6.1. Large N limit of the Yang-Mills field on a graph	103
6.2. Large N limit for piecewise affine loops	105
6.3. Uniformity of the convergence towards the master field (statement) .	108
6.4. Maximal Amperean area	109
6.5. Uniformity of the convergence towards the master field (proof)	113
6.6. The distribution of the master field	114
6.7. The group of rectifiable loops	117
6.8. The master field as a non-commutative stochastic process	123
7. Differentiation with respect to the area	127
7.1. Differential operators on the configuration space	127
7.2. Variation of the area in the abstract	133
7.3. Area derivatives of spin networks	137
7.4. Analyticity of the expectations of spin networks	141
8. Computation of the expectation of Wilson loops	147
8.1. Outline of the strategy	147
8.2. Examples	148
8.3. Wilson skeins	152
8.4. Wilson garlands	156
8.5. A differential system for the expectation of Wilson loops	160

9. The Makeenko-Migdal equations	163
9.1. Extended gauge invariance and the abstract Makeenko-Migdal equations	164
9.2. The Makeenko-Migdal equations for the Yang-Mills field	169
9.3. The Makeenko-Migdal equations for the master field	171
9.4. The recursive computation of the master field	173
9.5. The Kazakov basis	179
Table of the master field	187
Bibliography	193
Index	199
