INTRODUCTION	1
CHAPTER 1—THE THREE GREEK PROBLEMS	
1.1 Constructible Lengths . . . . .	9
1.2 Doubling the Cube . . . . .	24
1.3 Trisecting the Angle . . . . .	26
1.4 Squaring the Circle . . . . .	31
1.5 Polynomials and Their Roots . . . . .	33
1.6 Symmetric Functions . . . . .	39
1.7 The Transcendence of $\pi$ . . . . .	47
References and Notes . . . . .	57
CHAPTER 2—FIELD EXTENSIONS	
2.1 Arithmetic of Polynomials . . . . .	59
2.2 Simple, Multiple, and Finite Extensions . . . . .	71
2.3 Geometric Constructions Revisited . . . . .	80
2.4 Roots of Complex Numbers . . . . .	84
2.5 Constructibility of Regular Polygons I. . . . .	92
2.6 Congruences . . . . .	98
2.7 Constructibility of Regular Polygons II . . . . .	104
References and Notes . . . . .	119
CHAPTER 3—SOLUTION BY RADICALS	
3.1 Statement of the Problem . . . . .	123
3.2 Automorphisms and Groups . . . . .	127
3.3 The Group of an Extension . . . . .	136
3.4 Two Fundamental Theorems . . . . .	141
3.5 Galois' Theorem . . . . .	151

3.6 Abel's Theorem . . . . .	166
3.7 Some Solvable Equations . . . . .	174
References and Notes . . . . .	177
CHAPTER 4—POLYNOMIALS WITH SYMMETRIC GROUPS	
4.1 Background Information . . . . .	181
4.2 Hilbert's Irreducibility Theorem . . . . .	198
4.3 Existence of Polynomials over $\mathbf{Q}$ with Group $S_n$ . . . . .	210
References and Notes . . . . .	219
SOLUTIONS TO THE PROBLEMS . . . . .	221
INDEX . . . . .	319
