

# CONTENTS

<b>Introduction</b> .....	1
Acknowledgments .....	4
<b>Part I. Microlocal theory of sheaves</b> .....	5
<b>I.1. Notations</b> .....	7
<b>I.2. Microsupport</b> .....	11
I.2.1. Definition and first properties .....	11
I.2.2. Functorial operations .....	13
I.2.3. Constructibility .....	17
<b>I.3. Sato's microlocalization</b> .....	21
<b>I.4. Simple sheaves</b> .....	25
<b>I.5. Composition of sheaves</b> .....	29
<b>Part II. Sheaves associated with Hamiltonian isotopies</b> .....	31
<b>II.1. Homogeneous case</b> .....	33
<b>II.2. Local behavior</b> .....	37
<b>II.3. Non homogeneous case</b> .....	41
<b>Part III. Cut-off lemmas</b> .....	43
<b>III.1. Global cut-off</b> .....	45
<b>III.2. Local cut-off—special case</b> .....	53
<b>III.3. Local cut-off—general case</b> .....	59
<b>III.4. Cut-off and <math>\gamma</math>-topology</b> .....	61
<b>III.5. Remarks on projectors—Tamarkin projector</b> .....	63
<b>Part IV. Constructible sheaves in dimension 1</b> .....	67
<b>IV.1. Gabriel's theorem</b> .....	69

IV.2. Constructible sheaves on the real line .....	71
IV.3. Constructible sheaves on the circle .....	75
IV.4. Cohomological dimension 1 .....	79
Part V. Graph selectors .....	81
Part VI. The Gromov nonsqueezing theorem .....	85
VI.1. Cut-off in fiber and space directions .....	87
VI.2. Nonsqueezing results .....	95
VI.2.1. Invariance of the displacement energy .....	95
VI.2.2. Nonsqueezing for a flying saucer .....	96
VI.2.3. Nonsqueezing for $L_0$ .....	97
VI.2.4. Nonsqueezing for the ball .....	98
Part VII. The Gromov-Eliashberg theorem .....	101
VII.1. The involutivity theorem .....	103
VII.2. Approximation of symplectic maps .....	105
VII.3. Degree of a continuous map .....	107
VII.4. The Gromov-Eliashberg theorem .....	109
Part VIII. The three cusps conjecture .....	113
VIII.1. Examples .....	117
VIII.2. Simple sheaf at a generic tangent point .....	121
VIII.2.1. Local cohomology .....	121
VIII.2.2. Generic tangent point—notations and hypotheses .....	122
VIII.2.3. Local study around $C_0$ .....	124
VIII.3. Microlocal linked points .....	133
VIII.4. Examples of microlocal linked points .....	139
VIII.5. Generic tangent point—global study .....	143
VIII.6. Front with one cusp .....	147
VIII.7. Proof of the three cusps conjecture .....	151
VIII.8. The four cusps conjecture .....	155
Part IX. Triangulated orbit categories for sheaves .....	161

<b>IX.1. Definition of triangulated orbit categories</b> .....	163
Quick reminder on localization .....	163
Definition of the orbit category .....	165
Internal tensor product and homomorphism .....	167
Morphisms in the triangulated orbit category .....	168
Direct sums .....	171
Direct and inverse images .....	171
<b>IX.2. Microsupport in the triangulated orbit categories</b> .....	175
IX.2.1. Definition and first properties .....	175
IX.2.2. Functorial behavior .....	177
IX.2.3. Microsupport in the zero section .....	178
<b>Part X. The Kashiwara-Schapira stack</b> .....	181
<b>X.1. Definition of the Kashiwara-Schapira stack</b> .....	183
Link with microlocalization .....	184
<b>X.2. Simple sheaves</b> .....	187
<b>X.3. Obstruction classes</b> .....	189
<b>X.4. The Kashiwara-Schapira stack for orbit categories</b> .....	191
<b>X.5. Microlocal germs</b> .....	193
<b>X.6. Monodromy morphism</b> .....	199
<b>Part XI. Convolution and microlocalization</b> .....	207
<b>XI.1. The functor <math>\Psi</math></b> .....	209
<b>XI.2. Adjunction properties</b> .....	217
<b>XI.3. Link with microlocalization</b> .....	219
<b>XI.4. Doubled sheaves</b> .....	225
<b>Part XII. Quantization</b> .....	239
<b>XII.1. Quantization for the doubled Legendrian</b> .....	241
<b>XII.2. The triangulated orbit category case</b> .....	245
<b>XII.3. Translation of the microsupport</b> .....	247
<b>XII.4. Restriction at infinity</b> .....	251
<b>Part XIII. Exact Lagrangian submanifolds in cotangent bundles</b> .....	255
<b>XIII.1. Fundamental groups</b> .....	257

<b>XIII.2. Vanishing of the Maslov class</b> .....	259
<b>XIII.3. Restriction at infinity</b> .....	263
<b>XIII.4. Vanishing of the second obstruction class</b> .....	265
<b>XIII.5. Homotopy equivalence</b> .....	267
<b>Bibliography</b> .....	271
