Introduction	1
Summary of results	3
Outline	8
Acknowledgments	9
1. Background and recollections	11
1.1. Colored (co)operads and (co)modules	11
1.2. Operads over spaces and right multimodules	13
1.3. A note on the cohomology of compact orientable manifolds with boundary	14
2. Poincaré-Lefschetz duality models	17
2.1. Motivation	17
2.2. Definition and existence	18
2.3. Diagonal classes	22
3. Configuration spaces, their compactifications, and algebraic structures	25
3.1. Semi-algebraic realization	25
3.2. (Axelrod-Singer-)Fulton-MacPherson operad FM_n	25
3.3. Fiberwise little n -disks operad	26
3.4. Compactified configuration space for closed manifolds	27
3.5. Swiss Cheese operad and fiberwise Swiss Cheese operad	28
3.6. Compactified configuration space for manifolds with boundary	28
3.7. Compactified configuration spaces and actions	30
3.8. Comparison of compactifications: configuration spaces of two points	31
4. Construction of propagators	35
4.1. The propagator for closed manifolds	35
4.2. Diagonal data	36
4.3. The propagator on SFM_M	38
4.4. The propagator for aFM_N	40
4.5. The propagator for mFM_M	41
5. Graphical models—recollections	45
5.1. Models for the little disks and Swiss-Cheese operads	45
5.2. Graph complexes GC_n and SGC_n	48
5.3. Model for configuration spaces of closed manifolds	49
5.4. Functoriality of the models	51

5.5. Model for the fiberwise little n -disks operad	53
5.6. The local Maurer-Cartan element I	55
6. A model for SFM_M	59
6.1. The local Maurer-Cartan element II and models for the fiberwise Swiss-Cheese operad	59
6.2. Colored labeled graphs	63
6.3. Cohomology and quasi-isomorphism theorem	69
6.4. Small model and canonical combinatorial model	73
6.5. The global Maurer-Cartan element and homotopy invariance	74
7. A model for mFM_M and $\text{aFM}_{\partial M}$	79
7.1. Graphical models $\text{aGraphs}_{A_\partial}$ and mGraphs_A	79
7.2. The Maurer-Cartan element	81
7.3. Cohomology, and proof of quasi-isomorphism property	83
8. Relation and small models for “good” spaces	87
8.1. The dg-module model of $\text{Conf}_k(M)$	87
8.2. Computing the homology	88
8.3. The perturbed model	93
8.4. The connection between $\text{SGraphs}_{A,A_\partial}$ and mGraphs_A	95
8.5. Comparison with the perturbed model and proof of Theorem E	97
Cohomology of some graph complexes	101
A.1. Directed and undirected graph complexes	101
A.2. Decorated graph complex	103
A.3. Decorated M -relative graph complex	104
A.4. The cohomology of KGC_n	106
A.5. The cohomology of aGC_{A_∂}	110
A.6. The cohomology of mGC_A	111
A.7. The cohomology of KGC_M	114
