

Contents

Preface	vii
Part 1	1
Chapter 1 The Surprising Ellipse	3
Chapter 2 The Ellipse Three Ways	13
Chapter 3 Blaschke Products	23
Chapter 4 Blaschke Products and Ellipses	35
Chapter 5 Poncelet's Theorem for Triangles	47
Chapter 6 The Numerical Range	61
Chapter 7 The Connection Revealed	75
Intermezzo	85
Chapter 8 And Now for Something Completely Different... Benford's Law	87
Part 2	101
Chapter 9 Compressions of the Shift Operator: The Basics	103
Chapter 10 Higher Dimensions: Not Your Poncelet Ellipse	121
Chapter 11 Interpolation with Blaschke Products	133
Chapter 12 Poncelet's Theorem for n-Gons	147

Chapter 13 Kippenhahn’s Curve and Blaschke’s Products	159
Chapter 14 Iteration, Ellipses, and Blaschke Products	177
On Surprising Connections	195
Part 3	199
Chapter 15 Fourteen Projects for Fourteen Chapters	201
15.1 Constructing Great Ellipses	201
15.2 What’s in the Envelope?	201
15.3 Sendov’s Conjecture	206
15.4 Generalizing Steiner Inellipses	210
15.5 Steiner’s Porism and Inversion	213
15.6 The Numerical Range and Radius	222
15.7 Pedal Curves and Foci	224
15.8 The Power of Positivity	228
15.9 Similarity and the Numerical Range	231
15.10 The Importance of Being Zero	234
15.11 Building a Better Interpolant	237
15.12 Foci of Algebraic Curves	241
15.13 Companion Matrices and Kippenhahn	245
15.14 Denjoy–Wolff Points and Blaschke Products	251
Bibliography	255
Index	263
