

TABLE OF CONTENTS

CHAPTER	PAGE
I. ORIGIN AND APPLICATIONS OF THE THEORY	1
1. The development of the idea of analytic functions	
2. The usefulness of the theory	
3. Founders of the theory	
II. COMPLEX NUMBERS	6
4. Elementary operations with complex numbers	
5. Geometric representation	
6. Root extraction	
7. Summary; fundamental inequalities	
8. References	
III. REAL FUNCTIONS OF REAL VARIABLES	18
9. Functions of a real variable	
10. Limits	
11. Continuous functions	
12. Derivatives and integrals	
13. Functions of two variables	
14. Double integrals	
15. Curve integrals	
16. Green's lemma	
17. Integrals independent of the path	
18. Implicit functions	
19. References	
IV. COMPLEX FUNCTIONS THAT HAVE DERIVATIVES	43
20. Functions and limits	
21. Necessary conditions for the existence of a derivative	
22. Sufficient conditions	
23. The exponential function	
24. Trigonometric functions	
25. The logarithmic function	
26. References	
V. APPLICATIONS IN GEOMETRY AND PHYSICS	60
27. Conformal mapping	
28. Preservation of angles	

CHAPTER	PAGE
29. Linear transformations	
30. Transformations corresponding to power functions	
31. Transformations corresponding to other elementary functions	
32. Two-dimensional fluid motion	
33. Other physical applications	
34. References	
VI. INTEGRALS OF ANALYTIC FUNCTIONS	83
35. Indefinite and definite integrals	
36. Formulas for definite integrals	
37. Remarks concerning the evaluation of complex integrals	
38. Cauchy's integral theorem	
39. Cauchy's integral formula	
40. Some immediate consequences of Cauchy's integral formula	
41. Taylor's theorem with remainder	
42. References	
VII. INFINITE SERIES	106
43. Convergence and divergence	
44. Power series	
45. Operations with infinite series	
46. Series whose terms are continuous functions; uniform convergence	
47. Integration and differentiation of uniformly convergent series	
48. Taylor's and Maclaurin's series	
49. Laurent's series	
50. References	
VIII. SINGULARITIES OF SINGLE-VALUED ANALYTIC FUNCTIONS	131
51. Isolated singularities	
52. Poles	
53. Essential singular points	
54. Singularities at infinity	
55. Non-isolated singularities	
56. Definitions of functions in terms of their singularities	
57. References	

TABLE OF CONTENTS

ix

CHAPTER	PAGE
IX. ANALYTIC CONTINUATION. MANY-VALUED ANALYTIC FUNCTIONS	147
58. Questions regarding the identity of two analytic func- tions	
59. Analytic continuation	
60. The method of overlapping circles	
61. Monogenic analytic functions	
62. The permanence of functional equations	
63. Branches and branch-points of many-valued analytic functions	
64. The monodromic group	
65. Monodromic groups of linear differential equations	
66. Riemann surfaces	
67. A theorem regarding algebraic functions	
68. References
