

CONTENTS

Introduction	1
1. Background	1
2. The goal	2
3. An overview of Part I	3
4. An overview of Part II	5
5. Some future works	7
6. Organization	8
Part I. Quantum symmetric pairs	13
1. Preliminaries on quantum groups	15
1. The involution θ and the lattice Λ_θ	15
2. The algebras $'\mathfrak{f}$, \mathfrak{f} and \mathbf{U}	16
3. Braid group action and canonical basis	18
4. Quasi- \mathcal{R} -matrix Θ	20
2. Intertwiner for a quantum symmetric pair	23
1. Definition of the algebra \mathbf{U}^t	23
2. Quantum symmetric pair $(\mathbf{U}, \mathbf{U}^t)$	24
3. The intertwiner Υ	27
4. Constructing Υ	29
5. The isomorphism \mathcal{T}	35
3. Quasi-\mathcal{R}-matrix for a quantum symmetric pair	37
1. Definition of Θ^t	37
2. Normalizing Θ^t	38
3. Properties of Θ^t	42
4. The bar map on \mathbf{U}^t -modules	44
4. The integrality of Υ and the ι-canonical basis of ${}^\omega L(\lambda)$	47
1. The homomorphism $\pi_{\lambda, \mu}$	47
2. The ι -canonical bases at rank one	50
3. Integrality at rank one	54
4. The integrality of Υ	56
5. The ι -canonical basis of a based \mathbf{U} -module	58

5. The $(\mathbf{U}^l, \mathcal{H}_{B_m})$-duality and compatible bar involutions	61
1. Schur-Jimbo duality	61
2. The $(\mathbf{U}^l, \mathcal{H}_{B_m})$ -duality	63
3. Bar involutions and duality	65
6. The quantum symmetric pair $(\mathbf{U}, \mathbf{U}^J)$	69
1. The coideal subalgebra \mathbf{U}^J	69
2. The intertwiner Υ and the isomorphism \mathcal{T}	71
3. Quasi- \mathcal{R} matrix on \mathbf{U}^J	72
4. The J -involutive modules	73
5. Integrality of Υ	74
6. The J -canonical basis of ${}^\omega L(\lambda)$	75
7. The $(\mathbf{U}^J, \mathcal{H}_{B_m})$ -duality	76
Part II. Representation theory	79
7. BGG categories for ortho-symplectic Lie superalgebras	81
1. The Lie superalgebra $\mathfrak{osp}(2m+1 2n)$	81
2. Infinite-rank Lie superalgebras	84
3. The BGG categories	86
4. Truncation functors	89
8. Fock spaces and Bruhat orderings	91
1. Infinite-rank constructions	91
2. The Fock space \mathbb{T}^b	92
3. The q -wedge spaces	94
4. Bruhat orderings	96
9. ι-Canonical bases and Kazhdan-Lusztig-type polynomials	101
1. The B -completion and Υ	101
2. ι -Canonical bases	103
3. Bar involution and q -wedges of \mathbb{W}	105
4. Truncations	108
5. Bar involution and q -wedges of \mathbb{V}	110
10. Comparisons of ι-canonical bases in different Fock spaces	111
1. Tensor versus q -wedges	111
2. Adjacent ι -canonical bases	112
3. Combinatorial super duality	114
11. Kazhdan-Lusztig theory of type B and ι-canonical basis	117
1. Grothendieck groups and Fock spaces	117
2. Comparison of characters	119
3. Translation functors	120

4. Classical KL theory reformulated	122
5. Super duality and Fock spaces	123
6. ι -KL theory for \mathfrak{osp}	124
12. BGG category of $\mathfrak{osp}(2m+1 2n)$-modules of half-integer weights ..	127
1. Setups for half-integer weights	127
2. Fock spaces and J -canonical bases	128
3. KL theory and J -canonical basis	129
Bibliography	131
