

CONTENTS

1. Introduction	1
2. Resolution model categories	9
2.1. Cosimplicial objects	9
2.2. Cosimplicial resolutions	14
2.3. \mathcal{G} -cofree and quasi- \mathcal{G} -cofree maps	16
3. Natural homotopy groups	21
3.1. Basic properties of the natural homotopy groups	21
3.2. Algebraic structures on homotopy groups	24
3.3. The spiral exact sequence	27
3.4. Cosimplicial connectivity	28
4. Cosimplicial unstable coalgebras	33
4.1. Preliminaries	33
4.2. Homology and \mathbb{F} -GEMs	36
4.3. Cosimplicial resolutions of unstable coalgebras	38
4.4. Cosimplicial comodules over a cosimplicial coalgebra	39
4.5. Spectral sequences	43
4.6. Homotopy excision	47
5. André-Quillen cohomology	51
5.1. Coabelian objects	51
5.2. André-Quillen cohomology	53
5.3. Objects of type $K_C(M, n)$	54
5.4. Postnikov decompositions	59
5.5. An extension of Proposition 5.4.1	61
6. Cosimplicial spaces	67
6.1. Cosimplicial resolutions of spaces	68
6.2. Consequences of the Künneth theorem	71
6.3. Objects of type $L_C(M, n)$	75
6.4. Postnikov decompositions	82

7. Moduli spaces of topological realizations	87
7.1. Potential n -stages	88
7.2. The main results	91
7.3. Moduli spaces of marked topological realizations	98
7.4. Obstruction theories	101
A. The spiral exact sequence	105
A.1. Constructing the exact sequence	105
A.2. The spiral exact sequence and π_0 -modules	110
A.3. The spiral spectral sequence	123
B. \mathcal{H}_{un}-algebras and unstable algebras	125
B.1. The cohomology of Eilenberg-MacLane spaces	125
B.2. Algebraic theories	126
B.3. Unstable algebras are \mathcal{H}_{un} -algebras	127
B.4. Unstable algebras, rationally	131
B.5. The cohomology spectral sequence	132
C. Moduli spaces in homotopy theory	135
C.1. Simplicial localization	135
C.2. Models for mapping spaces	136
C.3. Moduli spaces	138
C.4. A moduli space associated with a directed diagram	141
Bibliography	145
