

# CONTENTS

<b>1. Introduction</b> .....	1
<b>2. PMCTs, foliations of compact types and orbifolds</b> .....	7
2.1. The monodromy and holonomy groupoids .....	8
2.2. Foliation versus étale groupoids .....	10
2.3. Morita equivalence .....	11
2.4. Foliations of $\mathcal{C}$ -types .....	14
2.5. Normal forms .....	15
2.6. Orbifolds .....	18
<b>3. Integral affine structure</b> .....	23
3.1. Integral affine structures on manifolds .....	23
3.2. Integral affine structures on orbifolds and foliations .....	29
3.3. From PMCTs to integral affine structures .....	33
3.4. The extended monodromy groups .....	35
3.5. Examples .....	42
<b>4. The linear variation Theorem I: 1-connected leaves</b> .....	47
4.1. The classical Duistermaat-Heckman Theorem .....	47
4.2. The developing map for integral affine structures .....	49
4.3. The linear variation .....	51
4.4. The linear variation theorem .....	56
4.5. The twisted Dirac case .....	60
4.6. Two examples from Lie theory .....	63
<b>5. The linear variation Theorem II: the general case</b> .....	67
5.1. The developing map for transverse integral affine foliations .....	67
5.2. The linear variation theorem .....	68
5.3. Examples .....	73
<b>6. Measures and the Duistermaat-Heckman formula</b> .....	77
6.1. Measures on leaf spaces .....	77
6.2. A Weyl type integration formula .....	81
6.3. The Duistermaat-Heckman measure .....	83
<b>7. Proper isotropic realizations</b> .....	89
7.1. Symplectic realizations and Hamiltonian $\mathcal{G}$ -spaces .....	89
7.2. The holonomy groupoid relative to an isotropic realization .....	93

7.3. Isotropic realizations and Morita equivalence .....	99
7.4. Isotropic realizations and $\mathcal{E}$ -integrations .....	101
7.5. The Dazord-Delzant class .....	103
<b>8. Symplectic gerbes over manifolds .....</b>	<b>107</b>
8.1. Symplectic torsors .....	108
8.2. Gerbes and their Dixmier-Douady class .....	112
8.3. Symplectic gerbes and their Lagrangian class .....	117
8.4. Lagrangian Dixmier-Douady class vs Dazord-Delzant class .....	120
<b>9. Symplectic gerbes over orbifolds .....</b>	<b>123</b>
9.1. Symplectic torsors over integral affine orbifolds .....	124
9.2. Symplectic gerbes over integral affine orbifolds .....	127
9.3. The twisted Dirac setting .....	135
<b>A. Symplectic groupoids and moment maps .....</b>	<b>139</b>
A.1. Hamiltonian $\mathcal{G}$ -spaces .....	139
A.2. Symplectic quotients of Hamiltonian $\mathcal{G}$ -spaces .....	140
A.3. Symplectic Morita equivalence .....	141
A.4. Hamiltonian $\mathcal{T}_\Lambda$ -spaces .....	142
A.5. The twisted Dirac case .....	143
<b>B. Proper transverse integral affine foliations .....</b>	<b>145</b>
B.1. Transverse integral affine structures and the foliation holonomy ....	145
B.2. Lifting to the linear holonomy cover .....	147
B.3. Proper Foliations: a Molino type Theorem .....	149
<b>Bibliography .....</b>	<b>151</b>
