<b>Foreword</b>	<b>xiii</b>
<b>Preface</b>	<b>xv</b>
<b>1 Background Ideas and Knowledge</b>	<b>1</b>
1.1 Dynamical systems, iteration and orbits . . . . .	1
1.2 Information loss and randomness in dynamical systems .	4
1.3 Assumed knowledge and notation . . . . .	10
Appendix: Mathematical reasoning and proof . . . . .	12
Exercises . . . . .	17
Investigations . . . . .	19
Notes . . . . .	19
Bibliography . . . . .	22
<b>2 Irrational Numbers and Dynamical Systems</b>	<b>25</b>
2.1 Introduction: irrational numbers and the infinite . . . . .	25
2.2 Fractional parts and points on the unit circle . . . . .	28
2.3 Partitions and the Pigeon-hole Principle . . . . .	33
2.4 Kronecker's Theorem . . . . .	34
2.5 The dynamical systems approach to Kronecker's Theorem	41
2.6 Kronecker and chaos in the music of Steve Reich . . . . .	46
2.7 The ideas in Weyl's Theorem on irrational numbers . . . . .	52
2.8 The proof of Weyl's Theorem . . . . .	57
2.9 Chaos in Kronecker systems . . . . .	70
Exercises . . . . .	75

Investigations . . . . . 80

Notes . . . . . 83

Bibliography . . . . . 85

**3 Probability and Randomness 87**

3.1 Introduction: probability, coin tossing and randomness . . 87

3.2 Expansions to a base . . . . . 92

3.3 Rational numbers and periodic expansions . . . . . 101

3.4 Sets, events, length and probability . . . . . 106

3.5 Sets of measure zero . . . . . 117

3.6 Independent sets and events . . . . . 122

3.7 Typewriters, recurrence, and the Prince of Denmark . . . 125

3.8 The Rademacher functions . . . . . 136

3.9 Randomness, binary expansions and a law of averages . . 142

3.10 The dynamical systems approach . . . . . 148

3.11 The Walsh functions . . . . . 158

3.12 Normal numbers and randomness . . . . . 163

3.13 Notions of probability and randomness . . . . . 173

3.14 The curious phenomenon of the leading significant digit . 180

3.15 Leading digits and geometric sequences . . . . . 186

3.16 Multiple digits and a result of Diaconis . . . . . 193

3.17 Dynamical systems and changes of scale . . . . . 198

3.18 The equivalence of Kronecker and Benford systems . . . 205

3.19 Scale invariance and the necessity of Benford’s law . . . 208

Exercises . . . . . 220

Investigations . . . . . 225

Notes . . . . . 227

Bibliography . . . . . 230

**4 Recurrence 235**

4.1 Introduction: random systems and recurrence . . . . . 235

4.2 Transformations that preserve length . . . . . 239

4.3 Poincaré recurrence . . . . . 248

4.4 Recurrent points . . . . . 253

4.5 Kac’s result on average recurrence times . . . . . 256

4.6	Applications to the Kronecker and Borel systems . . . . .	266
4.7	The standard deviation of recurrence times . . . . .	270
	Exercises . . . . .	283
	Investigations . . . . .	284
	Notes . . . . .	286
	Bibliography . . . . .	287
<b>5</b>	<b>Averaging in Time and Space</b>	<b>289</b>
5.1	Introduction: averaging in time and space . . . . .	289
5.2	Outer measure . . . . .	293
5.3	Invariant sets . . . . .	300
5.4	Measurable sets . . . . .	303
5.5	Measure-preserving transformations . . . . .	307
5.6	Poincaré recurrence ... again . . . . .	310
5.7	Ergodic systems . . . . .	312
5.8	Birkhoff's Theorem on time and space averages . . . . .	318
5.9	Weyl's Theorem from the ergodic viewpoint . . . . .	320
5.10	The Ergodic Theorem and expansions to an arbitrary base	323
5.11	Kac's recurrence formula: the general case . . . . .	327
5.12	Mixing transformations and an example of Kakutani . . .	328
5.13	Lüroth transformations and continued fractions . . . . .	333
	Exercises . . . . .	342
	Investigations . . . . .	345
	Notes . . . . .	346
	Bibliography . . . . .	347
	<b>Index of Subjects</b>	<b>351</b>
	<b>Index of Symbols</b>	<b>355</b>
	<b>About the Author</b>	<b>357</b>
