

CONTENTS

Introduction	1
1. From 3-manifolds to groups	1
2. Definition of JSJ decompositions	3
3. Existence	5
4. Uniqueness	5
JSJ trees are not unique.	5
. . . but sometimes there is a canonical JSJ tree	6
5. Description: Quadratically hanging vertex groups	7
6. Relative decompositions	9
7. Acylindricity	9
8. Compatibility JSJ	11
9. Contents of the book	13
10. What is new	16
PART I. Preliminaries	19
1.1. Basic notions and notations	19
1.2. Trees	20
1.3. $(\mathcal{A}, \mathcal{H})$ -trees, one-endedness	22
1.4. Maps between trees, compatibility, deformation spaces	23
1.5. Slenderness, smallness	24
1.6. Accessibility	26
1.7. Relative finite generation and presentation	26
PART II. The JSJ deformation space	29
2. Definition and existence	29
2.1. Standard refinements	29
2.2. Universal ellipticity	32
2.3. The JSJ deformation space	33
2.4. Existence of the JSJ deformation space: the non-relative case	34

2.5. Existence: the relative case	35
2.6. Relation with other constructions	38
3. Examples of JSJ decompositions	39
3.1. Free groups	39
3.2. Free splittings: the Grushko deformation space	39
3.3. Splittings over finite groups: the Stallings-Dunwoody deformation space	40
3.4. Splittings of small groups	40
3.5. Generalized Baumslag-Solitar groups	41
3.6. Locally finite trees	41
3.7. RAAGs	42
3.8. Parabolic splittings	42
3.9. Non-rigid examples	43
4. A few useful facts	44
4.1. Changing edge groups	44
4.2. Incidence structures of vertex groups	46
4.3. JSJ decompositions of vertex groups	48
4.4. Relative JSJ decompositions through fillings	50
PART III. Flexible vertices	53
5. Quadratically hanging vertices	54
5.1. 2-orbifolds and their splittings	54
5.2. Definition and properties of quadratically hanging subgroups	61
5.3. Quadratically hanging subgroups are elliptic in the JSJ	65
5.4. Peripheral structure of quadratically hanging vertices	68
5.5. Flexible vertices of abelian JSJ decompositions	70
6. JSJ decompositions over slender groups	71
6.1. Statement of results	71
6.2. Reduction to totally flexible groups	74
6.3. Fujiwara-Papasoglu's core	76
6.4. The regular neighborhood	80
6.5. Constructing a filling pair of splittings	84
6.6. Flexible groups are QH when trees are minuscule	88
6.7. All splittings of a totally flexible group are minuscule	89
6.8. Slenderness in trees	91
6.9. Slender flexible groups	92
PART IV. Acylindricity	95
7. Trees of cylinders	96
7.1. Definition	96
7.2. Acylindricity	100
7.3. Small domination	101
7.4. Compatibility	103
8. Constructing JSJ decompositions using acylindricity	104
8.1. Uniform acylindricity	105

8.2. Acylindricity up to small groups	112
9. Applications	116
9.1. CSA groups	117
9.2. Γ -limit groups and K -CSA groups	118
9.3. Relatively hyperbolic groups	121
9.4. Virtually cyclic splittings	124
9.5. The \mathcal{X}_{\max} -JSJ decomposition	125
PART V. Compatibility	131
10. The compatibility JSJ tree	131
10.1. Existence of the compatibility JSJ space	132
10.2. The compatibility JSJ tree T_{co}	135
11. Examples	136
11.1. Free groups	136
11.2. Algebraic rigidity	137
11.3. Free products	137
11.4. (Generalized) Baumslag-Solitar groups	137
11.5. The canonical decomposition of Scott and Swarup	138
11.6. Poincaré duality groups	138
11.7. Trees of cylinders	139
Appendix A. \mathbb{R}-trees, length functions, and compatibility	143
A.1. Metric trees and length functions	143
A.2. From length functions to trees	145
A.3. Compatibility and length functions	148
A.4. Common refinements	151
A.5. Arithmetic of trees	152
A.6. Reading actions on \mathbb{R} -trees	154
Bibliography	157
Index	163
