

CONTENTS

1. Introduction	1
1.1. Norm functors	1
1.2. Normed motivic spectra	4
1.3. Examples of normed spectra	5
1.4. Norms in other contexts	7
1.5. Norms vs. framed transfers	9
1.6. Summary of the construction	10
1.7. Summary of results	11
1.8. Guide for the reader	13
1.9. Remarks on ∞ -categories	13
1.10. Standing assumptions	14
1.11. Acknowledgments	14
2. Preliminaries	15
2.1. Nonabelian derived ∞ -categories	15
2.2. Unstable motivic homotopy theory	18
2.3. Weil restriction	20
3. Norms of pointed motivic spaces	21
3.1. The unstable norm functors	22
3.2. Norms of quotients	25
4. Norms of motivic spectra	29
4.1. Stable motivic homotopy theory	29
4.2. The stable norm functors	31
5. Properties of norms	33
5.1. Composition and base change	33
5.2. The distributivity laws	35
5.3. The purity equivalence	38
5.4. The ambidexterity equivalence	40
5.5. Polynomial functors	43
6. Coherence of norms	47
6.1. Functoriality on the category of spans	47
6.2. Normed ∞ -categories	50
7. Normed motivic spectra	57
7.1. Categories of normed spectra	57

7.2. Cohomology theories represented by normed spectra	63
8. The norm-pullback-pushforward adjunctions	69
8.1. The norm-pullback adjunction	70
8.2. The pullback-pushforward adjunction	75
9. Spectra over profinite groupoids	77
9.1. Profinite groupoids	78
9.2. Norms in stable equivariant homotopy theory	81
10. Norms and Grothendieck's Galois theory	87
10.1. The profinite étale fundamental groupoid	87
10.2. Galois-equivariant spectra and motivic spectra	89
10.3. The Rost norm on Grothendieck-Witt groups	92
11. Norms and Betti realization	95
11.1. A topological model for equivariant homotopy theory	95
11.2. The real Betti realization functor	97
12. Norms and localization	101
12.1. Inverting Picard-graded elements	101
12.2. Inverting elements in normed spectra	104
12.3. Completion of normed spectra	107
13. Norms and the slice filtration	111
13.1. The zeroth slice of a normed spectrum	111
13.2. Applications to motivic cohomology	114
13.3. Graded normed spectra	117
13.4. The graded slices of a normed spectrum	121
14. Norms of cycles	123
14.1. Norms of presheaves with transfers	123
14.2. The Fulton-MacPherson norm on Chow groups	126
14.3. Comparison of norms	129
15. Norms of linear ∞-categories	137
15.1. Linear ∞ -categories	137
15.2. Noncommutative motivic spectra and homotopy K-theory	141
15.3. Nonconnective K-theory	148
16. Motivic Thom spectra	151
16.1. The motivic Thom spectrum functor	151
16.2. Algebraic cobordism and the motivic J-homomorphism	155
16.3. Multiplicative properties	157
16.4. Free normed spectra	163
16.5. Thom isomorphisms	165
A. The Nisnevich topology	169
B. Detecting effectivity	173

C. Categories of spans	177
C.1. Spans in extensive ∞ -categories	177
C.2. Spans and descent	183
C.3. Functoriality of spans	188
D. Relative adjunctions	191
Table of notation	195
Bibliography	199
