

# CONTENTS

<b>1. Introduction</b> .....	1
1.1. The conjecture .....	1
1.2. The program .....	5
1.3. Parabolic version .....	6
1.4. Our results .....	8
<b>2. Parabolic objects</b> .....	15
2.1. Parabolic bundles and Higgs bundles .....	15
2.2. Parabolic Chern classes .....	19
2.3. Natural operations .....	19
2.4. Stability .....	25
<b>3. Moduli Spaces</b> .....	29
3.1. A family of moduli problems .....	30
3.2. Birational models and chambers .....	32
3.3. The GIT construction .....	36
<b>4. The Hecke correspondence</b> .....	55
4.1. Hecke correspondences of moduli stacks and moduli spaces .....	55
4.2. The Hecke correspondence on $X$ .....	57
<b>5. The modular spectral cover</b> .....	69
5.1. The fiber of the Hitchin map .....	69
5.2. The base locus .....	72
5.3. The case of nilpotent residues .....	76
5.4. Wobbly, shaky and exceptional loci .....	83
<b>6. Hecke eigensheaves</b> .....	89
6.1. Parabolic divisors .....	89
6.2. Consistent labeling .....	91
6.3. Parabolic Hecke data .....	94
6.4. The eigensheaf property .....	104
6.5. Abelianization .....	109
6.6. Linear equivalence conditions .....	124
<b>7. Solving the constraints</b> .....	131
7.1. Chern characters .....	131
7.2. Parabolic Chern characters .....	133

7.3. Killing the Chern classes .....	138
7.4. Hecke conditions .....	138
7.5. The class of the kernel .....	142
7.6. The Okamoto map .....	152
<b>8. Summary .....</b>	<b>159</b>
<b>Appendix. TDO and the tamely ramified GLC .....</b>	<b>163</b>
A.1. Setup for the tamely ramified GLC .....	163
A.2. The non-abelian Hodge theory approach .....	166
A.3. Twisted Deligne-Goresky-MacPherson extensions .....	171
A.4. Remarks on untwisting .....	176
A.5. Geometric class field theory revisited .....	178
<b>Bibliography .....</b>	<b>181</b>
<b>List of notations .....</b>	<b>187</b>
<b>Index .....</b>	<b>189</b>
