

CONTENTS

1. Introduction	1
1.1. Rotator models and the spin wave picture	1
1.2. Strategy of the proof	6
1.3. Organization of the paper	14
2. Preliminaries	17
2.1. Notation and assumptions	17
2.2. Convention for constants and exponents	23
3. Duality and Helffer-Sjöstrand representation	25
3.1. From Villain model to solid on solid model	25
3.2. Brascamp-Lieb inequality	34
3.3. Thermodynamic limit	39
3.4. The Helffer-Sjöstrand representation	47
4. First-order expansion of the two-point function: Overview of the proof	59
4.1. Preliminary notation	60
4.2. Removing the terms $X_{\sin \cos}$, $X_{\cos \cos}$ and $X_{\sin \sin}$	61
4.3. Removing the contributions of the cosines	63
4.4. Decoupling the exponentials	65
4.5. First order expansion of the two-point function	68
5. Regularity theory for low temperature dual Villain model	79
5.1. Caccioppoli inequality for the solutions of the Helffer-Sjöstrand equation	80
5.2. Regularity theory for the Helffer-Sjöstrand operator	81
5.3. Nash-Aronson estimate and regularity theory for heat kernels	87
5.4. Definition and regularity for the second-order Helffer-Sjöstrand operator	89
6. Quantitative convergence of the subadditive quantities	95
6.1. Definition of the subadditive quantities and basic properties	96
6.2. Subadditivity for the energy quantities	103
6.3. Quantitative convergence of the subadditive quantities	108
6.4. Definition of the first-order corrector and quantitative sublinearity ..	128
7. Quantitative homogenization of the Green's matrix	137
7.1. Statement of the main result	137

7.2. Outline of the argument	138
7.3. Two-scale expansion and homogenization of the gradient of the Green's matrix	142
7.4. Homogenization of the mixed derivative of the Green's matrix	161
8. First-order expansion of the two-point function: Technical lemmas	171
8.1. Removing the terms $X_{\sin \cos}$, $X_{\cos \cos}$ and $X_{\sin \sin}$	171
8.2. Removing the contributions of the cosines	176
8.3. Decoupling the exponentials	179
8.4. Using the symmetry and rotation invariance of the dual Villain model	186
8.5. Treating the error term \mathcal{E}_{q_1, q_2}	188
A. List of notation and preliminary results	191
A.1. Notation and assumptions	191
A.2. Discrete differential forms	198
B. Multiscale Poincaré inequality	207
C. Basic estimates on discrete convolutions	209
Bibliography	211
