

# CONTENTS

<b>Part I. Introductory material, results</b> .....	1
<b>1. Equations and questions</b> .....	3
1.1. Introduction .....	3
1.2. Equations .....	4
1.3. Metrics with convergent asymptotics .....	10
1.4. Questions .....	18
1.5. Outline of the introductory part .....	20
1.6. Acknowledgements .....	24
<b>2. On the notion of balance</b> .....	25
2.1. Introduction .....	25
2.2. Unbalanced equations, first examples of super exponential growth ..	27
2.3. Gevrey classes .....	30
2.4. Unbalanced equations, generic super exponential growth .....	31
2.5. A rough idea of the argument in a model case .....	33
<b>3. A geometric perspective</b> .....	37
3.1. Introduction .....	37
3.2. Conditions on the metric .....	37
3.3. The lower order terms .....	39
3.4. A rough notion of balance .....	40
3.5. Geometric formulation of the results in the unbalanced setting .....	41
<b>4. Silent equations</b> .....	45
4.1. Introduction .....	45
4.2. Results .....	47
4.3. Examples .....	51
4.4. Strengths and weaknesses of the results; a rough idea of the argument	53
<b>5. Transparent equations</b> .....	57
5.1. Introduction .....	57
5.2. The limit equation .....	62
5.3. Future asymptotics .....	65
5.4. Specifying the asymptotics .....	67
5.5. An example: the flat Kasner solution .....	69
5.6. Outline of the argument .....	70

<b>6. Equations with a dominant noisy spatial direction</b> .....	73
6.1. Introduction .....	73
6.2. Results .....	80
6.3. Outline of the proof .....	91
<b>7. Energy estimates in the asymptotically diagonal setting</b> .....	95
7.1. Introduction .....	95
7.2. Asymptotically diagonal equations .....	100
7.3. The constituent growth/decay rates .....	102
7.4. Energy estimates .....	105
7.5. Outline of the argument, outlook .....	108
<b>8. Improved asymptotic estimates in the silent setting</b> .....	113
8.1. Estimating the asymptotic data in terms of the initial data .....	113
8.2. Estimating the initial data in terms of the asymptotic data .....	115
8.3. Outline of the argument, outlook .....	117
<b>Part II. Rough analysis in the silent and in the transparent settings</b> .....	119
<b>9. ODE's with exponentially decaying error terms</b> .....	121
9.1. Equations and algebraic decompositions .....	123
9.2. Rough estimate of solutions .....	126
9.3. Detailed asymptotics .....	128
9.4. Specifying data at infinity .....	132
<b>10. Asymptotics for weakly silent, balanced and convergent equations</b> .....	137
10.1. Introduction .....	137
10.2. Weak silence, balance and convergence .....	139
10.3. The oscillatory regime .....	140
10.4. The basic energy estimate .....	142
10.5. Future asymptotics .....	145
10.6. Specifying the asymptotics .....	151
<b>11. ODE analysis in the transparent setting</b> .....	155
11.1. Introduction .....	155
11.2. Asymptotic eigenvalue calculation .....	157
11.3. Computing projections onto generalized eigenspaces .....	161
11.4. Mode by mode analysis .....	173
11.5. Specifying data at infinity .....	181
11.6. Algebraic properties of $A(\iota)$ .....	185
<b>12. Asymptotics for weakly transparent, balanced and convergent equations</b> ..	189
12.1. Introduction .....	189
12.2. Weak transparency, balance and convergence .....	191
12.3. Deriving asymptotics .....	198
12.4. Specifying the asymptotics .....	216

<b>Part III. Averaging over oscillations</b> .....	223
<b>13. Introduction and technical preliminaries</b> .....	225
13.1. Introduction .....	225
13.2. On a class of matrix exponentials .....	228
13.3. Approximating a fundamental solution by a matrix exponential ...	234
13.4. Inhomogeneous equations .....	236
<b>14. One period of the oscillations; terminology and preliminary estimates</b> .....	237
14.1. Assumptions .....	237
14.2. Change of variables .....	238
14.3. Choosing appropriate time intervals .....	241
14.4. Variation of the coefficients during one period .....	244
14.5. Computing the approximate fundamental solution .....	247
<b>15. One period of the oscillations; reformulation and detailed estimates</b> .....	249
15.1. Rough estimate of the evolution during one period .....	249
15.2. First detailed estimate of the evolution over one period .....	253
15.3. Iteration .....	256
<b>Part IV. Unbalanced equations</b> .....	263
<b>16. Unbalanced equations</b> .....	265
16.1. Introduction .....	265
16.2. Unbalanced equations, the ODE setting .....	269
16.3. Unbalanced equations, the PDE setting .....	272
16.4. Subdividing the time interval .....	274
16.5. Basic properties of the iteration .....	276
16.6. The main estimate .....	280
16.7. Lower bounds on the growth of the energy .....	288
16.8. Super exponential growth of solutions .....	291
16.9. Standard energy estimates .....	298
16.10. Gevrey classes .....	300
16.11. Mode analysis .....	305
<b>Part V. Equations with a dominant noisy spatial direction</b> .....	309
<b>17. Terminology and basic estimates</b> .....	311
17.1. Introduction .....	311
17.2. Terminology and basic assumptions .....	312
17.3. Oscillation adaptedness and definition of the late time regime .....	315
17.4. Detailed asymptotics of the matrices appearing in the iteration ...	316
17.5. Reformulating the iteration .....	320
17.6. A rough mode estimate .....	321
17.7. A rough Sobolev estimate .....	324
<b>18. Asymptotics for one mode and late times</b> .....	327
18.1. Asymptotics along a time sequence .....	327

18.2. Specifying data at infinity .....	334
18.3. Controlling the solution beyond the time sequence .....	338
<b>19. Asymptotics for all future times .....</b>	<b>345</b>
19.1. Introduction .....	345
19.2. The case of scalar homogeneous wave equations .....	346
19.3. A uniqueness result .....	353
19.4. Detailed asymptotics in the noisy setting .....	356
19.5. Specifying data at infinity .....	368
<b>Part VI. Non-degenerate, diagonally dominated, convergent and balanced equations .....</b>	<b>377</b>
<b>20. Equations with diagonally dominated, convergent and balanced coefficients .....</b>	<b>379</b>
20.1. Introduction .....	379
20.2. Equations with diagonally dominant, convergent and balanced coefficients .....	382
20.3. Simplifying the matrix coefficients .....	385
20.4. Choosing appropriate time intervals; defining the frequency eras ...	388
20.5. Estimating sums in a frequency era .....	391
<b>21. Non-degenerate, diagonally dominated, convergent and balanced equations .....</b>	<b>395</b>
21.1. Introduction .....	395
21.2. Mode analysis in one frequency era .....	396
21.3. Refined estimates in transparent eras .....	404
21.4. Analysis for one mode .....	408
21.5. The case of unbounded frequency eras .....	418
21.6. Optimality .....	421
<b>22. Estimating the Sobolev norms of solutions .....</b>	<b>429</b>
22.1. Introduction .....	429
22.2. Mode estimates for the entire future .....	429
22.3. Energy estimates .....	438
22.4. Optimality .....	439
<b>23. The silent setting .....</b>	<b>443</b>
23.1. Introduction .....	443
23.2. Future asymptotics, silent setting .....	444
23.3. Specifying the asymptotics .....	454
<b>Part VII. Appendices .....</b>	<b>459</b>
<b>24. Spectral aspects of differential operators and matrices .....</b>	<b>461</b>
24.1. Dividing the solution into modes .....	461
24.2. The Jordan normal form .....	465

<b>25. Geometric preliminaries</b> .....	467
25.1. Metrics of interest, lapse and shift decomposition .....	467
25.2. The components of the inverse .....	469
25.3. The second fundamental form .....	470
25.4. Geometric convergence .....	472
25.5. Norms .....	473
25.6. Quantitative bounds on the shift vector field .....	475
25.7. From geometric to analytical conditions, part I .....	476
25.8. Implications concerning the causal structure .....	483
<b>26. Relating the analytic and geometric conditions</b> .....	485
26.1. Bounds on the coefficients in the silent setting .....	485
26.2. Conditions ensuring weak transparency .....	486
26.3. Conditions ensuring the existence of a dominant noisy spatial direction .....	489
26.4. The asymptotically diagonal setting .....	494
<b>Index</b> .....	499
<b>Bibliography</b> .....	507
