

CONTENTS

1. Introduction	1
1.1. Fundamental structures and conjectures	1
1.2. Baxter subalgebras and quantum multiplication	3
1.3. Quantum multiplication by divisors	7
1.4. Shift operators and qKZ	9
1.5. Yangian of $\widehat{\mathfrak{gl}(1)}$ and instanton moduli	11
1.6. Further directions	13
1.7. Update	15
1.8. Acknowledgments	15
Part I. General Theory	17
2. Nakajima varieties	19
2.1. Definition	19
2.2. Basic properties	21
2.3. Torus-fixed points	25
2.4. Tensor product of Nakajima varieties	27
2.5. Slices	28
2.6. Minuscule coweights	32
3. Stable envelopes	35
3.1. Assumptions and conventions	35
3.2. Basic constructions	37
3.3. Characterization of stable envelopes	42
3.4. Lagrangian residues	45
3.5. Proof of existence	46
3.6. Torus restriction	48
3.7. Symplectic resolutions	49
4. Properties of R-matrices	53
4.1. Definition and braid relations	53
4.2. Changing the torus	56
4.3. Covers and factorization of R -matrices	58
4.4. Adjoint operators	60
4.5. Unitarity	61

4.6. Action of Steinberg correspondences	62
4.7. Vacuum matrix elements	63
4.8. Classical R -matrices	65
4.9. Diagonal matrix elements of R -matrices	69
4.10. Flops and stable envelopes	71
5. Yangians	77
5.1. Tensor products	77
5.2. Construction of Yangians	78
5.3. The Lie algebra \mathfrak{g}_Q	83
5.4. Operators of classical multiplication	87
5.5. The structure of the Yangian	89
6. Further properties of the Yangian	93
6.1. The core Yangian	93
6.2. Slices and intertwiners	98
6.3. The dual Yangian	101
6.4. Intertwiners and relations	103
6.5. Baxter subalgebras and Casimir connection	104
7. Quantum multiplication	107
7.1. Preliminaries	107
7.2. Modified reduced operators	107
7.3. Broken curves	109
7.4. Proof of Theorem 7.2.1	110
7.5. Additivity	112
8. Shift operators	113
8.1. Definition	113
8.2. Intertwining property	115
8.3. Shift operators are quantum operators	117
9. Minuscule shifts and R-matrices	119
9.1. Setup	119
9.2. Properness	121
9.3. Computation of $S(\sigma)$	122
10. Quantum multiplication by divisors	125
10.1. Classical multiplication by divisors	125
10.2. Quantum operators	126
11. Cotangent bundles of Grassmannians	129
11.1. Quantum cohomology	129
11.2. The stable basis	133
11.3. Yangian action	135

Part II. Instanton moduli	139
12. Classical \mathfrak{r}-matrix and $\widehat{\mathfrak{gl}(1)}$.	141
12.1. Setup	141
12.2. Baranovsky operators	143
12.3. Proof of Theorem 12.2.1	145
12.4. Classical \mathfrak{r} -matrix	148
13. Free bosons	153
13.1. Fock spaces	153
13.2. Insertions and coproducts	156
13.3. Virasoro algebra	157
13.4. Reflection operator	159
14. The full R-matrix	161
14.1. Zero modes	161
14.2. Cup product by divisor	161
14.3. R -matrix as a Virasoro intertwiner	164
14.4. The $1/u$ expansion of \mathbf{R}	166
15. Quantum multiplication for $\mathcal{M}(r, n)$	169
15.1. Explicit formulas	169
15.2. Generation statement	170
16. Gamma functions	173
16.1. The bundle $\widehat{\mathcal{V}}$	173
16.2. Barnes' Γ -function	174
16.3. The matrix $\widehat{\mathbf{R}}$	175
17. Core Yangian modulo \hbar	177
17.1. Semiclassical R -matrix	177
17.2. Stable basis for Hilb_n	177
17.3. Differential operators on \mathbb{C}^\times and $\mathfrak{gl}(\infty)$	179
17.4. Plücker relations	181
18. The Yangian of $\widehat{\mathfrak{gl}(1)}$	185
18.1. Generators of the core Yangian	185
18.2. Slices and screening operators	189
19. Yangian and vertex algebras	193
19.1. The operator $\widehat{\mathbf{Q}}_{\text{cl}}$	193
19.2. Yangian and \mathcal{W} -algebras	194
Bibliography	201
