

## TABLE OF CONTENTS

CHAPTER	PAGE
<b>I. INTRODUCTORY CONCEPTIONS</b> .....	1
1. Perspective drawing	
2. Projection and section. Correspondence	
3. Projective transformations	
4. A projective theorem	
<b>II. PROJECTIVE SPACE. THE PRINCIPLE OF DUALITY</b> .....	11
5. Ideal elements	
6. The projective plane	
7. Projective space	
8. The principle of duality	
9. Elementary figures	
<b>III. DESARGUES' THEOREM. HARMONIC SETS</b> .....	31
10. The Desargues Configuration	
11. The fundamental theorem on quadrangular sets	
12. Harmonic sets	
<b>IV. PROJECTIVITIES IN ONE-DIMENSIONAL FORMS. THE FUNDAMENTAL THEOREM</b> .....	40
13. The one-dimensional primitive forms in the plane	
14. Theorems on projectivities	
15. Axis of homology	
16. Double elements. Elliptic, parabolic, and hyperbolic projectivities	
17. Involutions	
<b>V. THE PASCAL AND BRIANCHON THEOREMS</b> .....	62
18. Definition of point conic and line conic	
19. The construction of a point conic from the definition	
20. Pascal's theorem	
21. The construction of the point conic through five given points	

CHAPTER	PAGE
22. Brianchon's Theorem	68
23. Tangents. Points of contact	
24. Special cases of Pascal's theorem	
25. The tangents to a point conic form a line conic	
26. Pole and polar with respect to a conic	
27. The polar system of a conic	
28. Conjugate points. Conjugate lines	
29. The principle of duality in a plane	
 VI. METRIC PROPERTIES.....	 81
30. Projective and metric properties	
31. Parallel lines. Midpoint	
32. The classification of conics	
33. Perpendicular lines. The orthogonal involution	
34. Angle bisectors	
35. Axes of a conic	
36. Foci of a conic	
37. Metric property of an involution	
38. Construction of an involution by means of circles	
39. Construction of the foci of a central conic	
40. Metric definitions of a conic	
 VII. GROUPS OF PROJECTIVE TRANSFORMATIONS.....	 105
41. The symbolic representation of correspondences	
42. The concept of a group of transformations	
43. Two important groups of projectivities on a line	
44. The transformation of a correspondence	
45. Projective transformations of two-dimensional forms	
46. Groups of collineations in the plane	
 VIII. THE ALGEBRA OF POINTS AND THE INTRODUCTION OF ANALYTIC METHODS.....	 120
47. The addition of points on a line	
48. The multiplication of points on a line	
49. The distributive law	
50. The algebra of points on a line	
51. The analytic expression for a projectivity	
52. The cross ratio	
53. Projective correspondence between two different one- dimensional forms	

TABLE OF CONTENTS

ix

CHAPTER	PAGE
54. Point and line coordinates in the plane	134
55. The equation of a line	
56. Simultaneous point and line coordinates	
57. Homogeneous coordinates on the line and in the plane	
58. Pencils of points and lines	
59. The equation of a conic	
60. Collineations in a plane	
<b>IX. GROUPS AND GEOMETRIES . . . . .</b>	<b>151</b>
61. A geometry defined by a group of transformations	
62. The affine group. The affine geometry	
63. The group of translations	
64. Vectors	
65. The euclidean metric group. The euclidean metric geometry	
66. The rectangular coordinate system	
67. Analytic expression for the transformations of the euclidean group	
68. Displacements	
69. The circle	
70. Distance	
71. Length of arc of a circle	
72. Angle	
73. The non-euclidean geometries	
<b>INDEX . . . . .</b>	<b>181</b>
