Preface	ix
Introduction	xi
<b>Part 1. The three worlds</b>	<b>1</b>
Chapter 1. The tropics	3
1.1. Tropical hypersurfaces	3
1.2. Some background on fans	11
1.3. Parameterized tropical curves	13
1.4. Affine manifolds with singularities	19
1.5. The discrete Legendre transform	27
1.6. Tropical curves on tropical surfaces	30
1.7. References and further reading	32
Chapter 2. The A- and B-models	33
2.1. The A-model	33
2.2. The B-model	67
2.3. References and further reading	89
Chapter 3. Log geometry	91
3.1. A brief review of toric geometry	92
3.2. Log schemes	98
3.3. Log derivations and differentials	112
3.4. Log deformation theory	117
3.5. The twisted de Rham complex revisited	126
3.6. References and further reading	129
<b>Part 2. Example: <math>\mathbb{P}^2</math>.</b>	<b>131</b>
Chapter 4. Mikhalkin's curve counting formula	133
4.1. The statement and outline of the proof	133
4.2. Log world $\rightarrow$ tropical world	138
4.3. Tropical world $\rightarrow$ log world	143
4.4. Classical world $\rightarrow$ log world	157
4.5. Log world $\rightarrow$ classical world	165
4.6. The end of the proof	169
4.7. References and further reading	171
Chapter 5. Period integrals	173
5.1. The perturbed Landau-Ginzburg potential	173

5.2. Tropical descendent invariants	179
5.3. The main B-model statement	187
5.4. Deforming $Q$ and $P_1, \dots, P_k$	192
5.5. Evaluation of the period integrals	222
5.6. References and further reading	244
<b>Part 3. The Gross-Siebert program</b>	<b>245</b>
Chapter 6. The program and two-dimensional results	247
6.1. The program	247
6.2. From integral tropical manifolds to degenerations in dimension two	255
6.3. Achieving compatibility: The tropical vertex group	290
6.4. Remarks and generalizations	305
6.5. References and further reading	306
Bibliography	307
Index of Symbols	313
General Index	315
