

## CONTENTS

<b>1. Introduction</b> .....	1
1.1. Overview .....	1
1.2. The “categorical” conjecture .....	2
1.3. Tilting modules and the antispherical module .....	4
1.4. Tilting characters .....	6
1.5. The case of the group $GL_n(\mathbb{k})$ .....	8
1.6. The diagrammatic Hecke category and parity sheaves .....	9
1.7. Variants .....	10
1.8. Simple characters .....	11
1.9. Comparison with Lusztig’s conjecture .....	15
1.10. Acknowledgements .....	16
1.11. Organization of the book .....	17
<b>Part I. General conjecture</b> .....	19
<b>2. Tilting objects and sections of the <math>\nabla</math>-flag</b> .....	21
2.1. Highest weight categories .....	21
2.2. Canonical $\nabla$ -flags .....	22
2.3. Tilting objects and sections of the $\nabla$ -flag .....	23
<b>3. Regular and subregular blocks of reductive groups</b> .....	27
3.1. Definitions .....	27
3.2. Translation functors .....	29
3.3. Sections of the $\nabla$ -flag and translation to a wall .....	30
3.4. Sections of the $\nabla$ -flag and translation from a wall .....	33
3.5. Morphisms between “Bott-Samelson type” tilting modules .....	36
<b>4. Diagrammatic Hecke category and the antispherical module</b> .....	39
4.1. The affine Hecke algebra and the antispherical module .....	39
4.2. Diagrammatic Soergel bimodules .....	41
4.3. Two lemmas on $\mathcal{D}_{BS}$ .....	45
4.4. Categorized antispherical module .....	46
4.5. Morphisms in the categorized antispherical module .....	47
<b>5. Main conjecture and consequences</b> .....	53

5.1. Statement of the conjecture .....	53
5.2. Tilting modules and antispherical Soergel bimodules .....	55
5.3. Surjectivity .....	56
5.4. Dimensions of morphism spaces .....	59
5.5. Proof of Theorem 5.2.1 .....	60
5.6. Graded form of $\text{Rep}_0(G)$ .....	61
5.7. Integral form of $\text{Tilt}(\text{Rep}_0(G))$ .....	64
5.8. Integral form of $\text{Rep}_0(G)$ .....	66
<b>Part II. The case of <math>\text{GL}_n(\mathbb{k})</math> .....</b>	<b>73</b>
<b>6. Representations of <math>\text{GL}_n</math> in characteristic <math>p</math> as a 2-representation of <math>\widehat{\mathfrak{gl}}_p</math> .....</b>	<b>77</b>
6.1. The affine Lie algebra $\widehat{\mathfrak{gl}}_N$ .....	77
6.2. The natural representation of $\widehat{\mathfrak{gl}}_N$ .....	78
6.3. Realization of $\bigwedge^n \text{nat}_p$ as a Grothendieck group .....	79
6.4. $\text{Rep}(G)$ as a 2-representation .....	84
<b>7. Restriction of the representation to <math>\widehat{\mathfrak{gl}}_n</math> .....</b>	<b>93</b>
7.1. Combinatorics .....	93
7.2. Categorifying the combinatorics .....	94
7.3. First relations .....	95
7.4. Restriction of the 2-representation to $\mathcal{U}(\widehat{\mathfrak{gl}}_n)$ .....	100
<b>8. From categorical <math>\widehat{\mathfrak{gl}}_n</math>-actions to <math>\mathcal{D}_{\text{BS}}</math>-modules .....</b>	<b>103</b>
8.1. Strategy .....	103
8.2. Preliminary lemmas .....	105
8.3. Polynomials .....	107
8.4. One color relations .....	108
8.5. Cyclicity .....	109
8.6. Jones-Wenzl relations .....	110
8.7. Two color associativity .....	112
8.8. Zamolodchikov (three color) relations .....	117
<b>Part III. Relation to parity sheaves .....</b>	<b>125</b>
<b>9. Parity complexes on flag varieties .....</b>	<b>127</b>
9.1. Reminder on Kac-Moody groups and their flag varieties .....	127
9.2. Partial flag varieties .....	130
9.3. Derived categories of sheaves on $\mathcal{X}$ and $\mathcal{X}^s$ .....	132
9.4. Parity complexes on flag varieties .....	133
9.5. Sections of the !-flag .....	136
9.6. Sections of the !-flag and pushforward to $\mathcal{X}^s$ .....	137
9.7. Sections of the !-flag and pullback from $\mathcal{X}^s$ .....	140
9.8. Morphisms between “Bott-Samelson type” parity complexes .....	142

<b>10. Parity complexes and the Hecke category</b> .....	145
10.1. Diagrammatic category associated with $\mathcal{G}$ .....	145
10.2. More on Bott-Samelson parity complexes .....	146
10.3. Statement of the equivalences .....	147
10.4. Construction of the functor $\Delta_{\text{BS}}$ .....	148
10.5. Verification of the relations .....	152
10.6. Fully-faithfulness of $\Delta_{\text{BS}}$ .....	154
10.7. The case of the affine flag variety .....	158
<b>11. Whittaker sheaves and antispherical diagrammatic categories</b> .....	161
11.1. Definition of Whittaker sheaves .....	161
11.2. Whittaker parity complexes .....	163
11.3. Sections of the $!$ -flag for Whittaker parity complexes .....	165
11.4. Surjectivity .....	167
11.5. Description of the antispherical diagrammatic category in terms of Whittaker sheaves .....	168
11.6. Application to the light leaves basis in the antispherical category ..	169
11.7. Iwahori-Whittaker sheaves on the affine flag variety .....	170
<b>List of notation</b> .....	173
<b>Bibliography</b> .....	179
