

CONTENTS

1. Introduction	1
2. Functional analytic prerequisites	13
2.1. Sobolev spaces	13
2.2. Smoothing operators and interpolation	17
2.3. Tame estimates	20
3. Setup and preliminary estimates	29
3.1. Normal form of the dNLS equation	29
3.2. Hamiltonian setup	33
3.3. Tame estimates for the Hamiltonian vector fields $X_{H^{\text{nl}s}} \circ \check{\iota}$ and $X_P \circ \check{\iota}$	38
4. Nash-Moser theorem	45
5. Approximate right inverse	49
5.1. Formula for ζ	49
5.2. Isotropic torus embeddings	50
5.3. Canonical coordinates near an isotropic torus	52
5.4. Approximate right inverse of the differential of F_ω	54
6. Reduction of \mathcal{L}_ω. Part 1	65
6.1. Preliminary analysis of the operators \mathfrak{A} and \mathfrak{R}^ε	66
6.2. First transformation	79
6.3. Second transformation	85
6.4. Gauge transformation	91
7. Reduction of \mathcal{L}_ω. Part 2	95
7.1. KAM reduction scheme for \mathbf{L}_0	95
7.2. 2×2 block representation of operators	97
7.3. Homological equation	100
7.4. Proof of Theorem 7.1	104
7.5. 2×2 block diagonalization of \mathbf{L}_0	107
7.6. Proof of Theorem 5.10	113
7.7. Variation with respect to ι	116
8. Nash-Moser iteration	125

9. Measure estimate	135
Bibliography	145
